Fold-over Paintings

You can create symmetrical painted images simply by painting one half of the image and folding your paper over to repeat it like we have!

Tools and Materials:

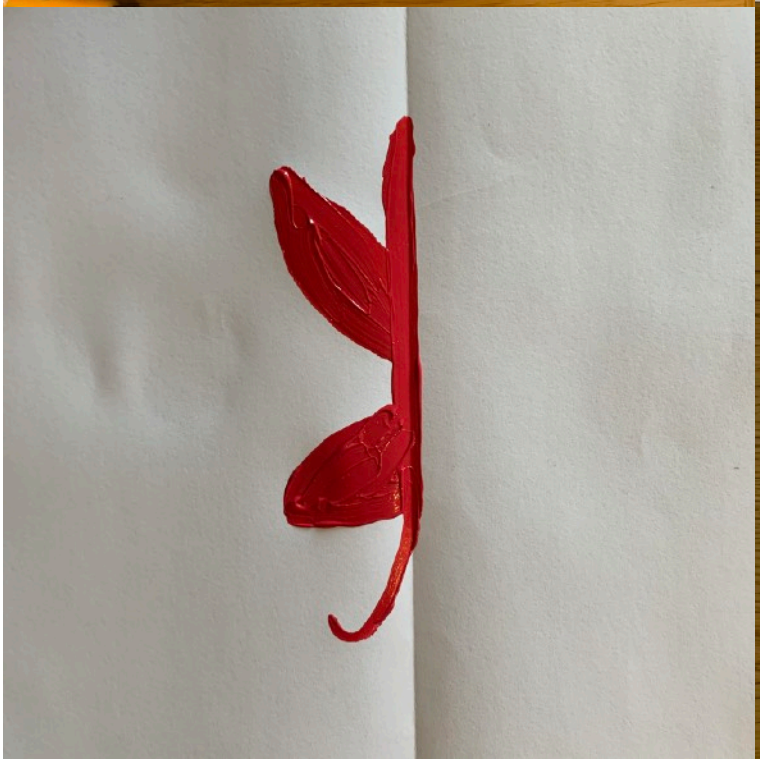

- Paper
- Paintbrush
- Paint
- Water

First of all take your paper and fold it in half - this gives you a guideline on where to paint! We put the paint straight on to the paper - try and keep it thick and paint fast so your point doesn't dry out before you fold it over. We also worked on one colour at a time to save time washing brushes as much.

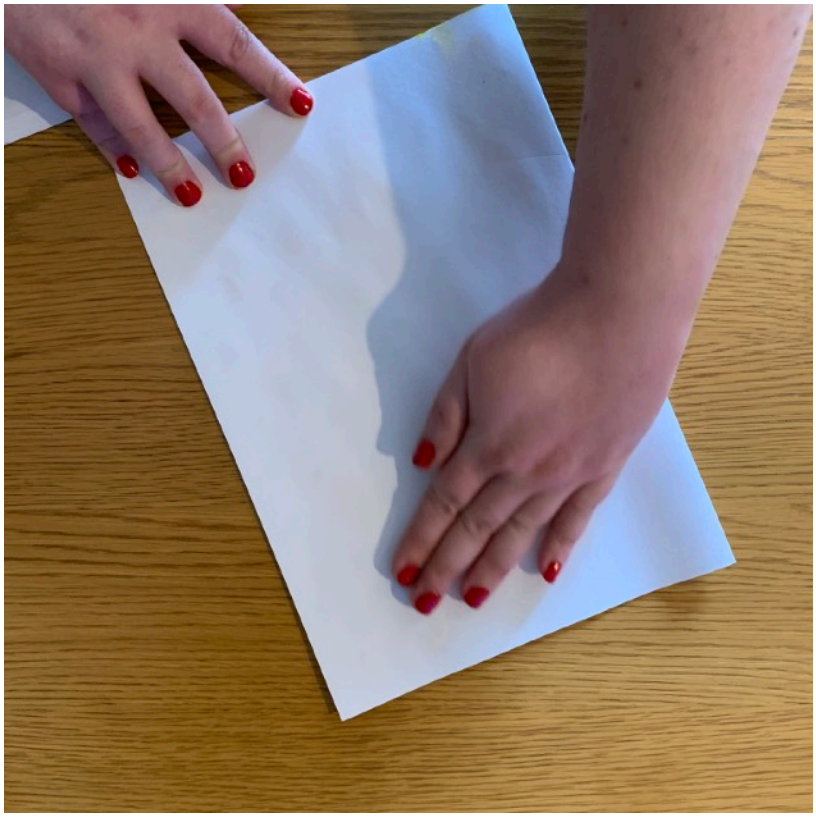

When you have finished your half painting fold over the paper and smooth it down gently to make sure it touches all the paint

When you have smoothed it all over you can begin to unpeel it to reveal your painting

There you have it your very own “Fold-over Painting”!

Here is another we made to inspire you!
