Paper Mosaic

Crafting your own paper squares why not create your own paper mosaic - thinking about how the squares can illustrate your chosen image

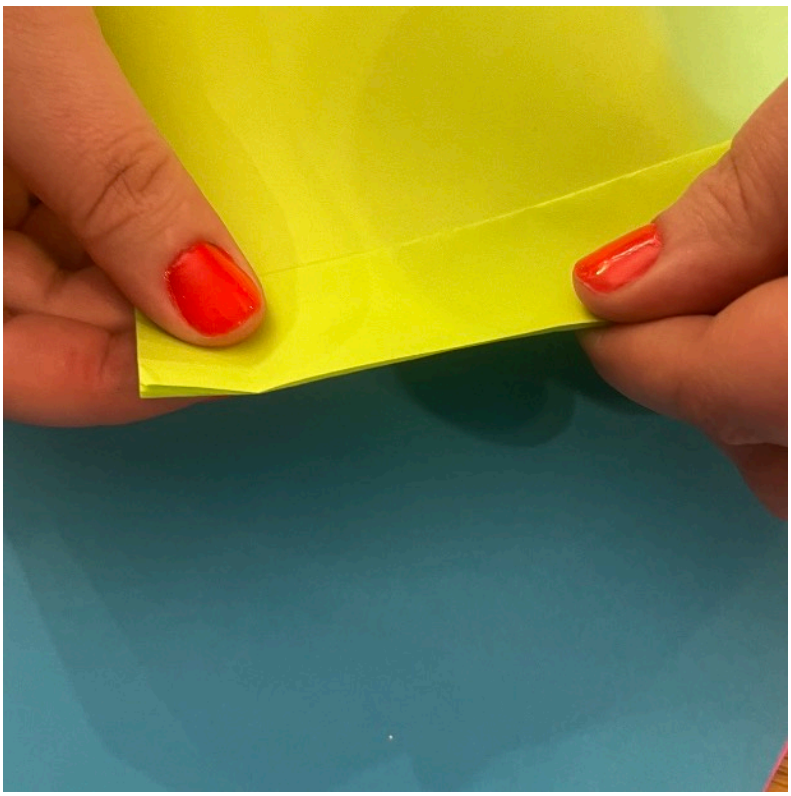

Tools and Materials:

