Egg Cress Head

Tools and Materials:

- Coloured Paper
- Pencil
- Black Felt Tip
- Sellotape
- Scissors
- Egg (and cup to crack it into)
- Cress Seeds
- Cotton Wool Ball

First thing first you will need to empty your egg, try and make a crack nearer the top - this is just so you have more space to draw a face on!

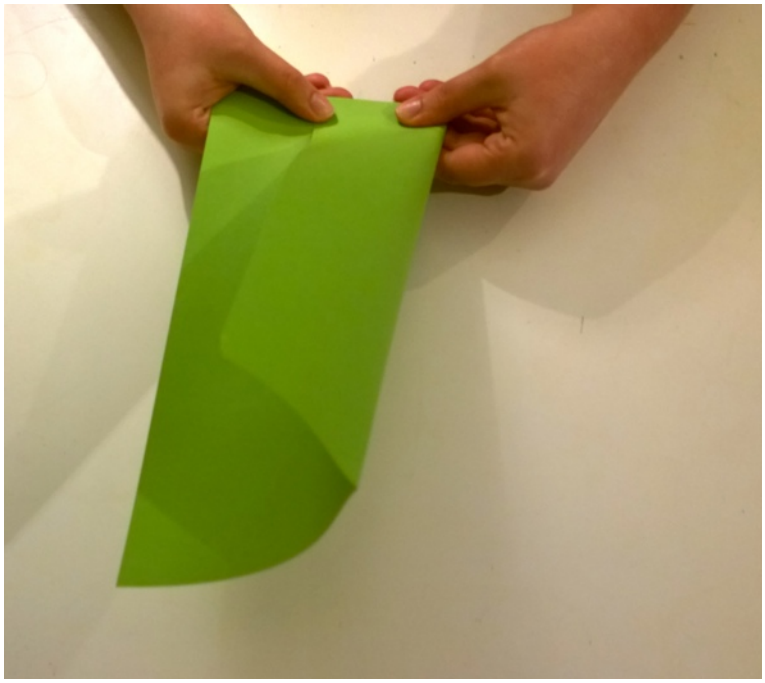

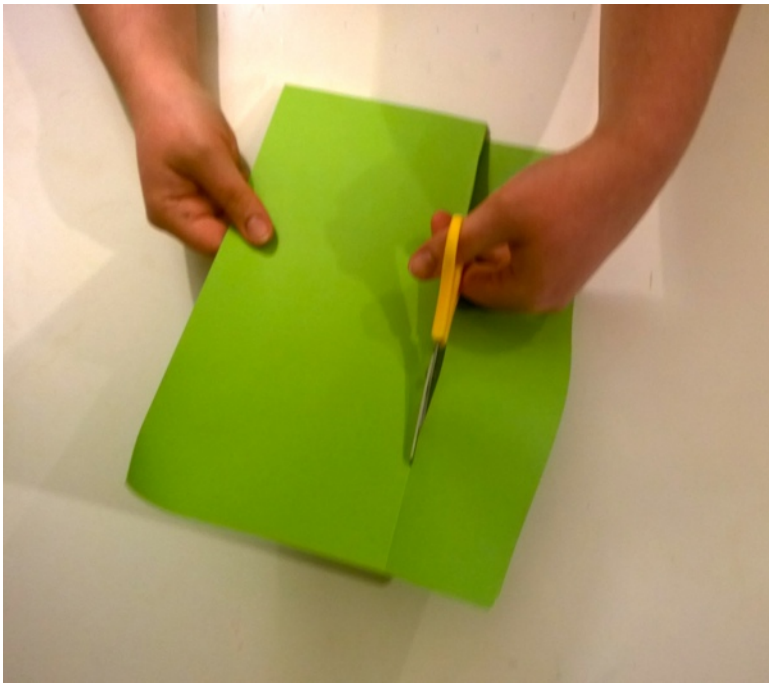

Don’t forget to wash the egg out afterwards you don’t want it to go mouldy

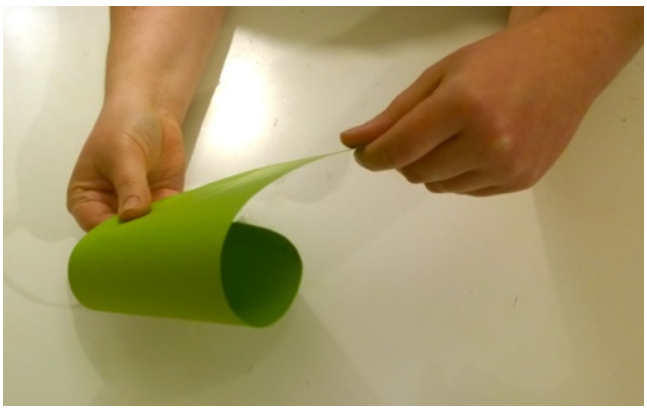

Now you get to create the body, you can make anything from person to animal - the possibilities are endless. To make the body trim down one of your sheets, ours is two thirds you don't want to make it too tall otherwise your egg head might fall off!

Roll the paper to figure what size the body needs to be, you want the egg to be able to sit in it but have enough of the face visible, once happy tape the body in place

