Build-a-Snowman

Why not create your own freestanding snowman with changeable accessories for some wintery fun!

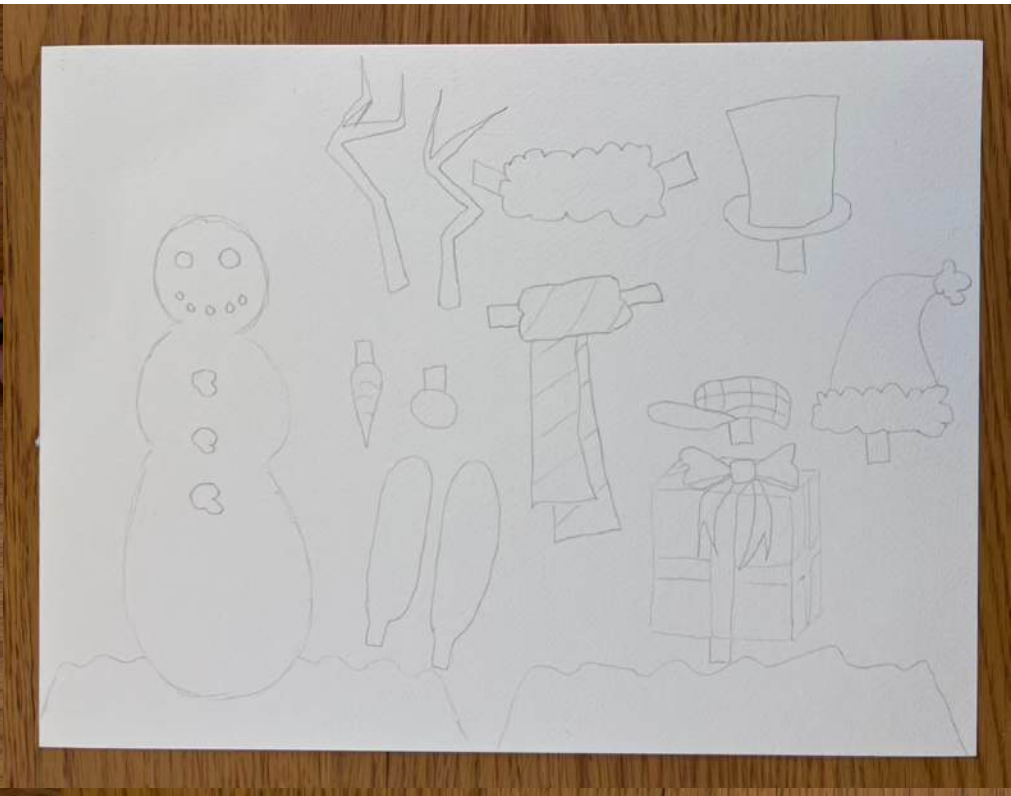

Tools and Materials:

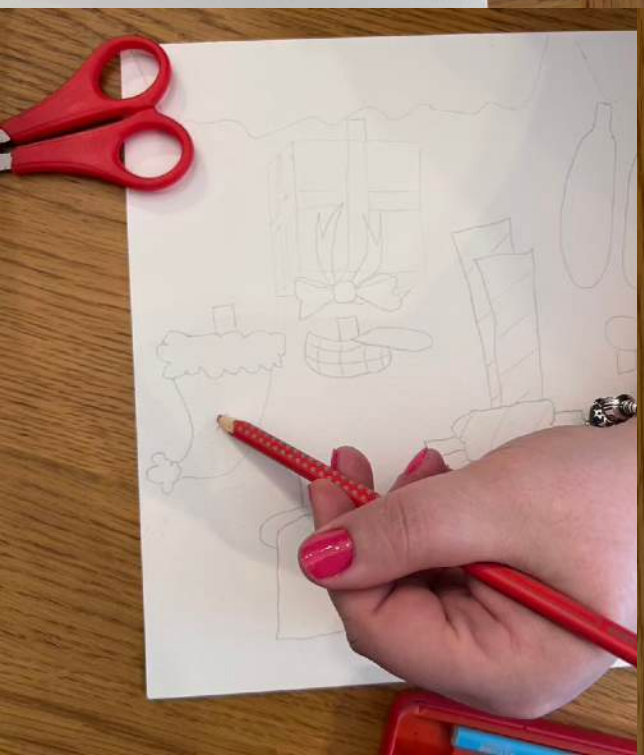

- Thick A3 Paper
- Pencil
- Colouring Pencils
- Scissors

We used A3 so we could fit in all the accessories - you can always use 2 sheets of A4 instead. The paper needs to be thick almost like card so it can stand up by itself, not printer paper! Start by sketching out the body of your snowman - leave a gap for snow underneath to create the stand - 2 straight bits to create a cross or X. Draw some accessories like arms, noses and hats and add tabs to them, little rectangles to attach through slits in the the snowman. Colour the elements in when happy with them

