Go Fish Game

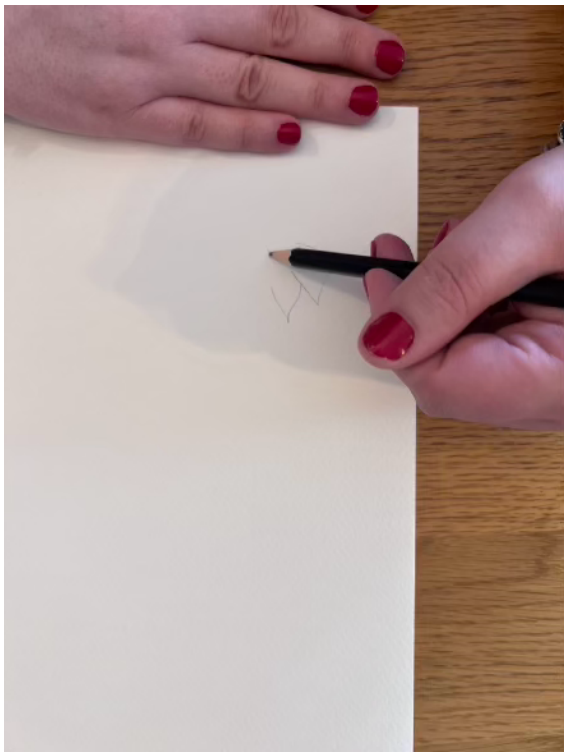

This is a super fun was to create your own personalised game to play! Picking up your items with a “fishing pole”!

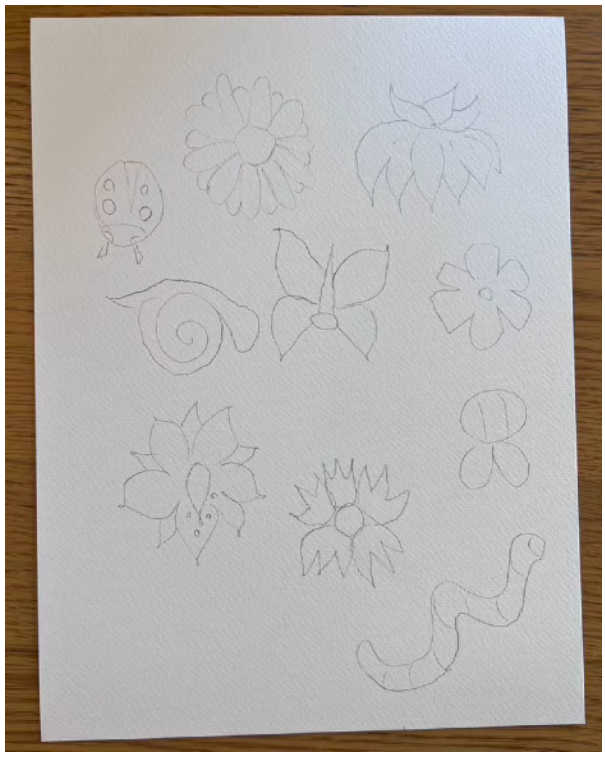

Tools and Materials:

