Paper Snowflakes

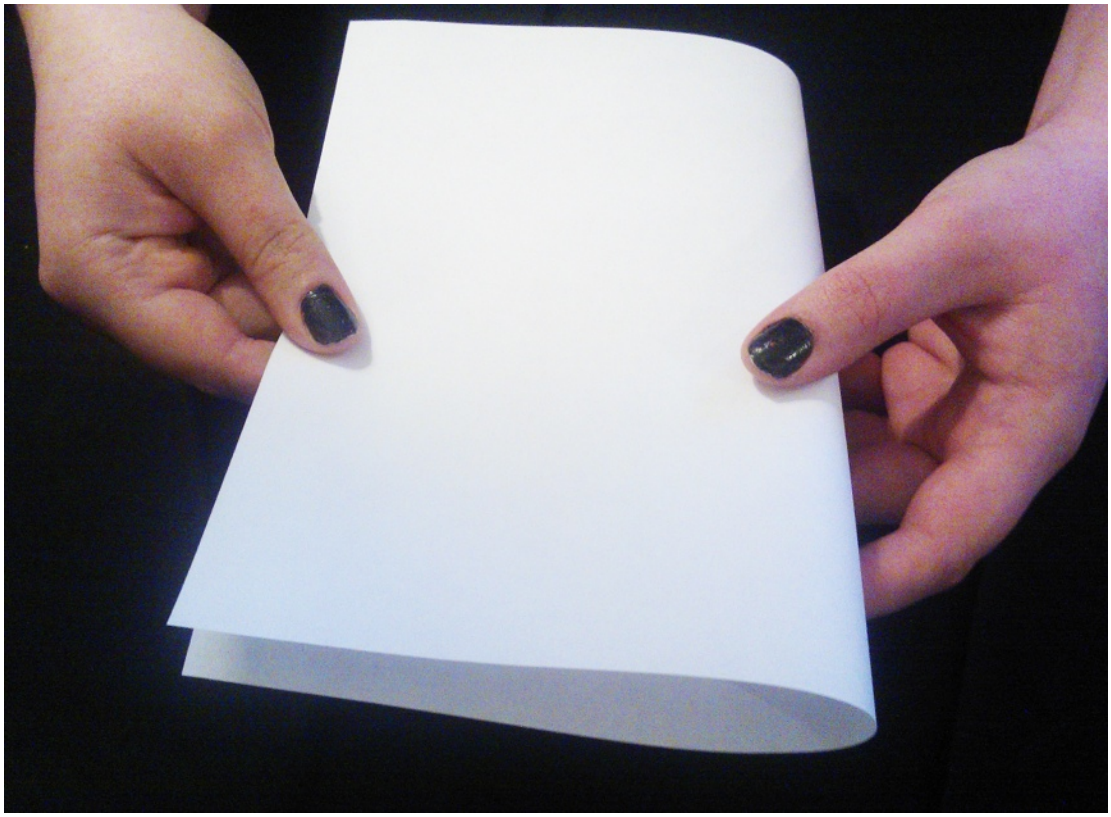

This is a really quick and easy way to make your home into a Winter Wonderland if you stick them on your windows or suspend them with string!

Tools and Materials:

