Paper Dolls

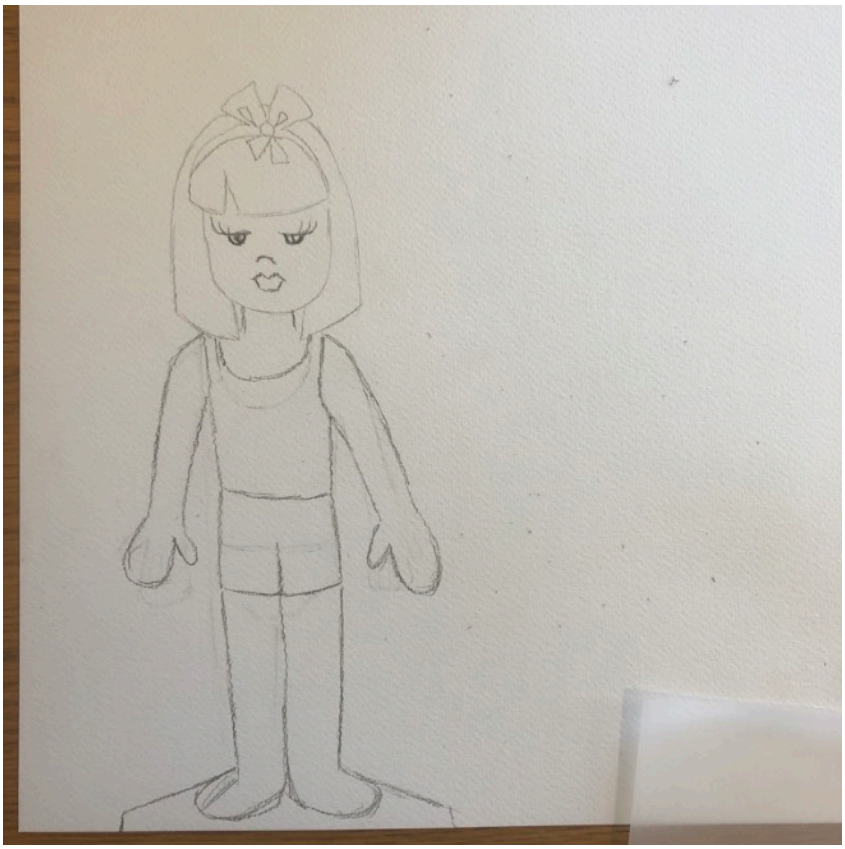

Paper Dolls have been around for hundreds if not thousands of years potentially - the first manufactured one was in 1810 in London! This is a fun way to create your own character and different outfits and accessories for them to wear!

Tools and Materials:

