Fanned Christmas Tree

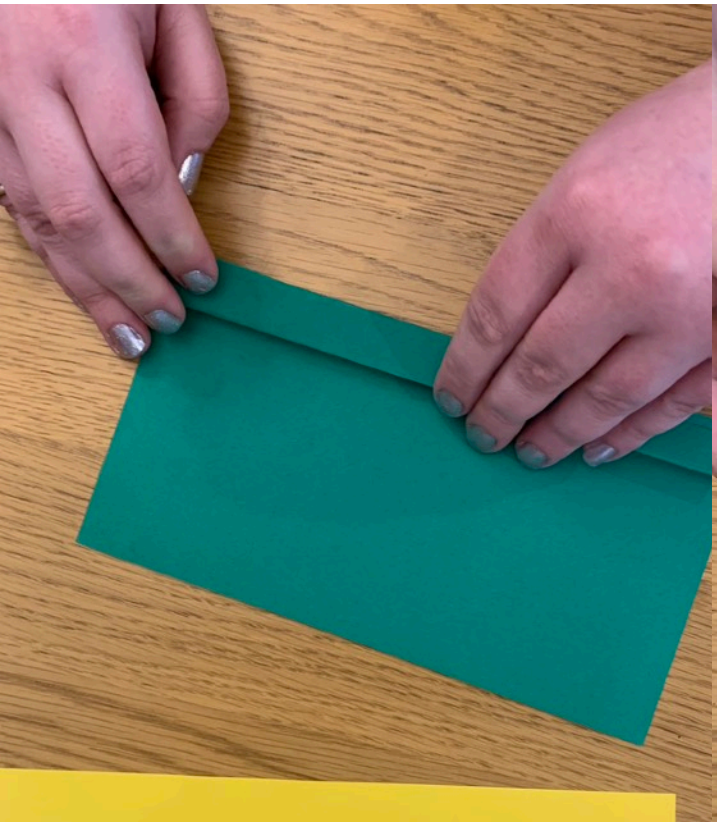

We’re a fan of the 3D paper craft Christmas Tree - great as a table decoration too! Keep it simple or add baubles galore fun Christmassy craft to get into the spirit!

Tools and Materials:

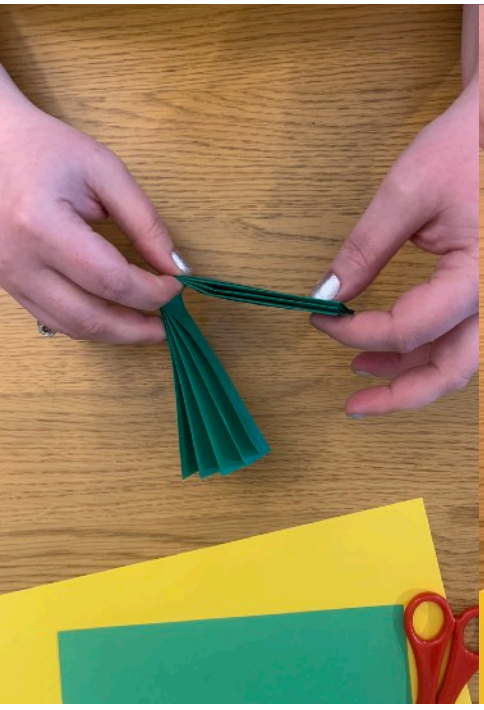

- Coloured Paper
- Sellotape
- Scissors

We chose to use 2 different greens for a bit of added fun, you can keep to one colour if you prefer and doesn't even have to be green! The bits of paper are A5 which is half of an A4 sheet, take one and start folding like a fan - alternating folds like so and bend in half when done then repeat with the other sheet