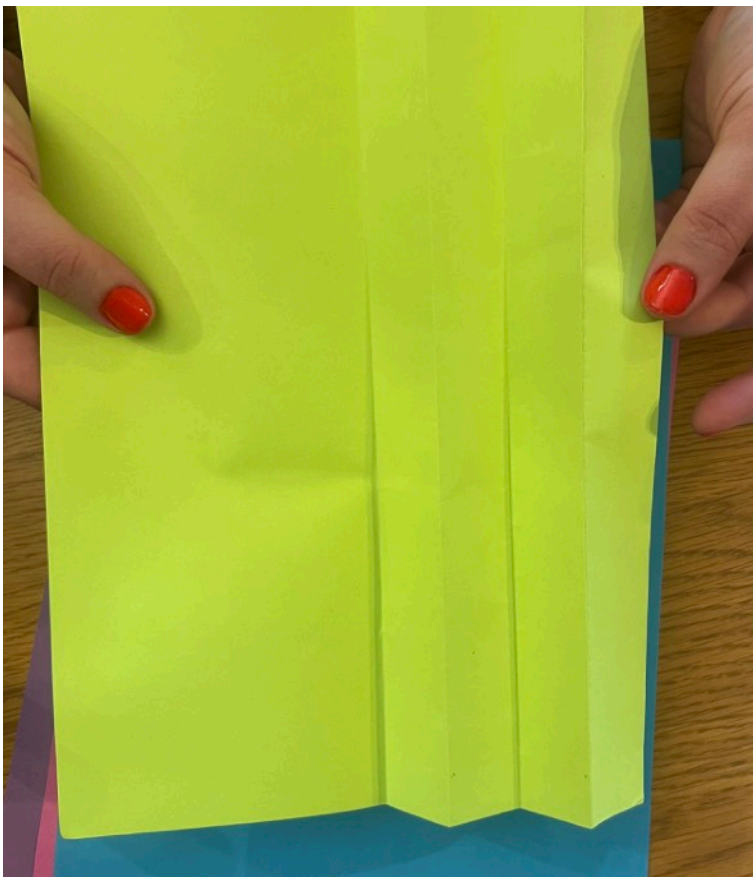

- Coloured Paper
- Paper
- Gluestick
- Scissors

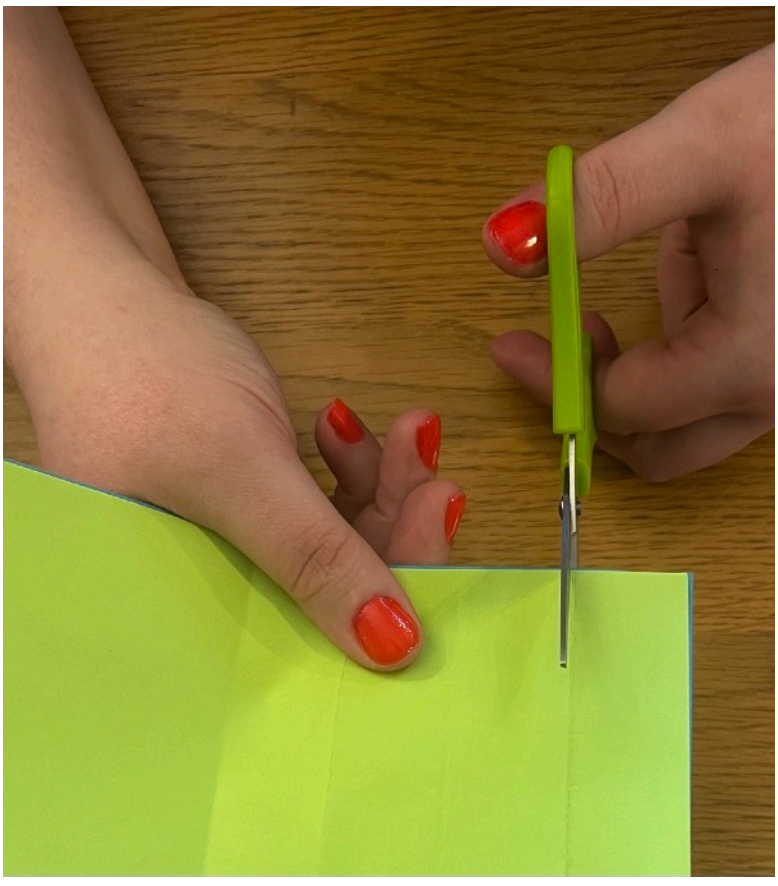

Keeping your white paper as your base, the coloured paper we need to fold into strips like so. Choose a width you are happy with to then be cut into squares and fold multiple strips to cut in all your pieces of paper