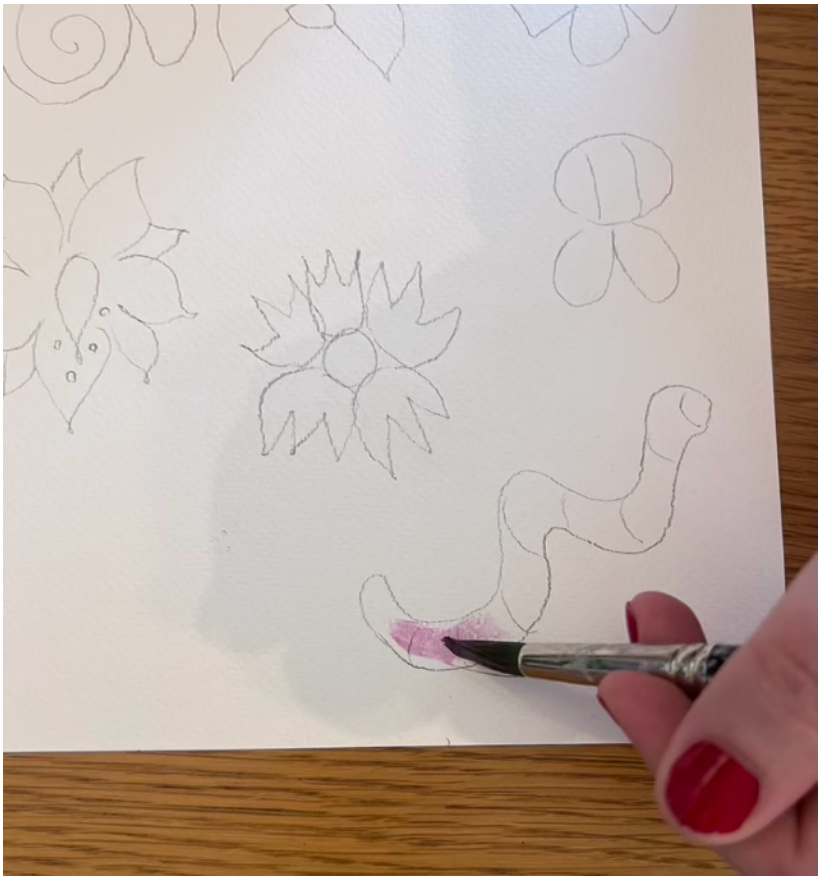

- Paper (2 sheets)
- Pencil
- Pen
- Paintbrush
- Scissors
- Watercolour
- Water
- String
- Wooden Stick
- Magnet
- Paperclips

Go fish can be played in different ways you could set a timer and see who can catch the most in a set time, or you could make 2 poles and fish at the same time - it is completely up to you! We thought it would be fun to create bugs and flowers to fish for so start sketching them out

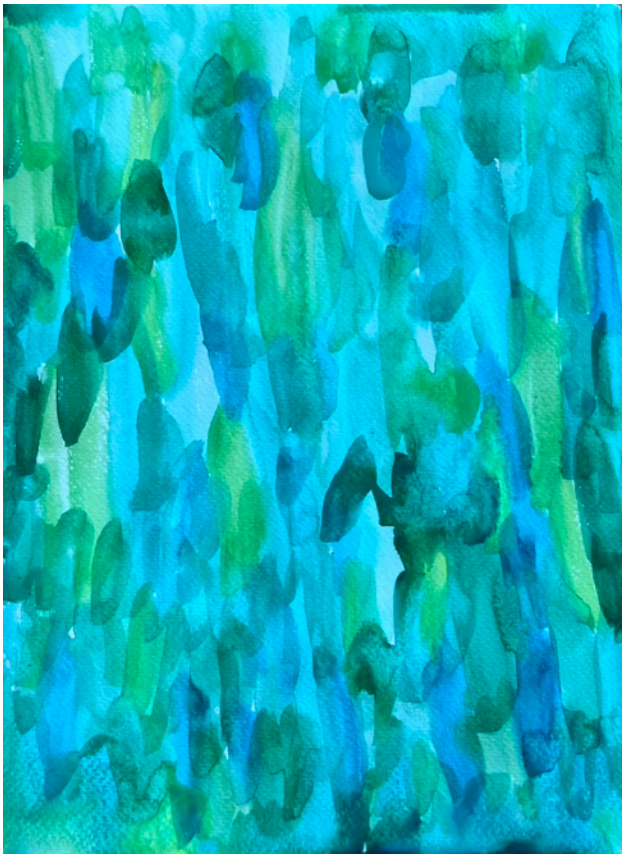

Once you are happy with you creations then you can paint

Whilst you are waiting for them to dry paint the game base - to represent grass we went for abstract green strokes to craft it

