# House of the Future

What might house look like in 1000 or 2000 years? What would they need to house families of the future? Why not create your own house of the future

Tools and Materials:

- Coloured Paper
- Scissors
- Pencil
- Sellotape

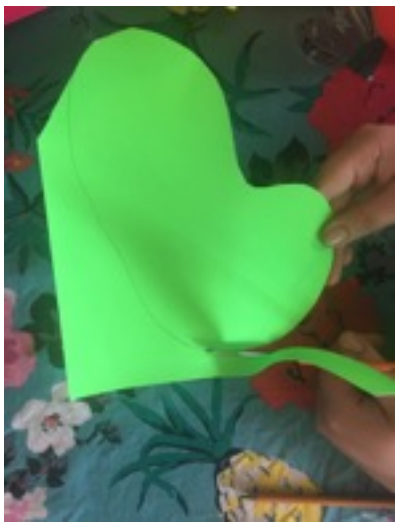

First of all you need to think what the main structure of your house might be - we wanted a house like a rocket so it was kind of space age inspired, so we needed to create tubes for the main body like so

Then we thought it would be fun to imagine it was in a swamp or pond so made a lily pad inspired piece of land for it to rest on

Attach the bits of your house together to form a base to build up from, use strips of sellotape at different points to secure it

Then you can add another layer or two depending on what kind of house you want to build!

So once you are happy with the structure you can add decorations such as windows, doors and anything else you can think of!

Stick them on

There you have it your own “House of the Future”

Here is another we made to inspire you