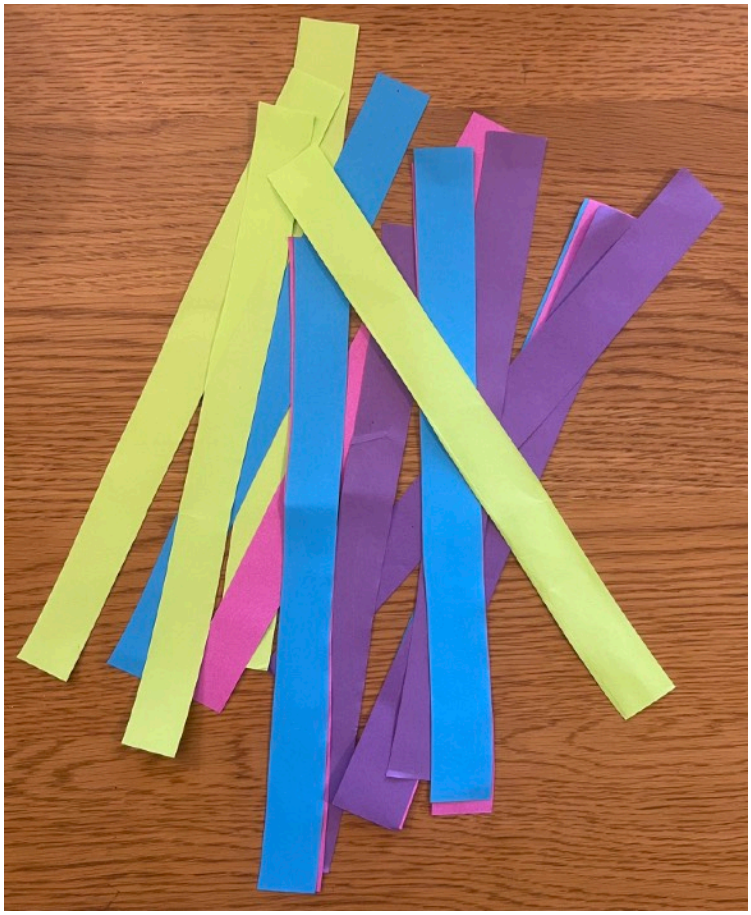

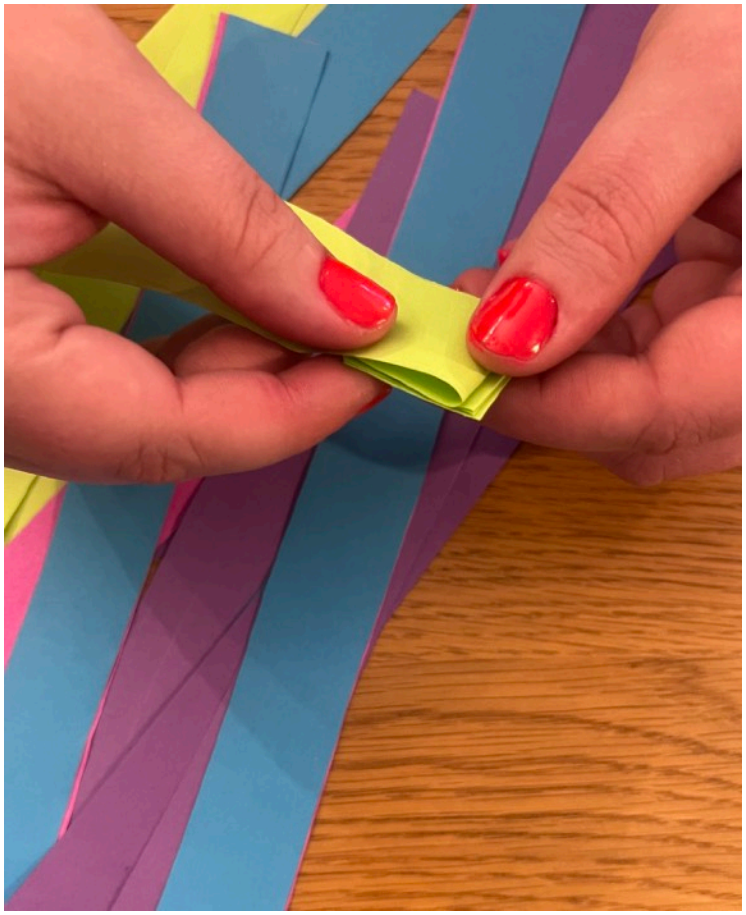

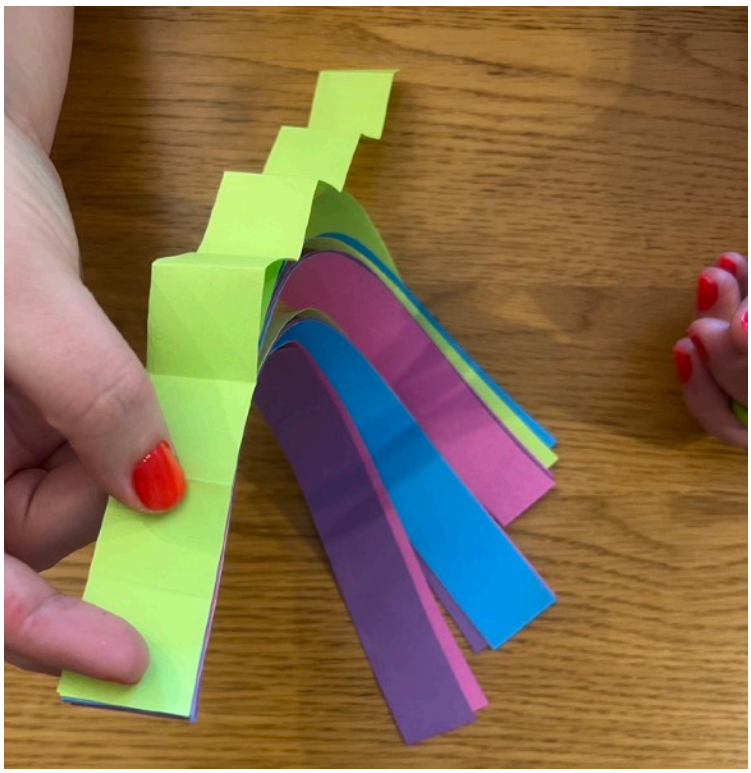

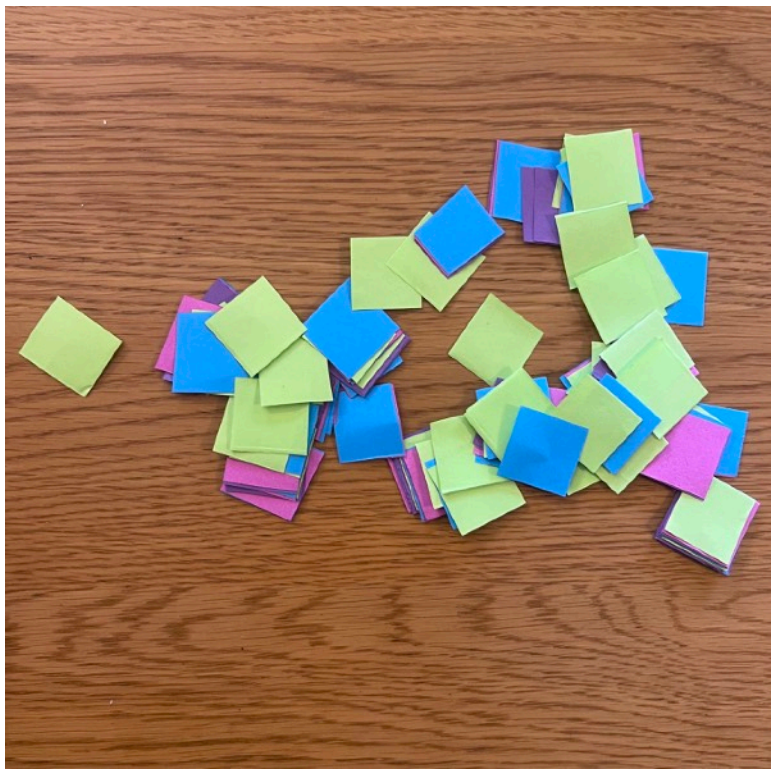

Once you have all your strips then fold one into squares to use as a guide to cut them out