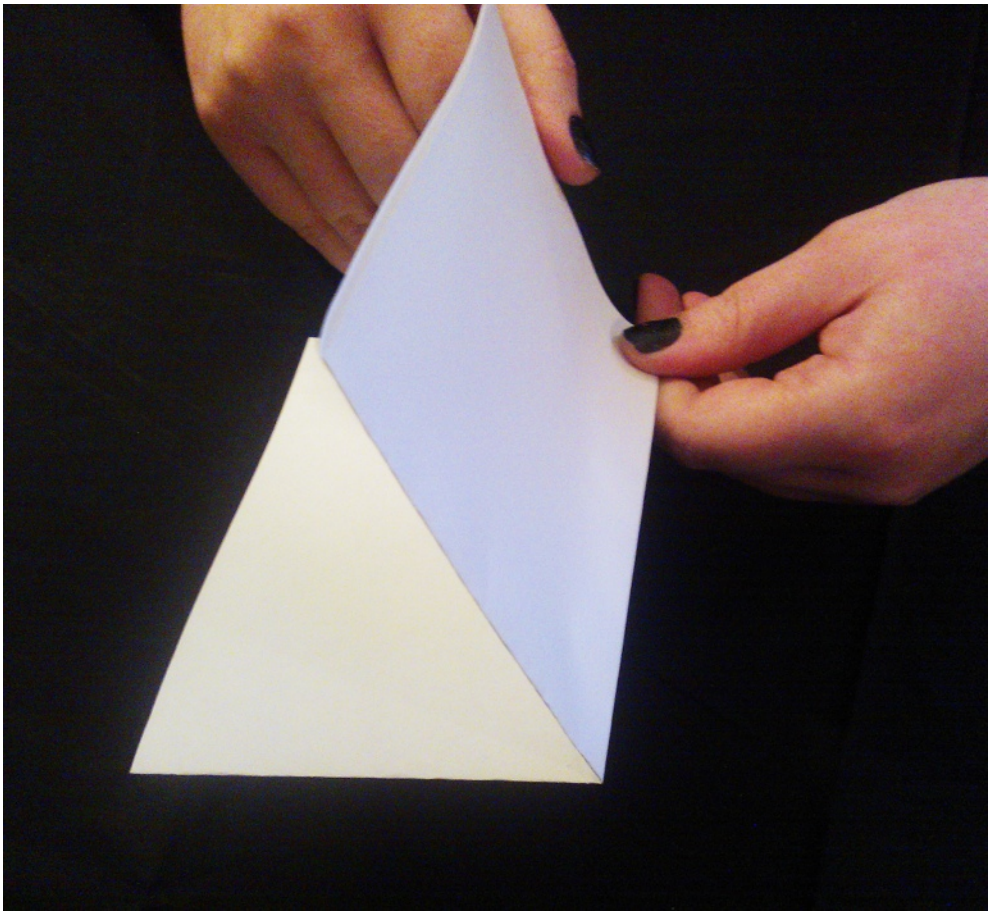

- A4 Paper
- Scissors

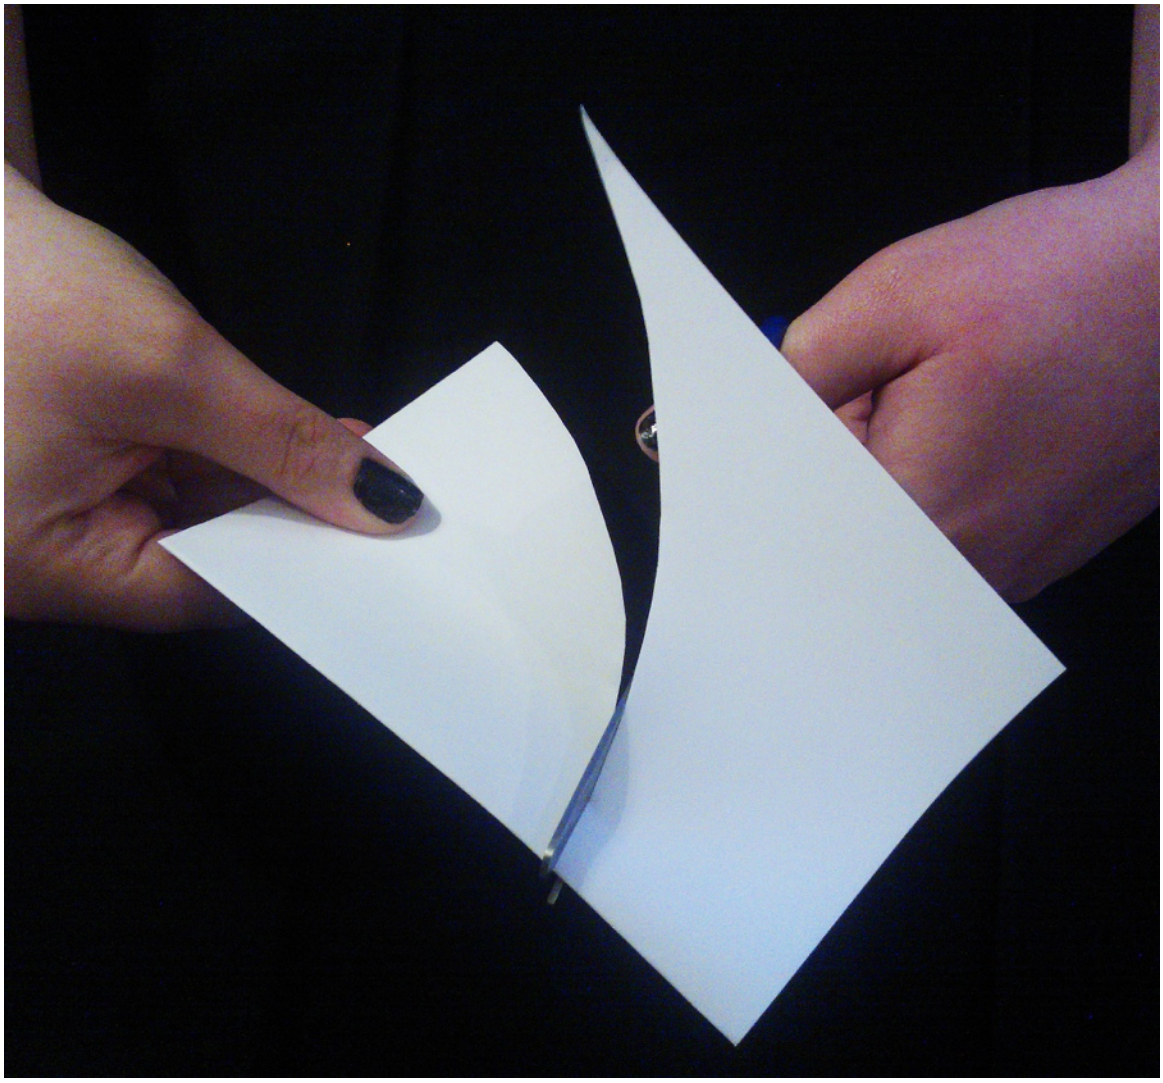

To start get your paper and fold it half like so

Then fold it in half again

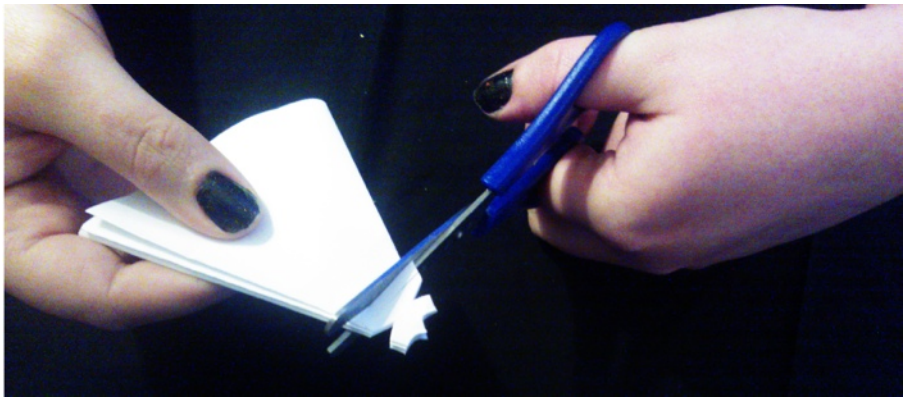

We have cut ours to be like a circle but you can leave the paper as a rectangle or square just to vary the results! So to cut it into a circle you need to cut a quarter of a circle, we have done it by sight but if you are stuck you could use a compass or the edge of a plate if it is the right size, anything you have to hand really that will help with drawing a curve!

Once it is cut into a circle fold it in half again like so

Now the fun bit! Cutting out your design! There is no right or wrong as to how you do this! Think about shape you like and work from that, for this snowflake we used hearts and curls, but you could cut out squares, diamonds, triangles or zigzags, the possibilities are endless!

Once you are happy with the shapes you have cut out you can unfold it, you should end up with a unique geometric snowflake like ours!

Here are some other Paper Snowflakes we have had to give you inspiration!