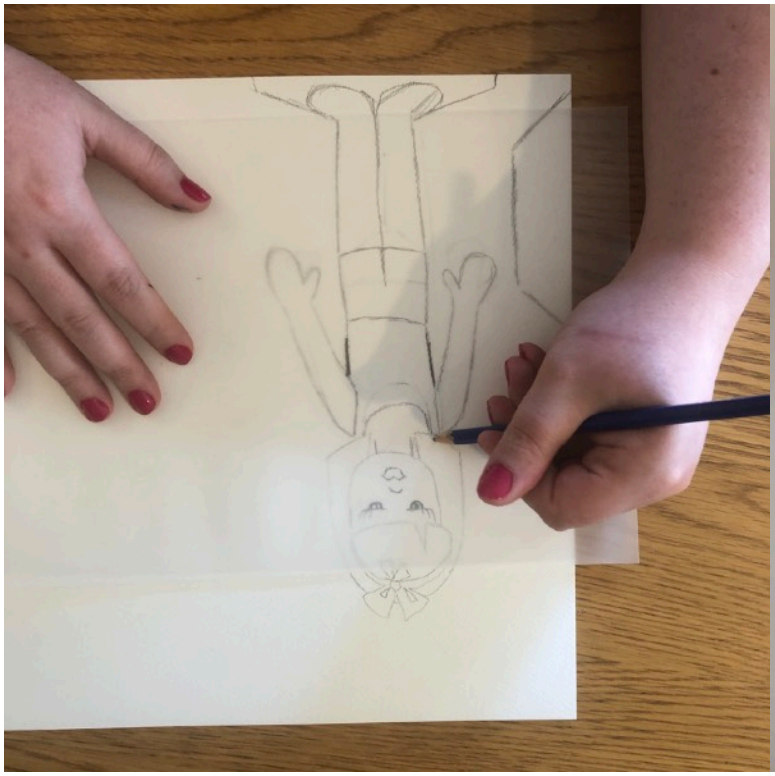

- Paper (A3 if possible!)
- Pencil
- Feltips
- Scissors
- Tracing Paper

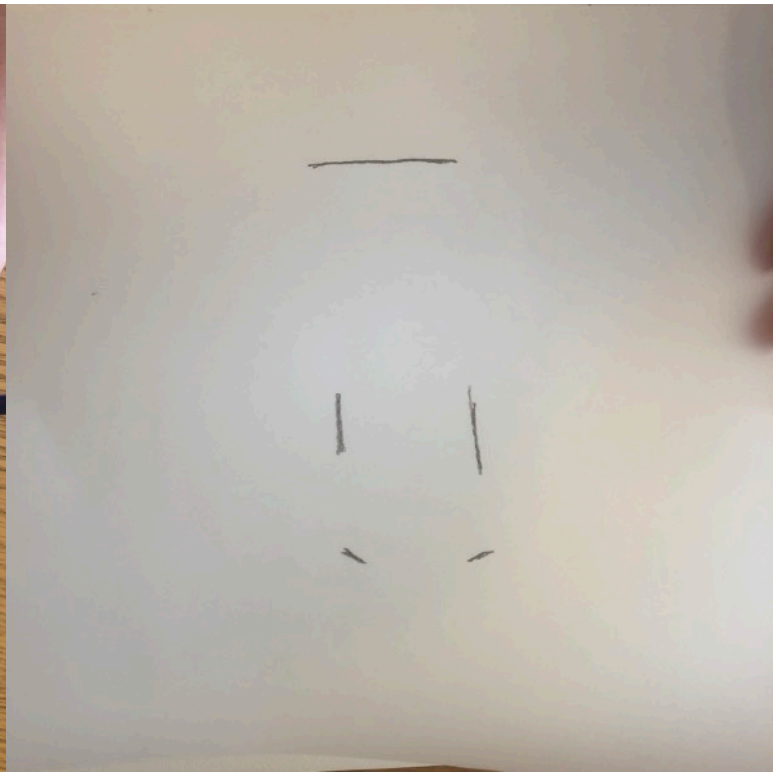

First of all what character do you want to create? Start sketching them out