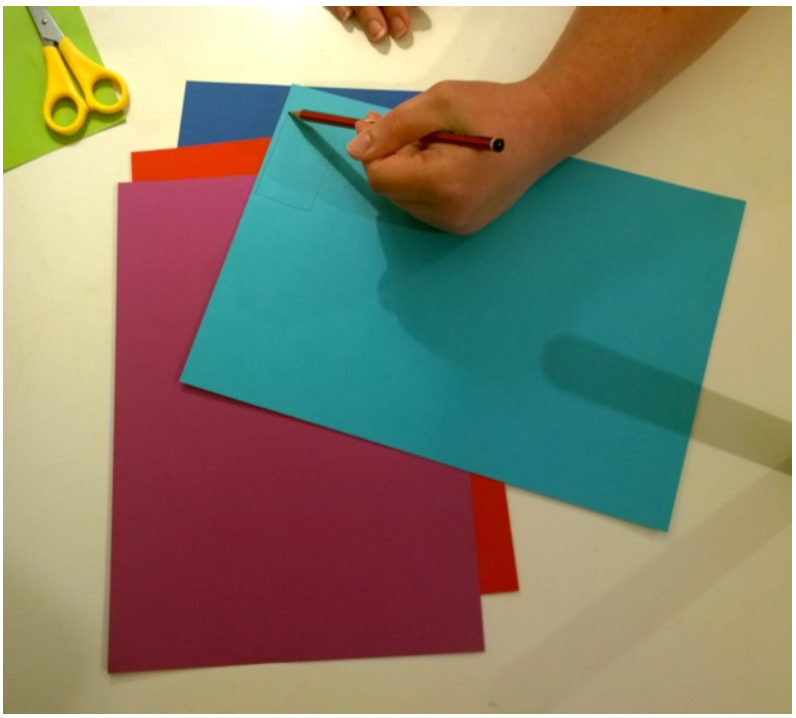

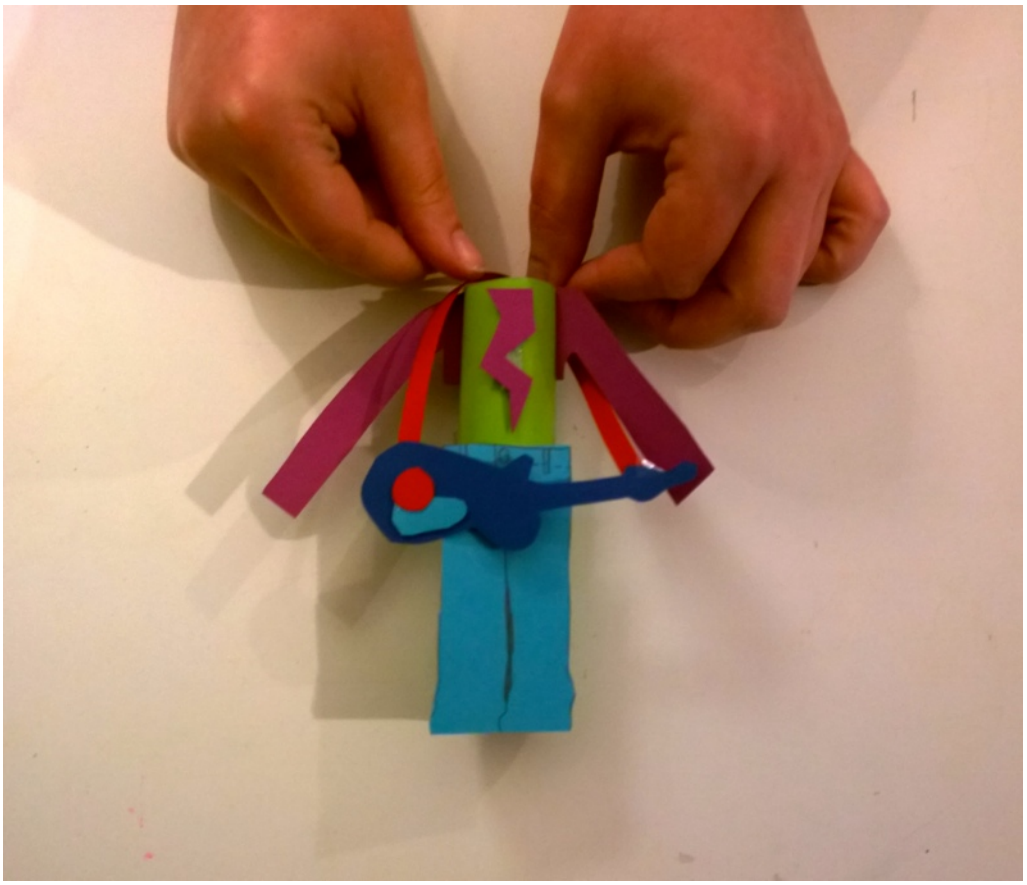

Now you can decorate the body - what does your character need? Legs, Arms - how many?

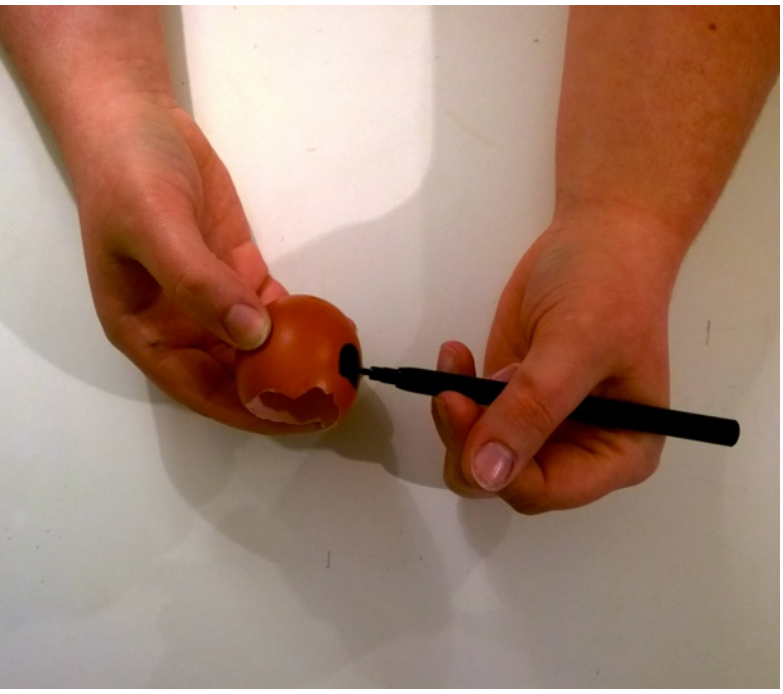

We used folded over sellotape to stick all of our elements on just to give it more of a 3D effect

Now draw on a face to match the body you have created, hold your egg gently so you don't break it, they are fragile!

Last thing to do is plant your egg cress head, place the cotton wool ball inside and dampen it with a little water. Place your seeds on the wool - you will need a small pinch then put on a little bit more water to help them grow!

And there you have your Egg Cress Head (after a few days they should sprout some hair!)
