Invention of the Future

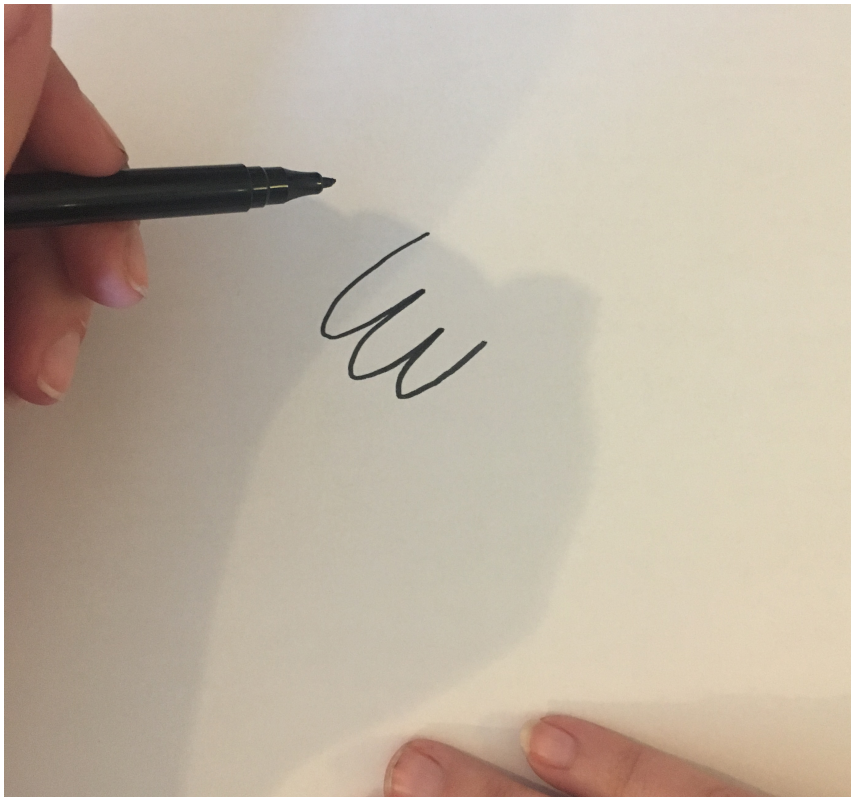

Imagine you lived 100 years from now - what technology would people have in their everyday lives? Why not create what you think they would have.

