Moving Aquarium

The most low cost and fuss pets ever - create your very own moving aquarium!

Tools and Materials:

- Coloured Paper
- Scissors
- Colouring Pencils
- Plastic Bag/Wrapping
- White Card
- Cereal Box

First you need to create your aquarium, get your cereal box and cut a hole in the middle a bit like a TV screen

Once you have done that you can create a slit in the top so you can make your fish move.

Now you can start to create your aquarium decoration - we made the background out of different shades of blue. You can measure the paper on the back of the box to figure how much paper you will need.

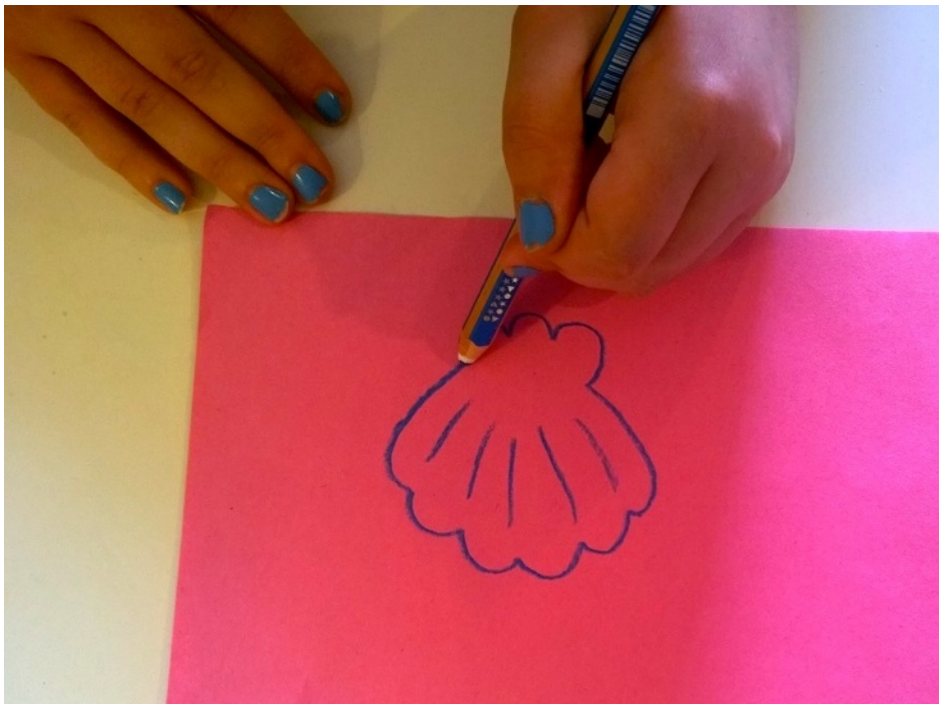

Once you have finished your background you can start creating other decorations such as plants, rocks and other sea-life

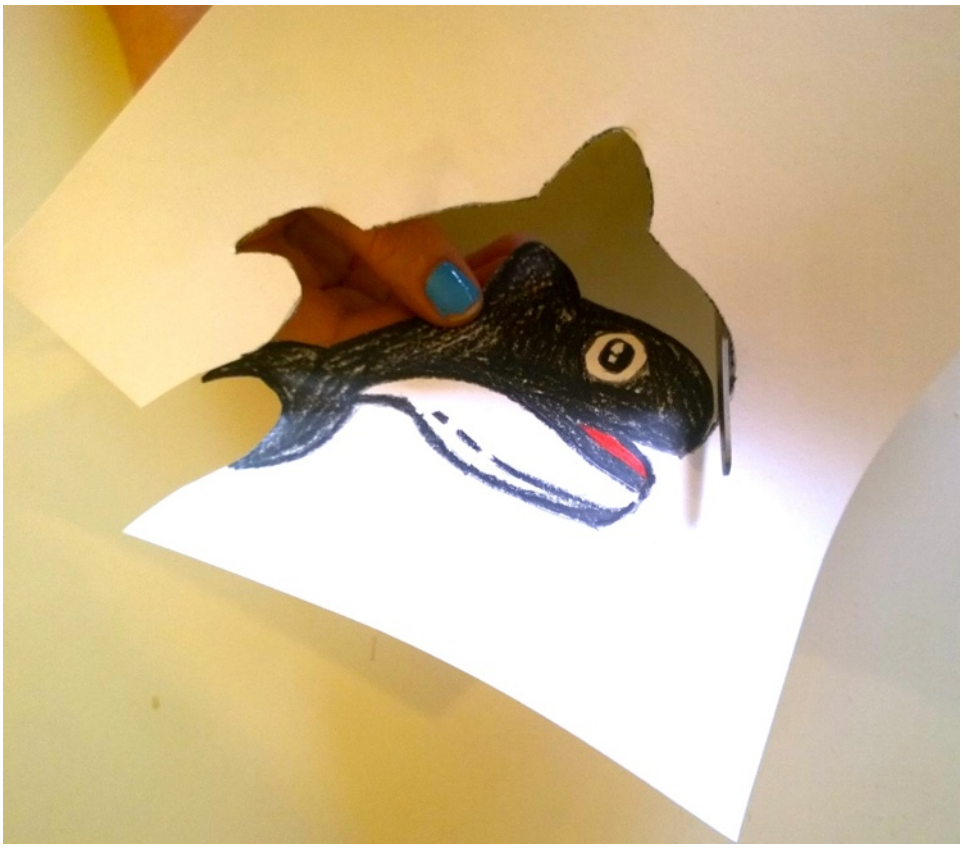

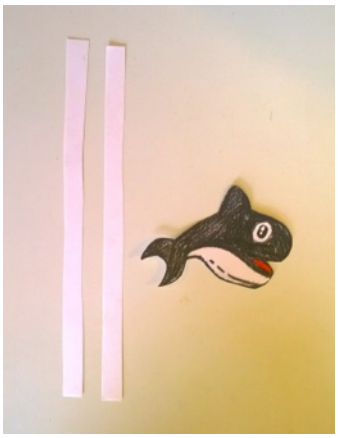

Once you are happy with your decorations you can stick them in.

Now you can create your moving fish - we decided to make a killer whale but you can draw whatever you would like!

Once you have cut out your fish cut 2 strips of card to make it move, glue the strips together and then to the back of your fish

Now you can measure your fish to see how long you want the strip to be - the remainder can make a handle!

And there you have it your own moving aquarium!