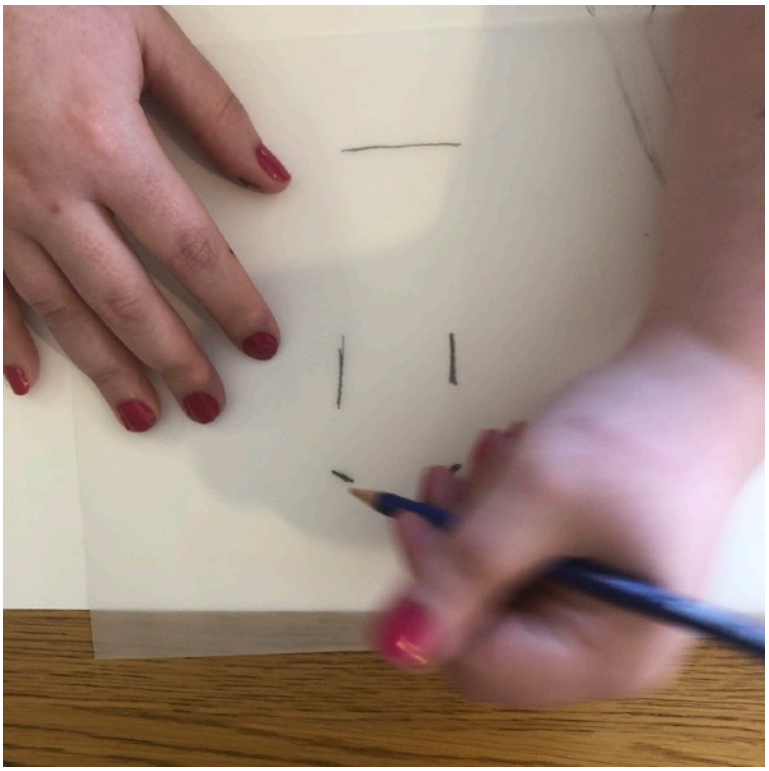

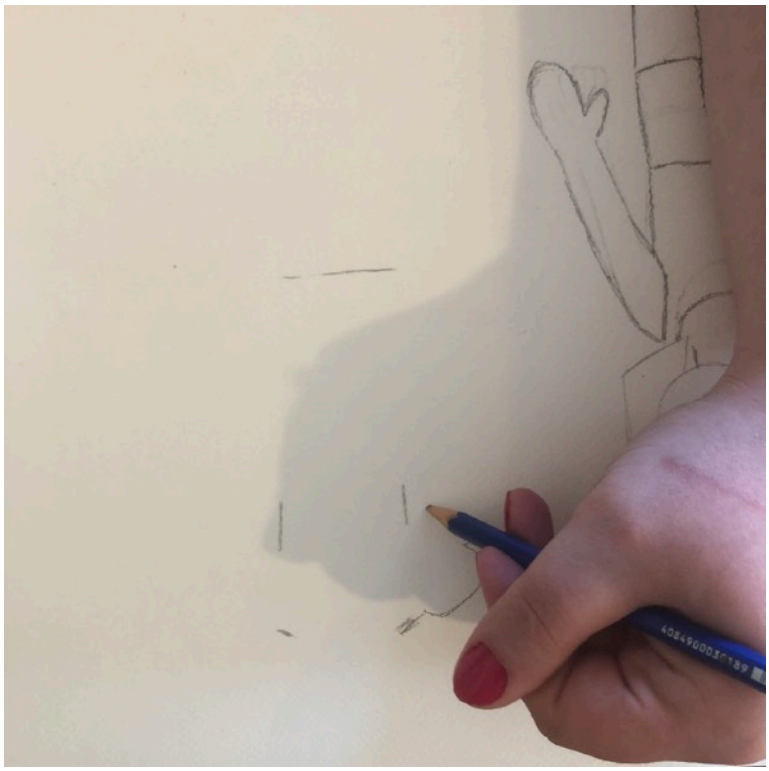

Once you are happy with your character use the tracing paper to measure your character for their outfits like so