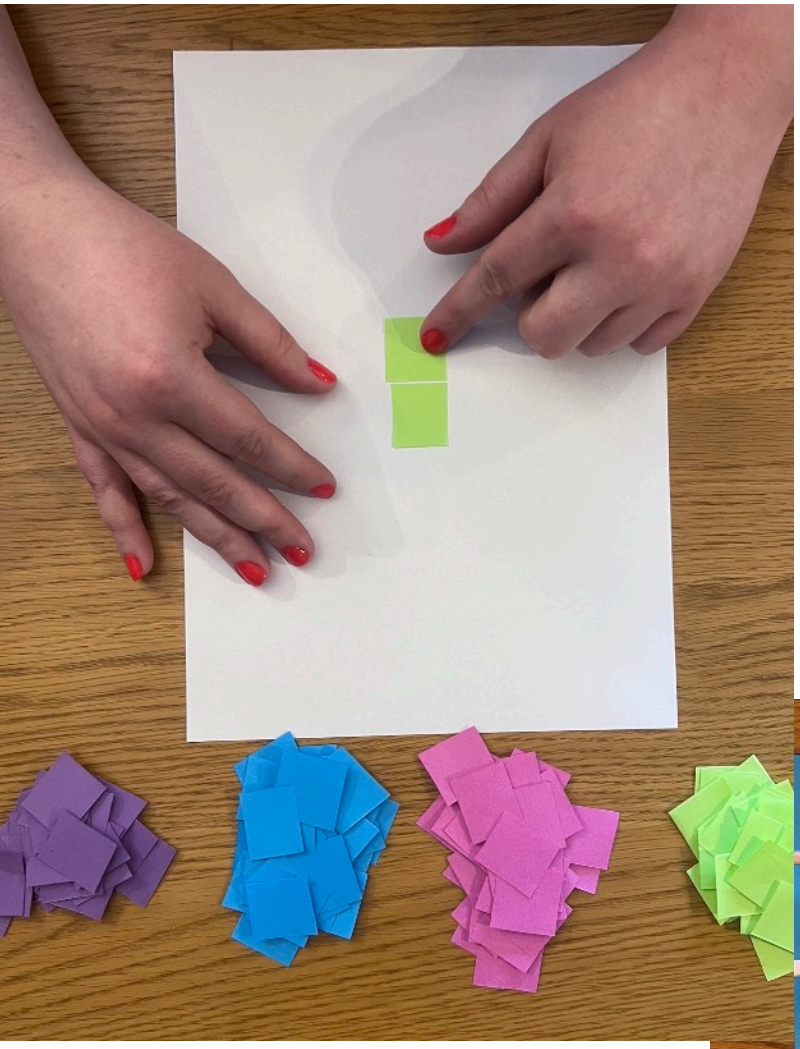

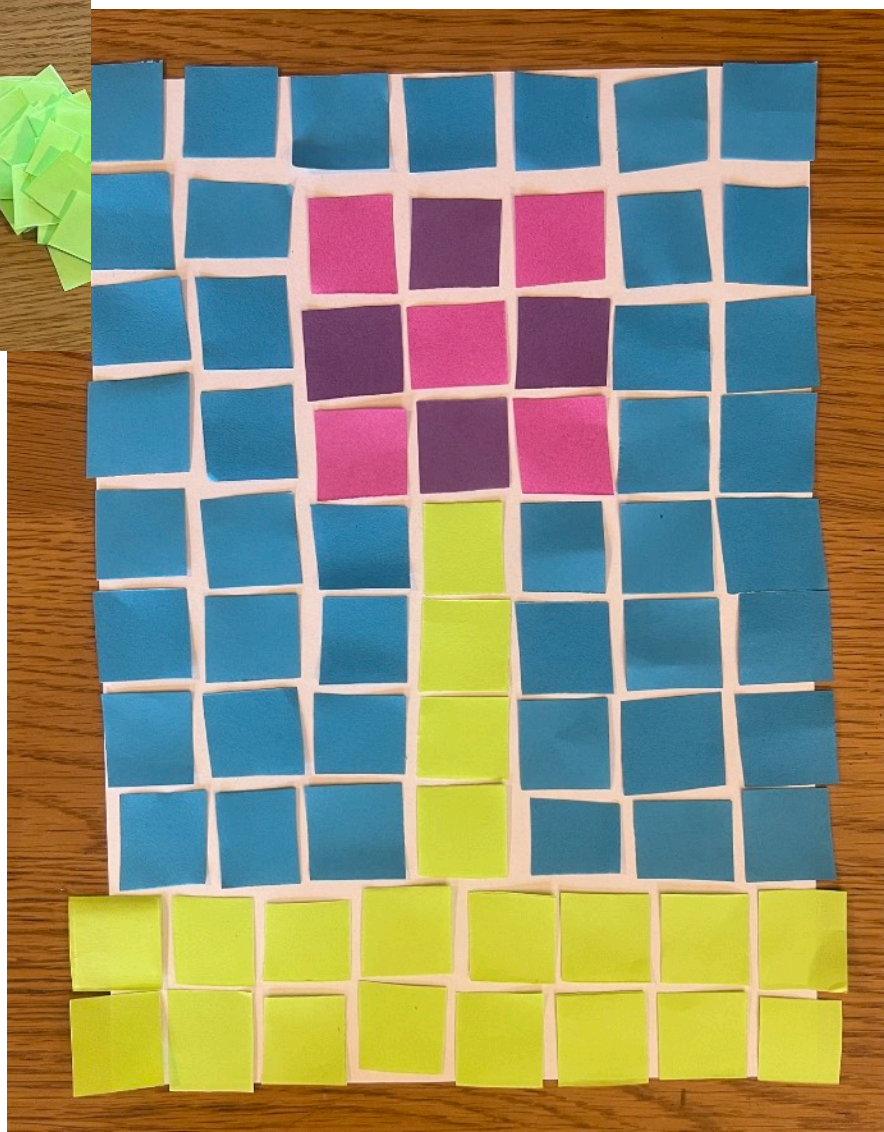

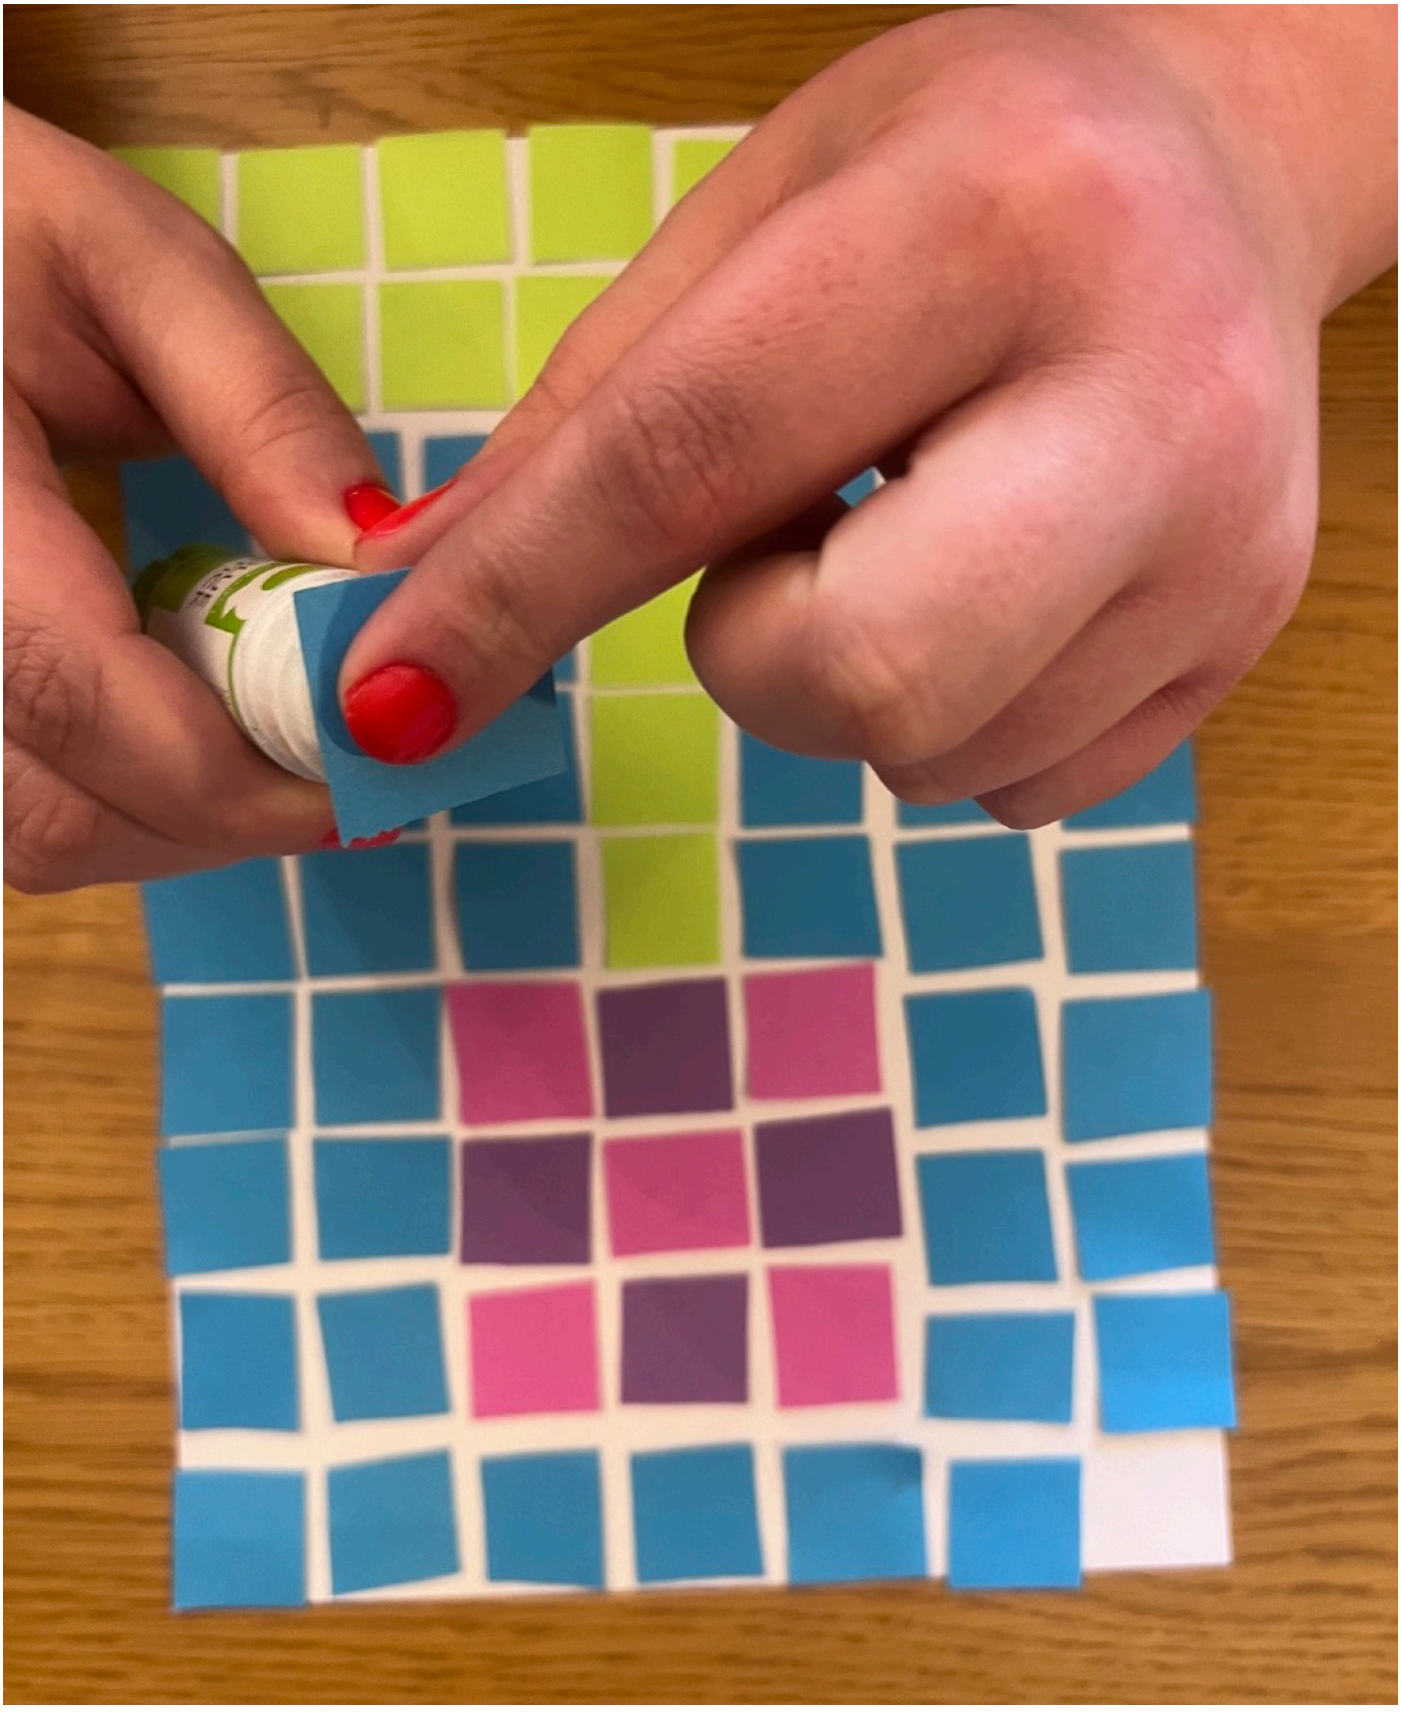

When you have all your squares cut out we found it helpful to arrange them into their colours so it is easier to create. Lay out the squares to make your image - no gluing at this point it is your planning stage!