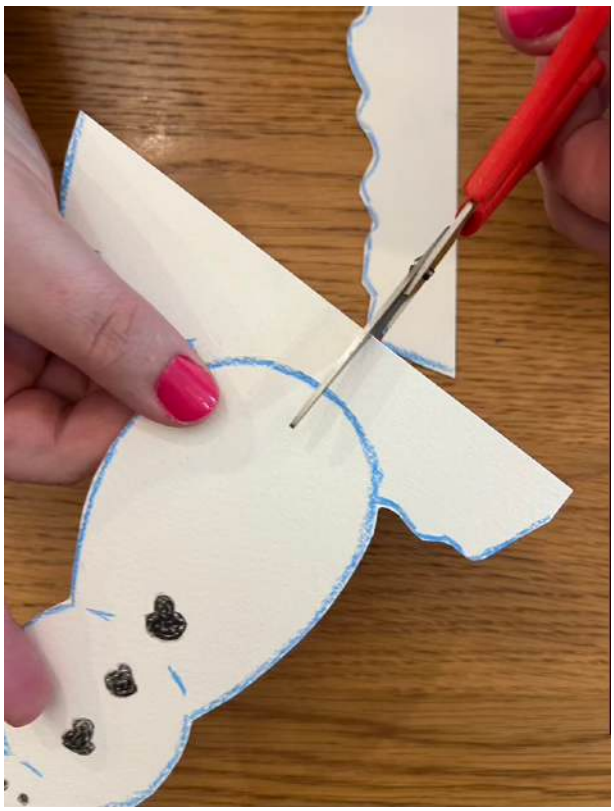

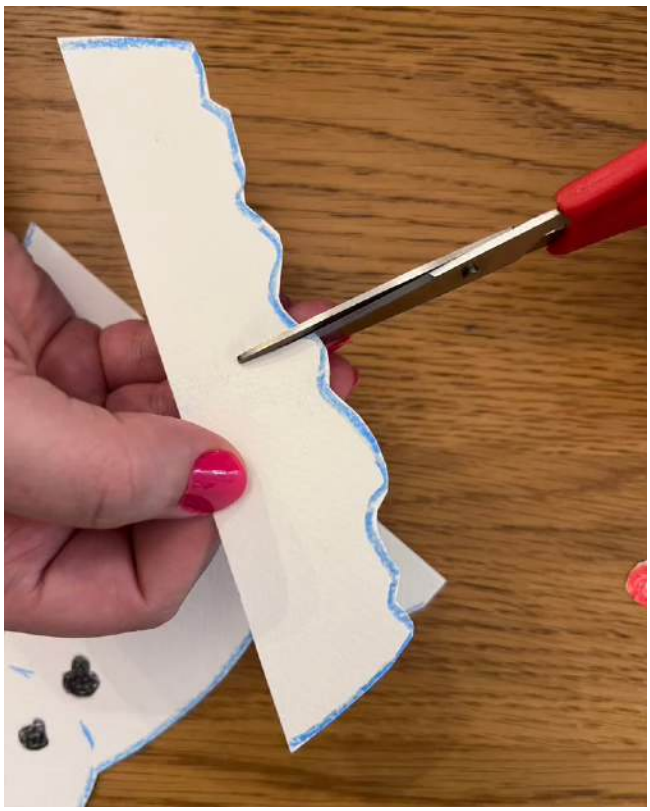

Once you have coloured in all the parts cut them out, be careful when cutting the tabs as you don't want to lose them!

To make the snowman stand cut up from the bottom of the snow to the base of his body, and then the separate bit of snow cut down from the wiggly surface to the straight bit like so, but them together in an X shape to get it to stand

Now to make the slots for accessories to fit in - using an open pair of scissors you can score a line, it would be a good idea to do this on top of a magazine or similar to protect the work surface. We made 1 for the nose, 2 for the arms, 1 for the hat and 1 at the bottom for the present, other things like the scarf attach from the tabs folding around

There you have it your very own “Build-a-Snowman”!

Here is another we made to inspire you!