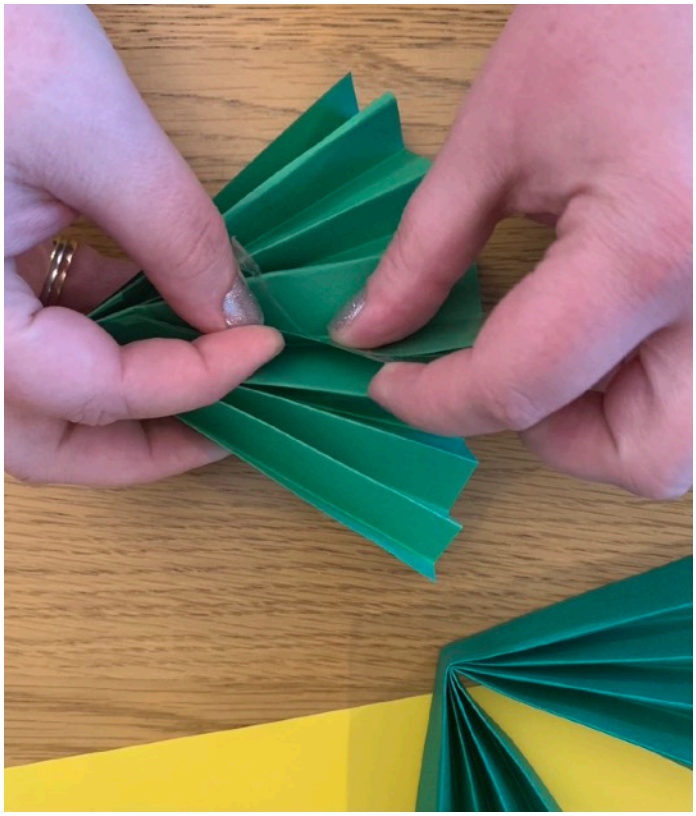

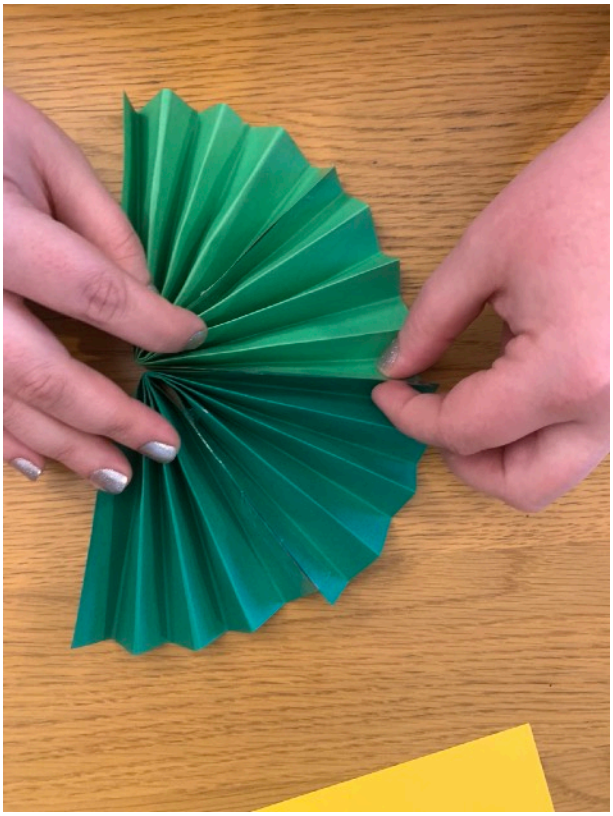

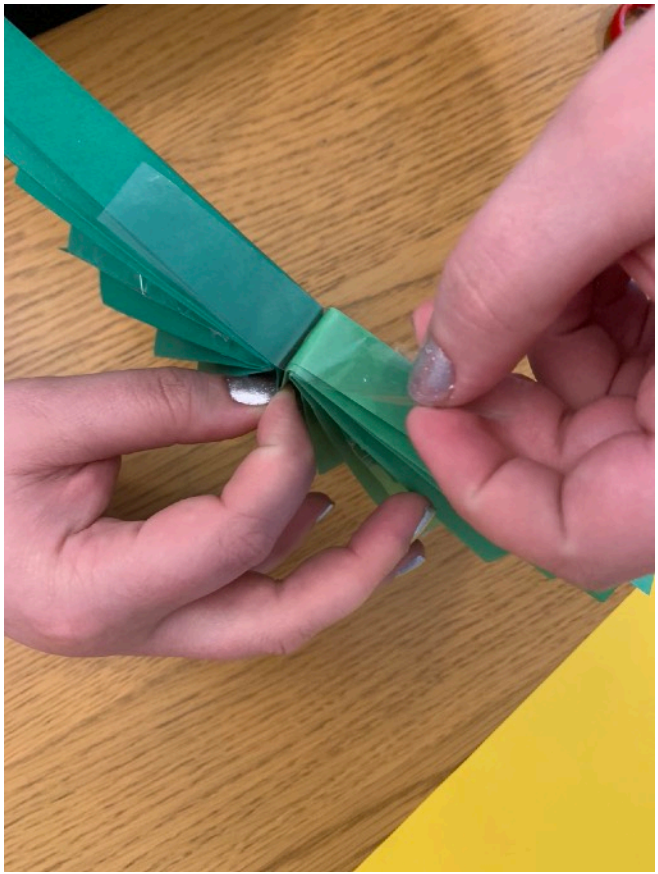

Taking one of the fans sellotape the middle together like so, then do the same with the other to secure it, then tape them both together to create your tree