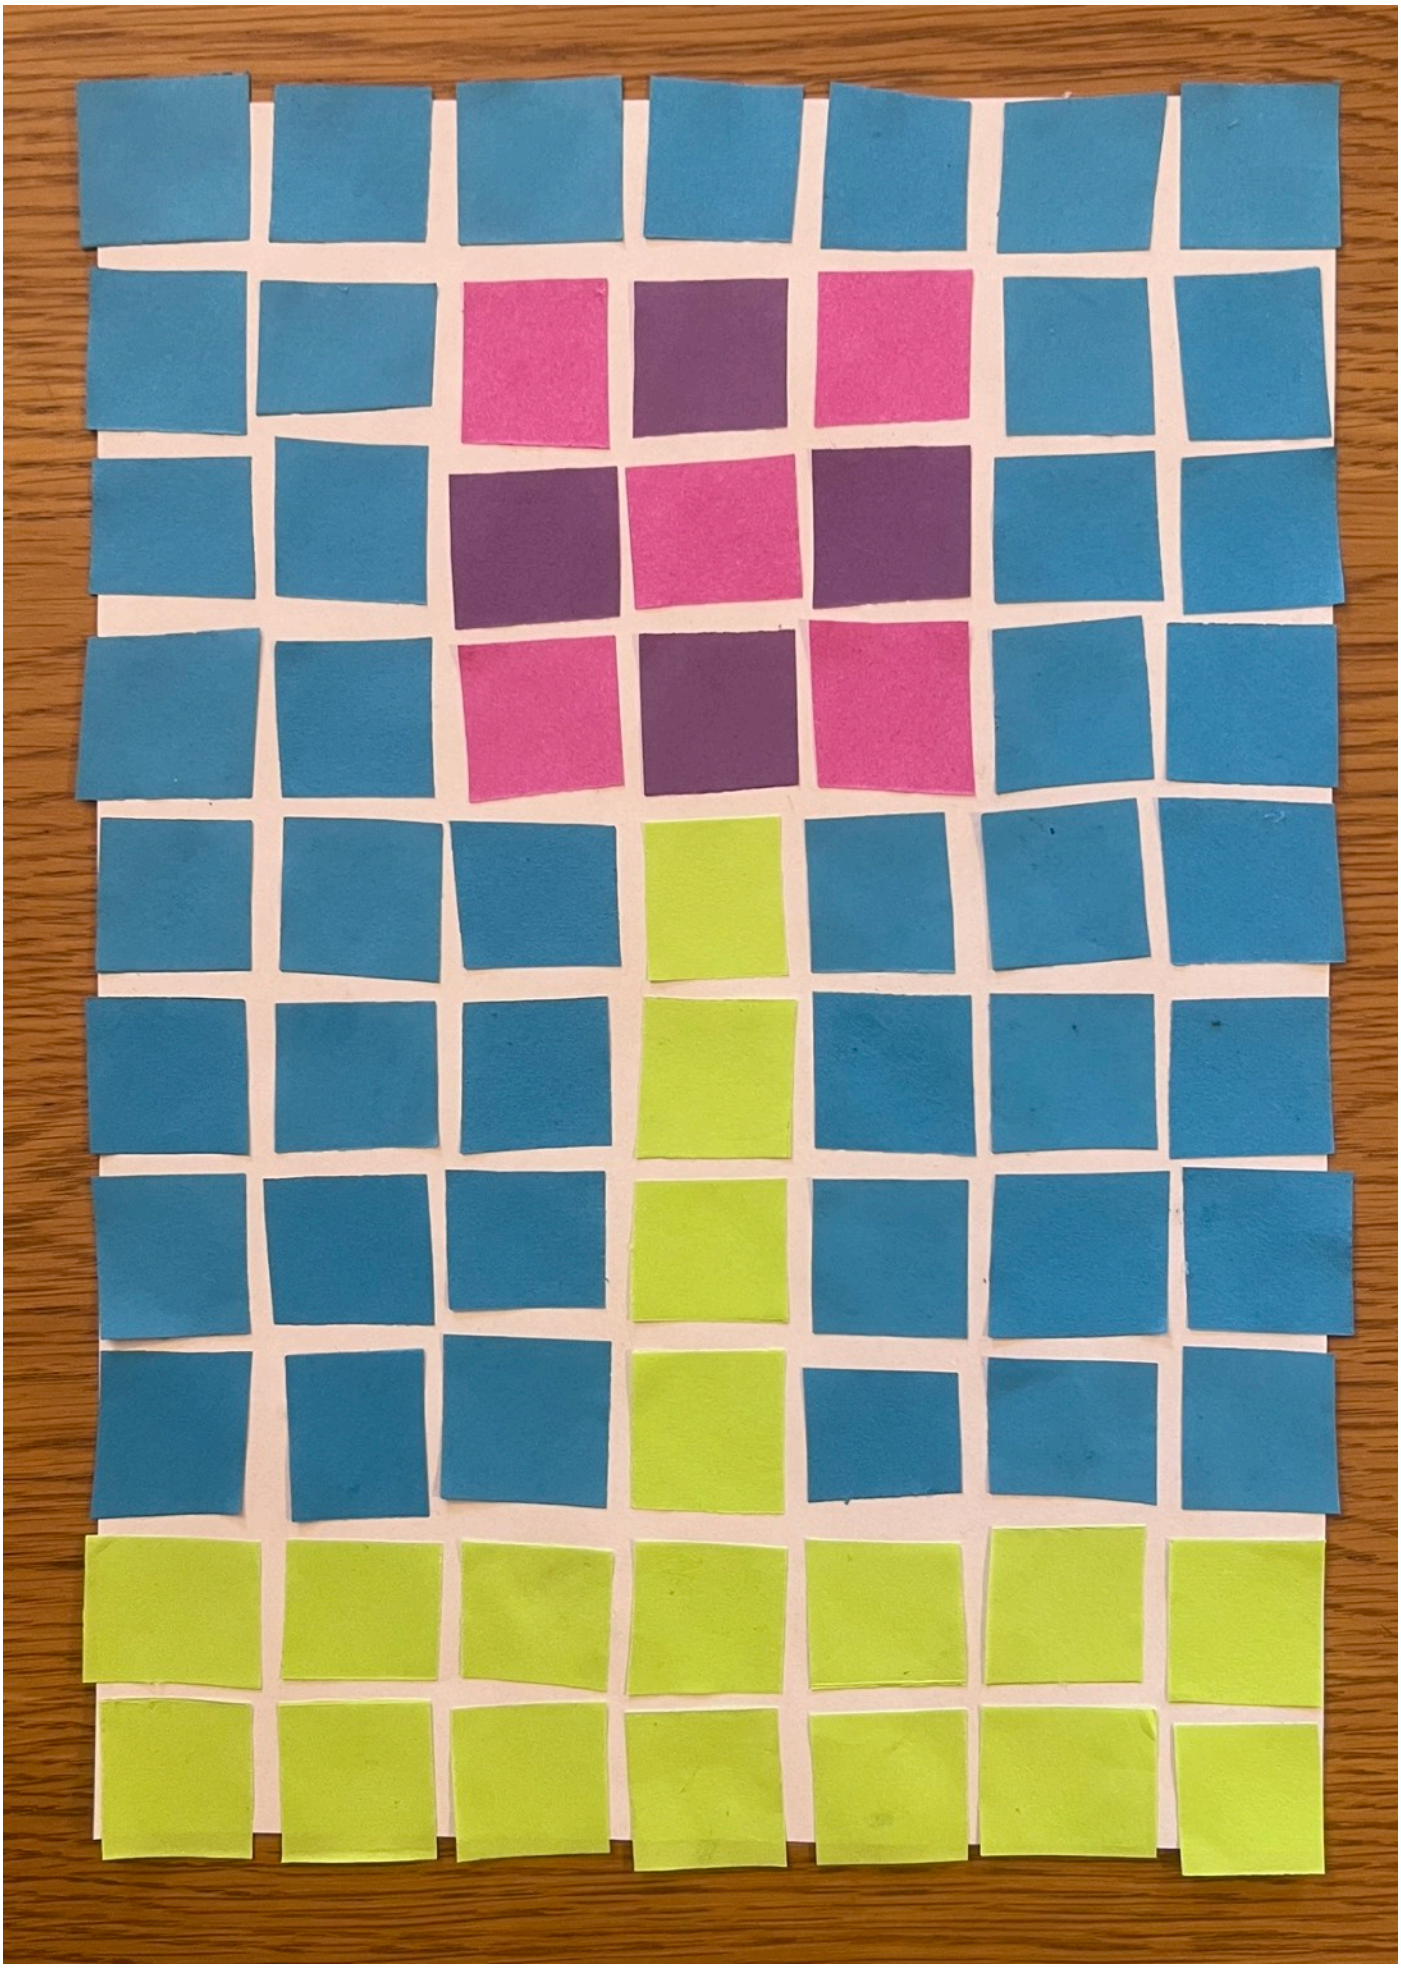

Once you are happy with your image then you can start gluing your squares down. We find it easier to lay the squares first to check your design works as once it is glued it is very hard to change it!

There you have it your very own “Paper Mosaic”!

Here is another we made to inspire you!
