Opposite Hand Drawing

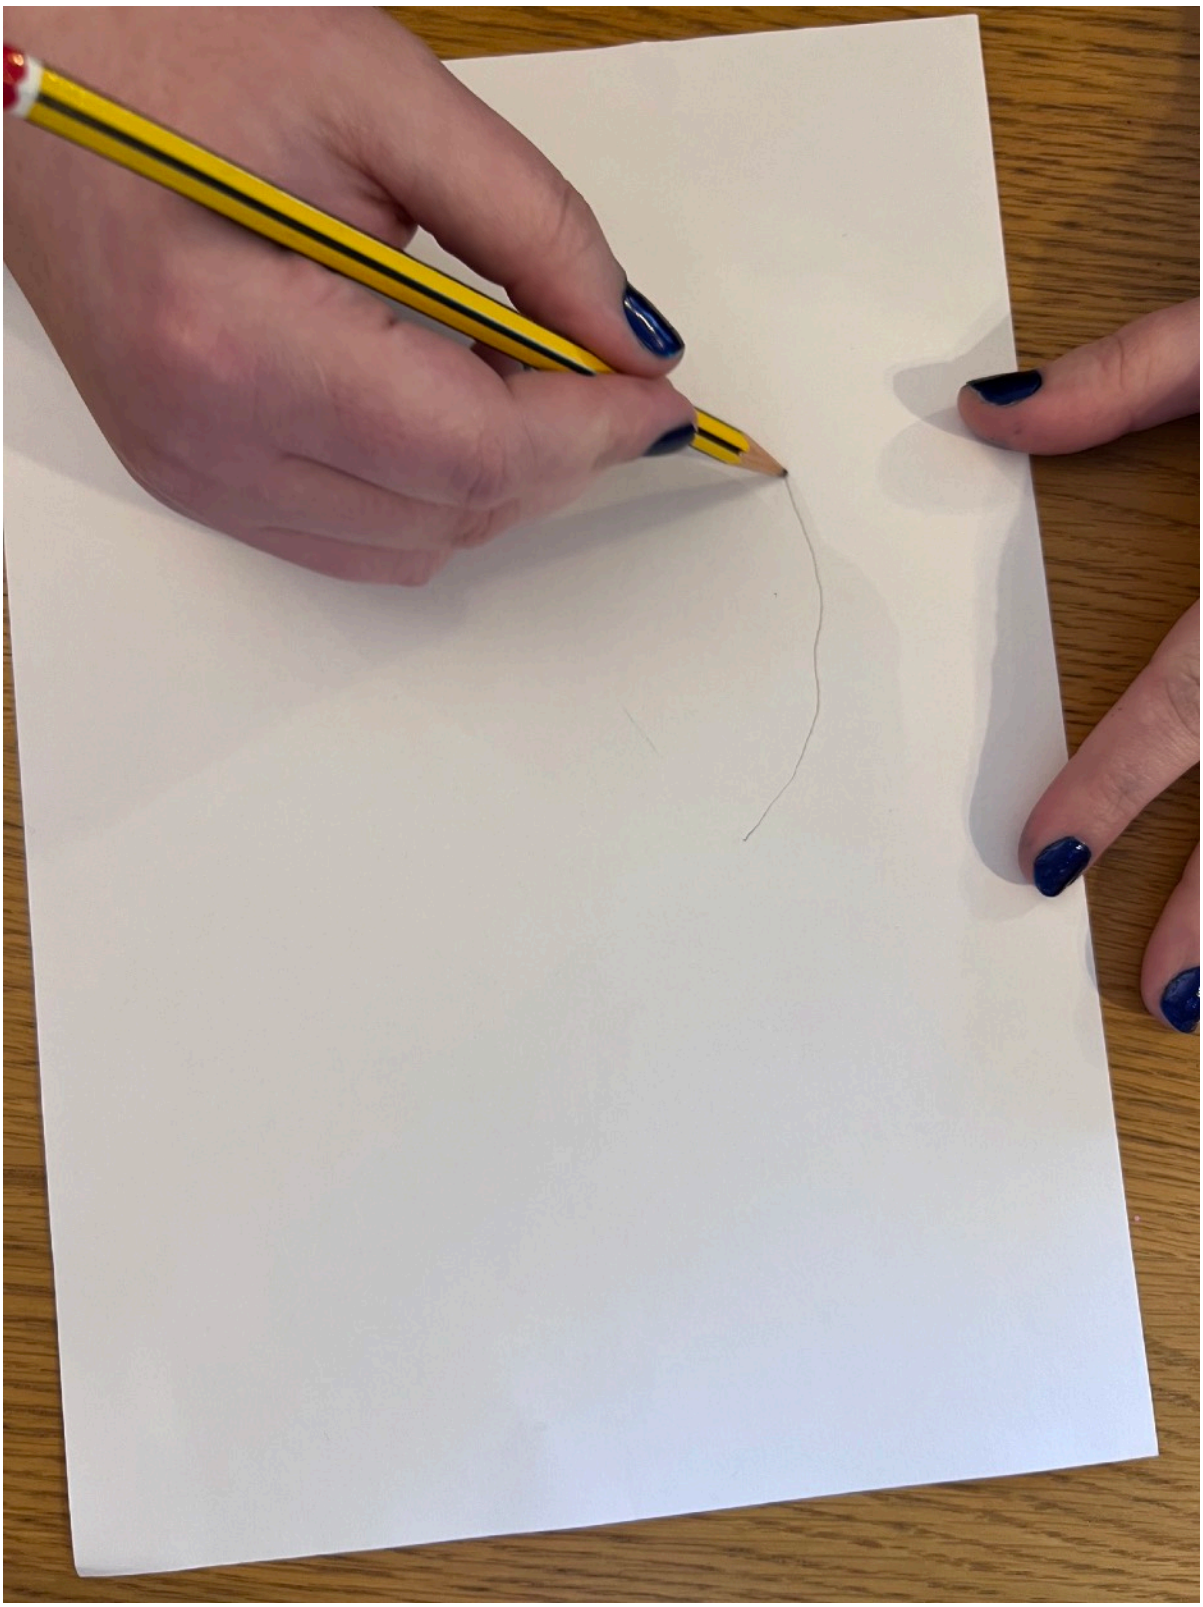

Why not challenge yourself and draw with the hand you don’t usually write with - most of us are right handed or left handed but some people are ambidextrous! So we are aiming to use our non dominant hand for this

Tools and Materials:

- Paper
- Pencil
- Something to draw!

Observational drawing can be hard to begin with and then drawing with your other hand can feel weird because for most of us it isn't as strong as the hand we usually draw or write with - but don't worry the idea is that with practice it can improve and also because we don't press as hard and the moves aren't as confident it can add an extra interest in the drawing. Enjoy the process of sketching!

There you have it your very own “Opposite Hand Drawing”!