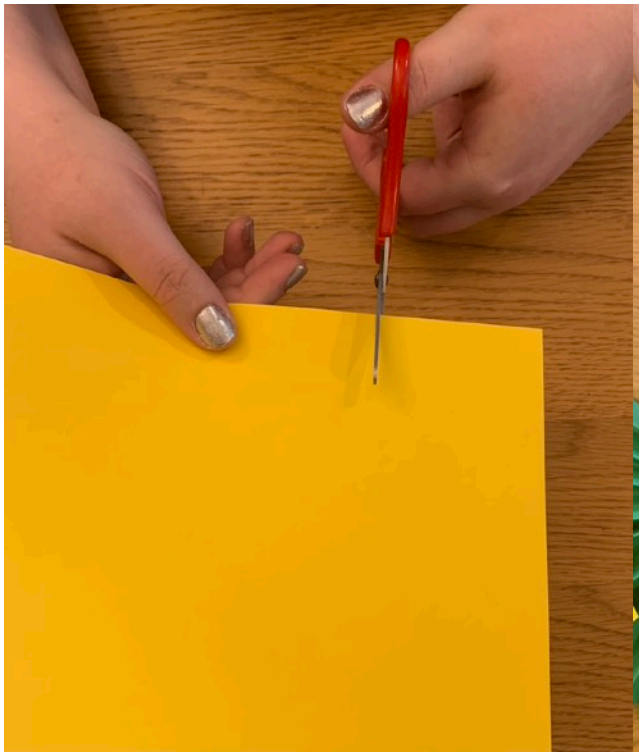

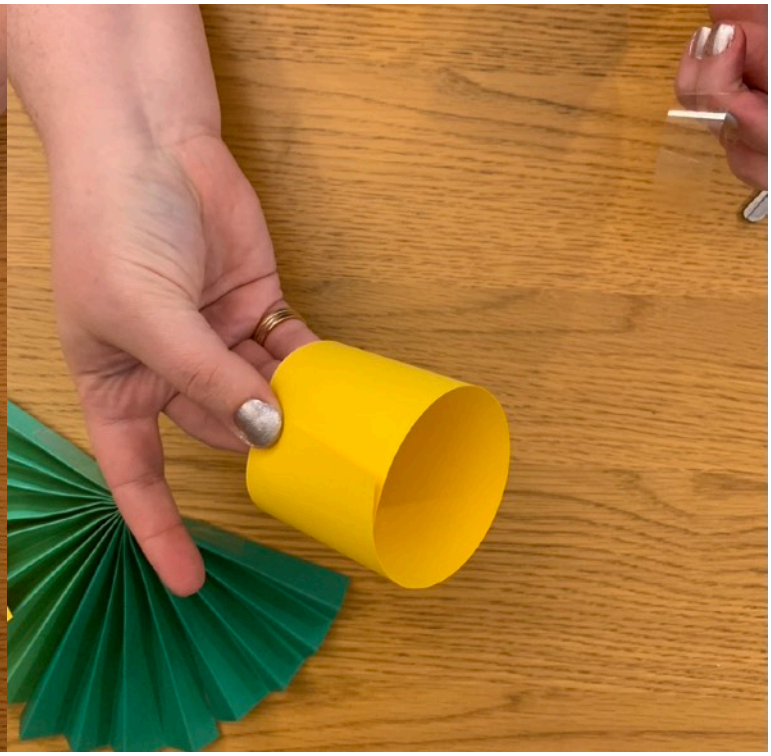

Once tapped in the middle you can also add some tape along the bottom, the flat side like so

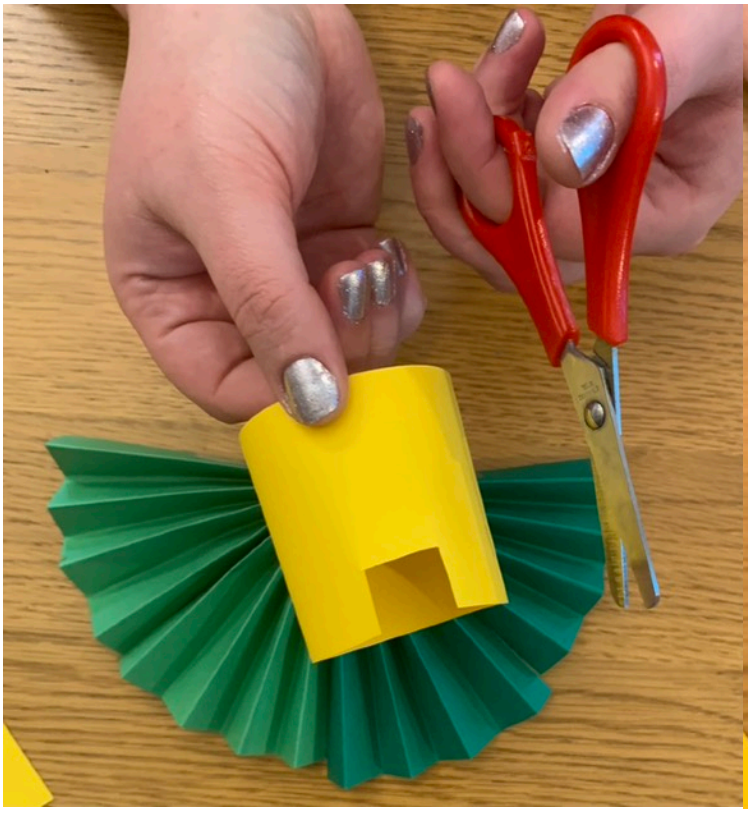

Now to create the stand for your tree - cut a strip off the short side of a bit of A4 paper roughly 5cm wide or so, whatever you think fits your tree. Bend the strip round then tape at the edges