Once your flowers and bugs are dry outline with the pen

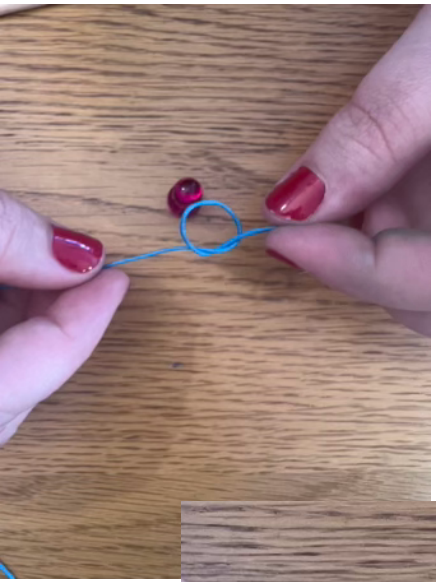

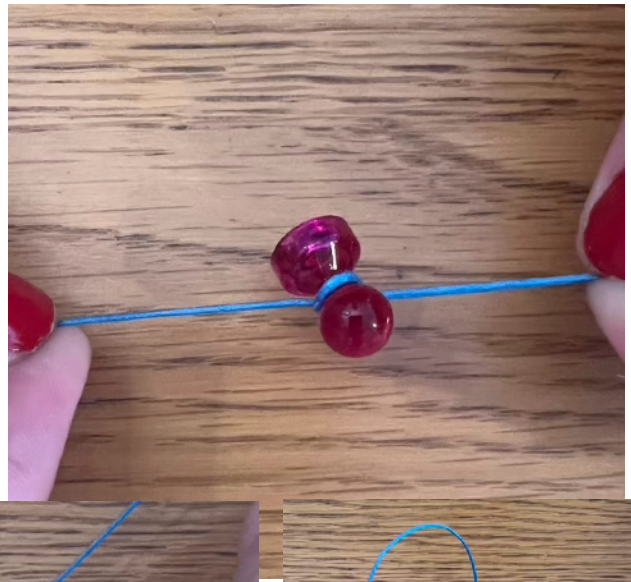

Cut them out and attach a paper clip to each element

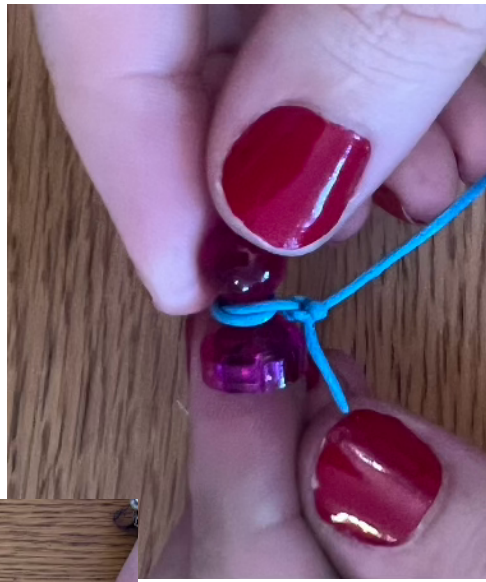

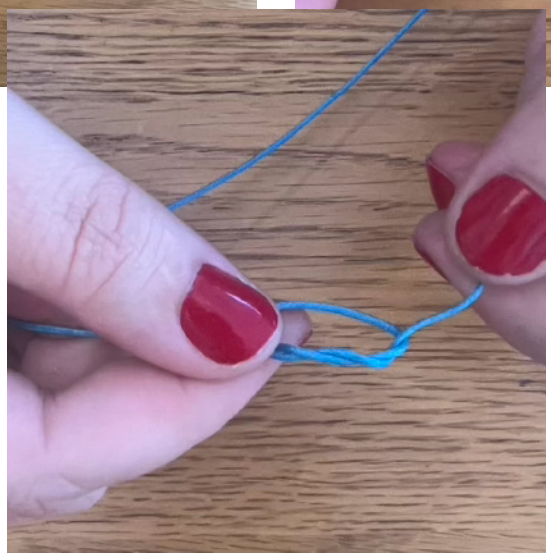

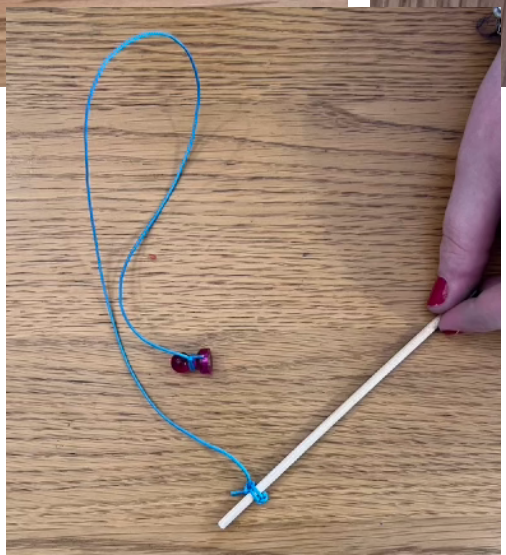

Now to make the fishing pole, cut some string and tie it around your magnet. Tie the other end of the string to the wooden pole - you will probably need to knot it so doesn't fall off

Take the background you painted earlier and fold it to be like a tray, you can push the corners into triangles to make it more stable like so

There you have it your very own “Go Fish Game”!

Here is another we made to inspire you!