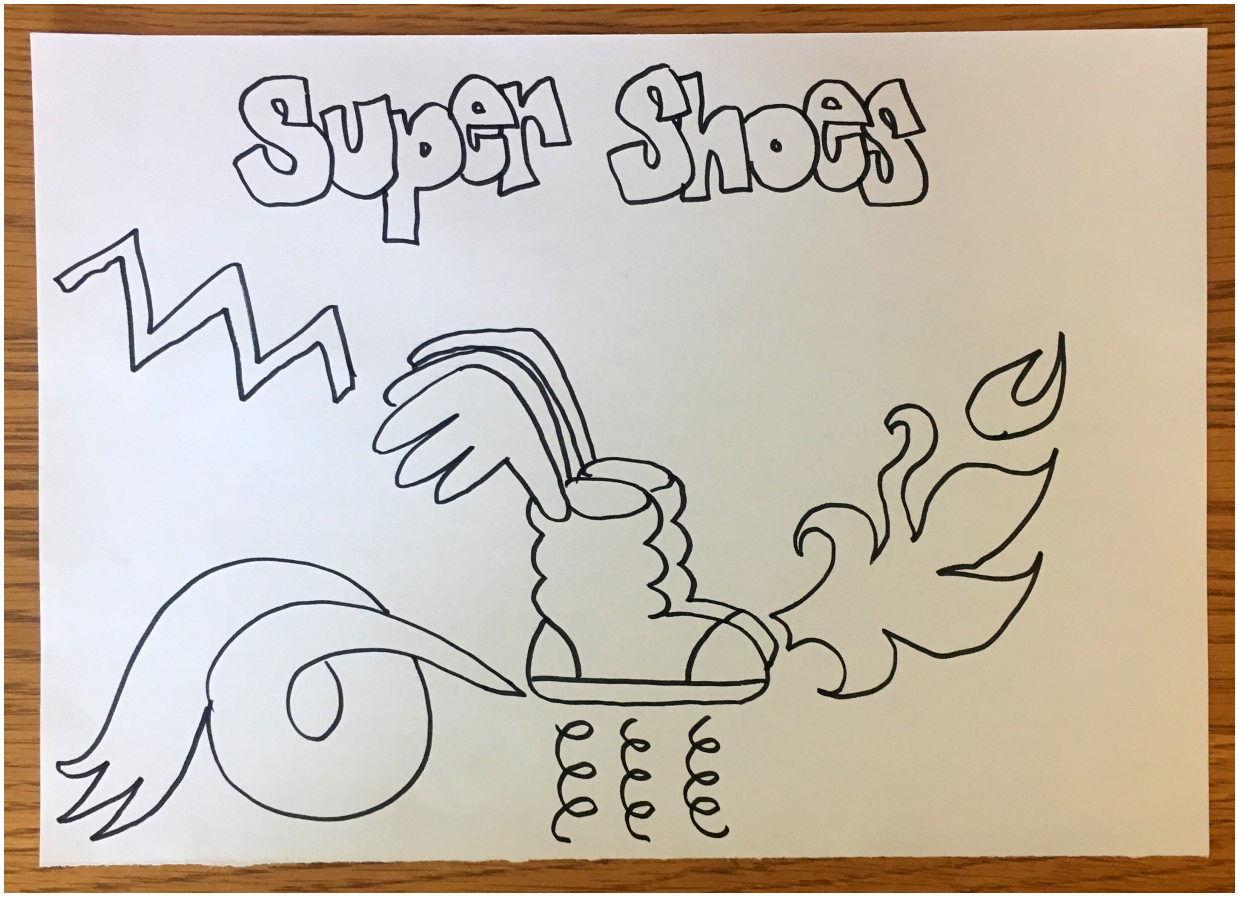

Tools and Materials:

- Paper
- Felt Tips

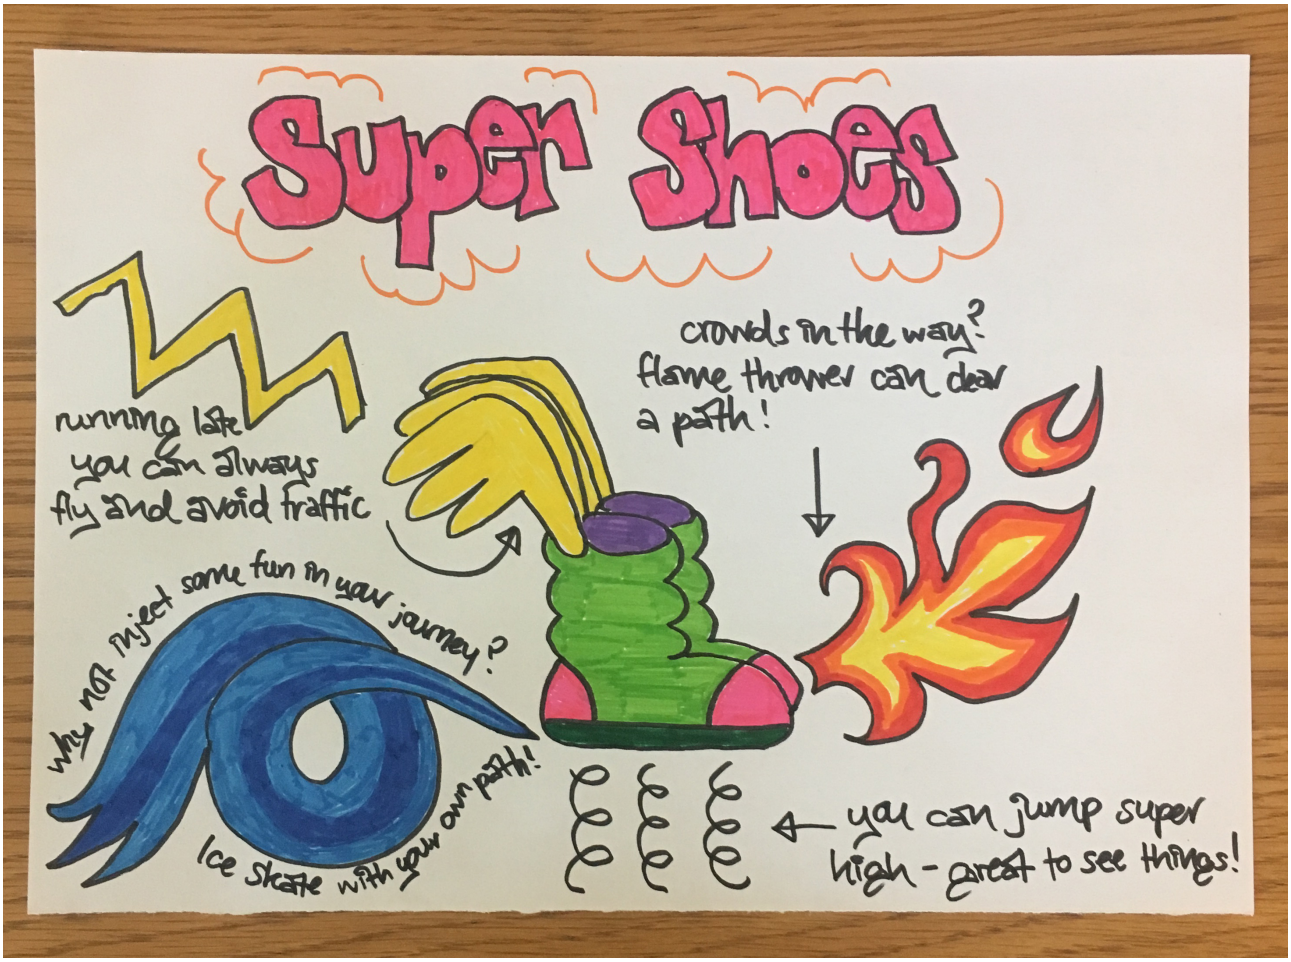

First of all think about what technology we already have - using that as a basis what do you think we will need in the future? We thought some super shoes would be fun! Start sketching your invention out. Colour in and write up what it does!

And there you have it your “Invention of the Future”!

Here’s another we created to inspire you!