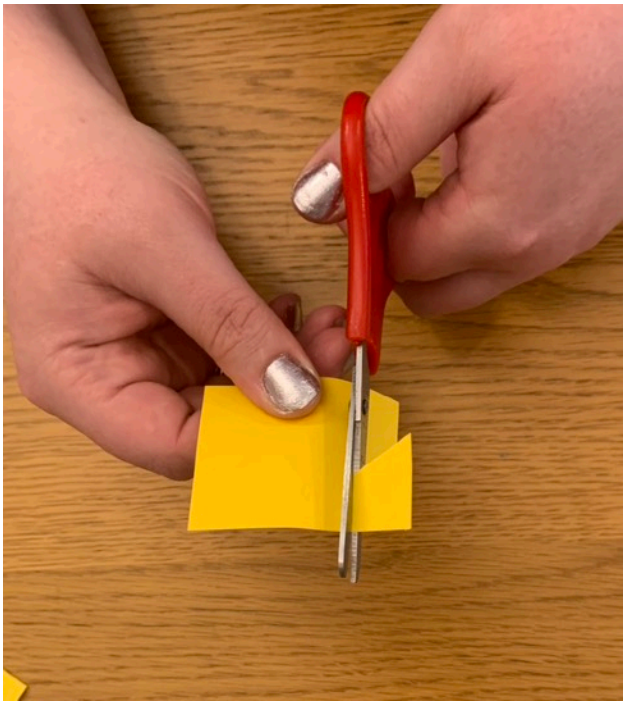

Once you have your stand cut 2 squares out the sides so the tree can slot in like so

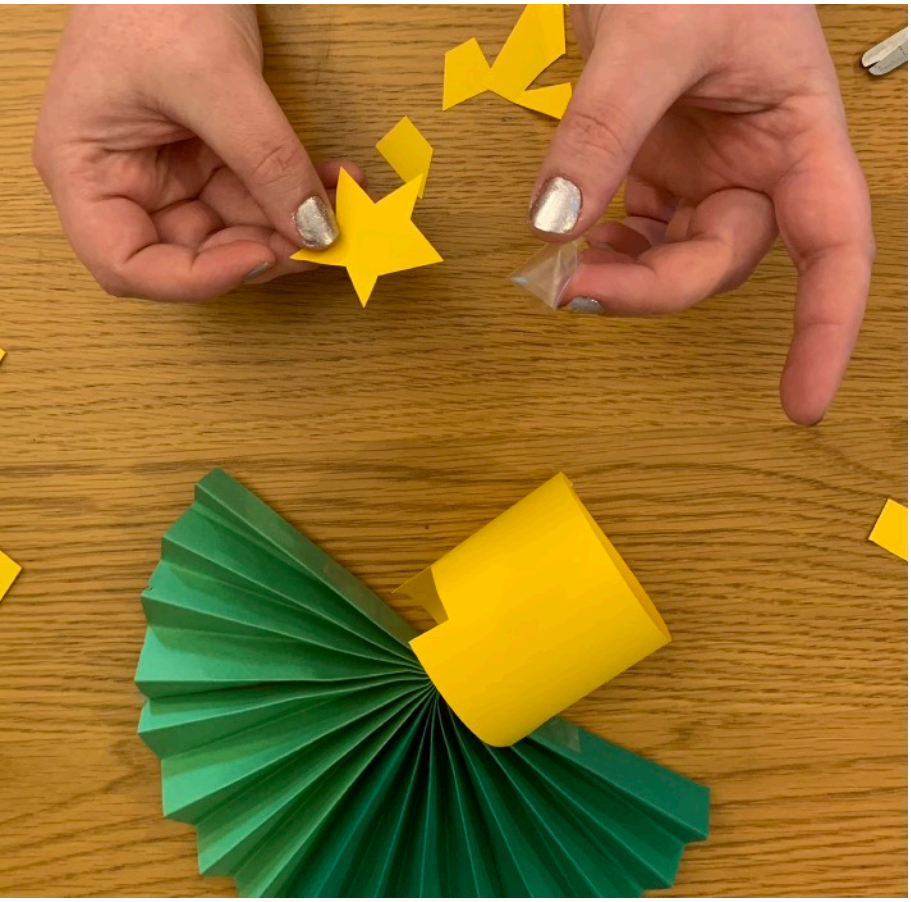

Using the remainder of the yellow paper you can create decorations - we went for a very simple star for our tree

Fold tape over on itself to stick behind and then stick your tree on top, the final thing to do is trim the sides of the tree to make it more triangular. If you like the semi circle then you can leave it as such too!

There you have it you very own “Fanned Christmas Tree”!