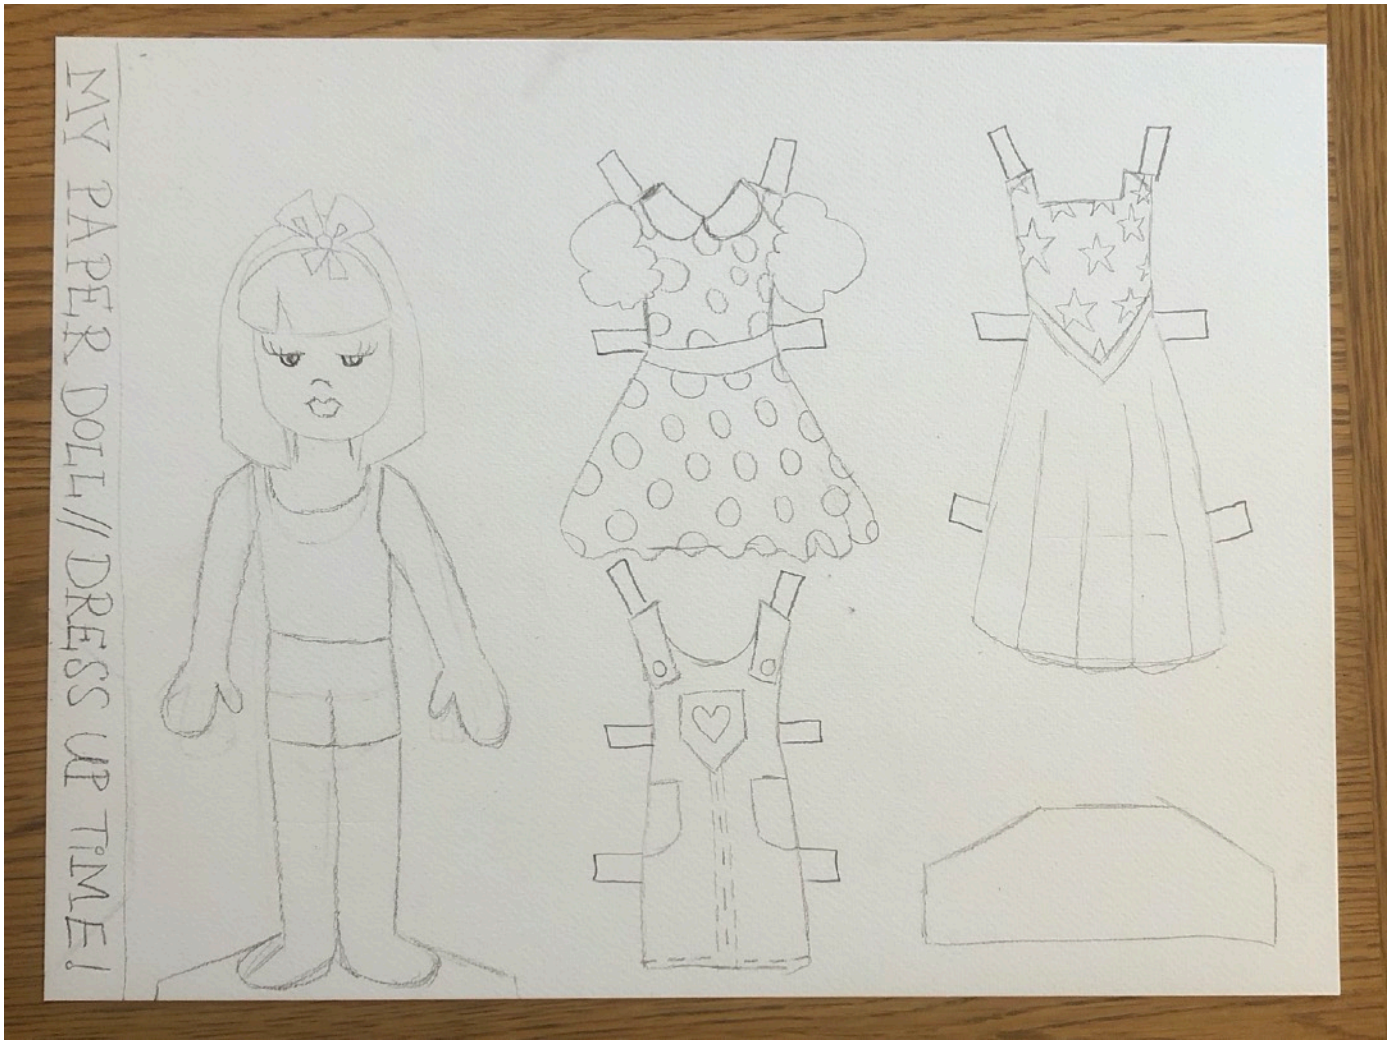

With tracing paper you need to draw on the underside to add lead to make it work when you put it on the paper - using the measurements as a guide you can start drawing clothes for your doll to wear

When drawing your clothes you need to draw “tabs” to fold over to keep them on your doll - your doll also needs a stand you can make this by drawing 2 rectangles that slot together to make an X - when you're happy with your clothes you can colour them in and then cut them out

There you have it your very own “Paper Doll”
