Paper Circle Firework

Celebrating Bonfire night or fireworks in general - you can create colourful, collaged fireworks from simple circles!

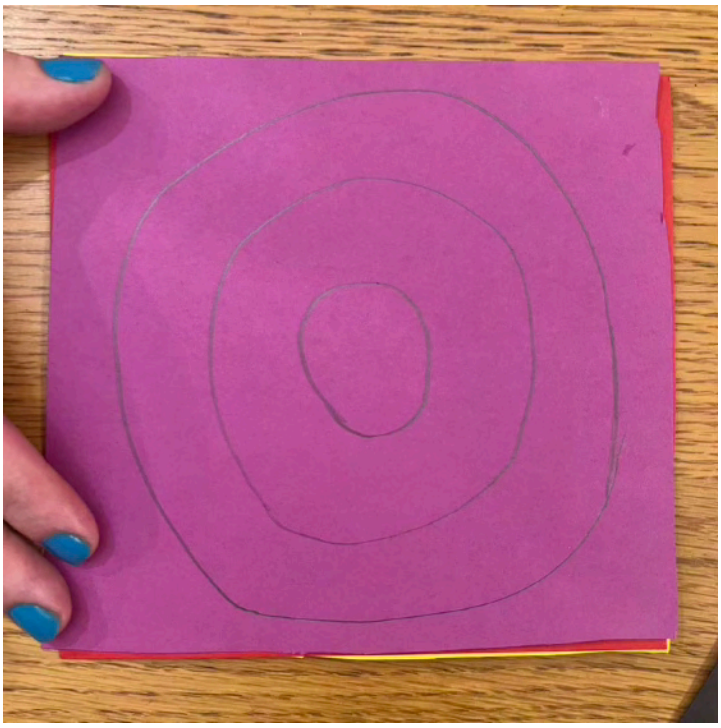

Tools and Materials:

- Coloured Paper
- Pencil
- Glue Stick
- Scissors

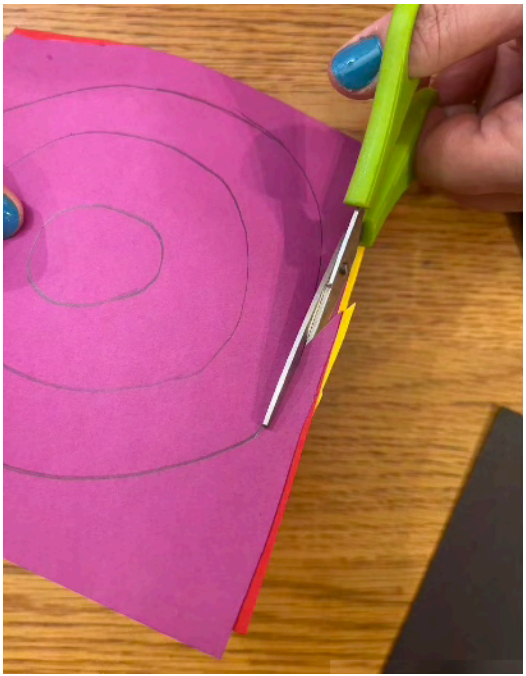

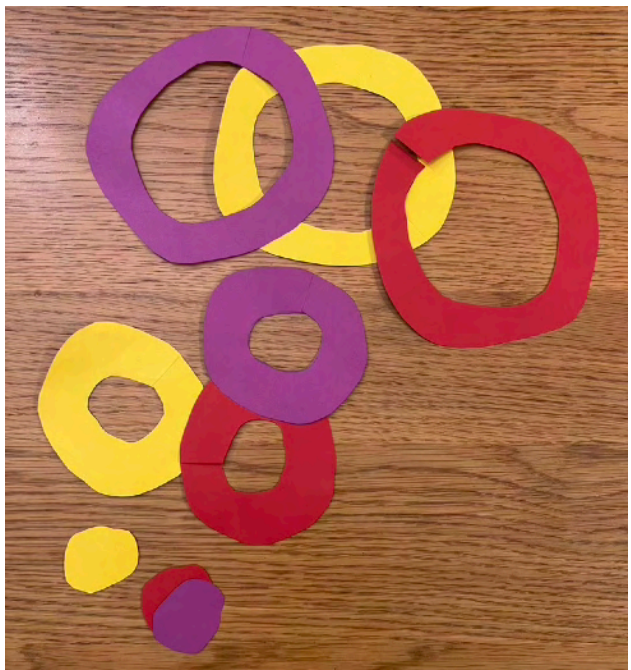

This is just a different way from simple collage that we discovered to make more impactful fireworks - like the show stopping ones at the finale of New Years Eve! We chose a dark colour for the sky - black in this case and 3 scraps of different coloured paper to create the fireworks. Put your 3 scraps of the same size together and start to draw rough circles like so, 3 in total

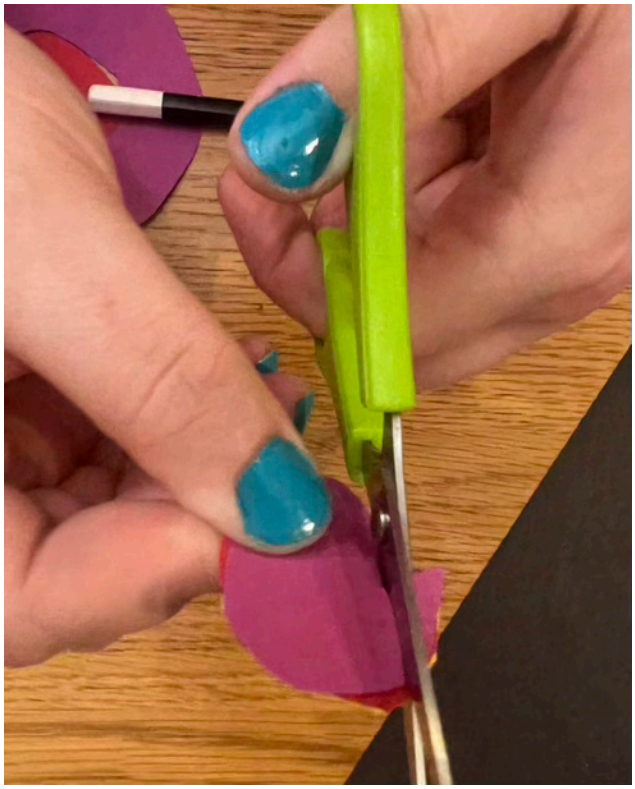

Once drawn then you can cut them out together, your paper stacked so the circles are the same on each piece without having to redraw them

Take the 3 smallest circles and keeping them together start to cut teardrop shapes out like so

Arrange them on you page alternating colours then you can glue them, it helps to place them out first so you can gauge the space

Repeat the process with the next ring (middle size) cutting the shapes out then laying them on the paper so you can see how you think they look best before you glue them. On the larger circles/rings you can draw the shapes if it helps!

There you have it your very own “Paper Circles Firework”!

Here is another we made to inspire you!
