Paper X-ray Machine

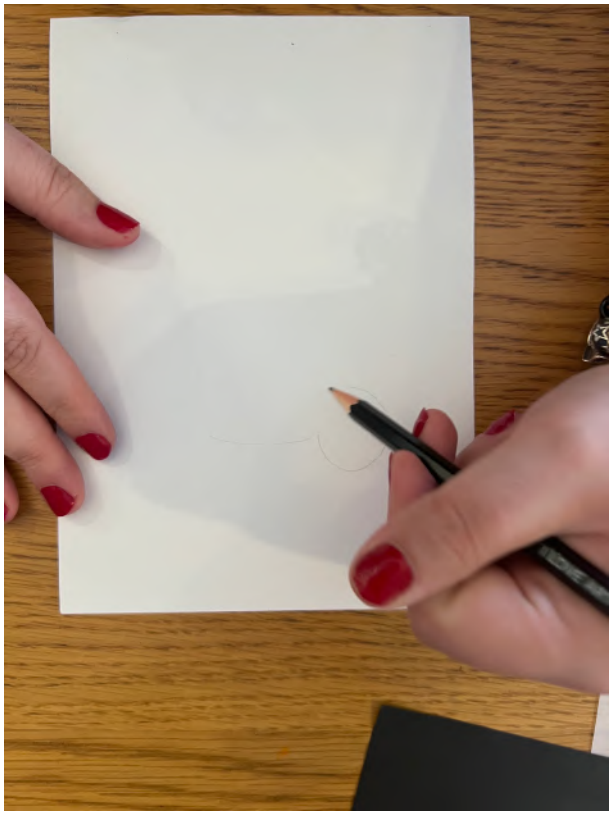

This could be done any time of year but it also makes a fun Halloween craft depending on character! Create your own “Paper X-ray Machine to think about how a character is fully formed - bones and all!

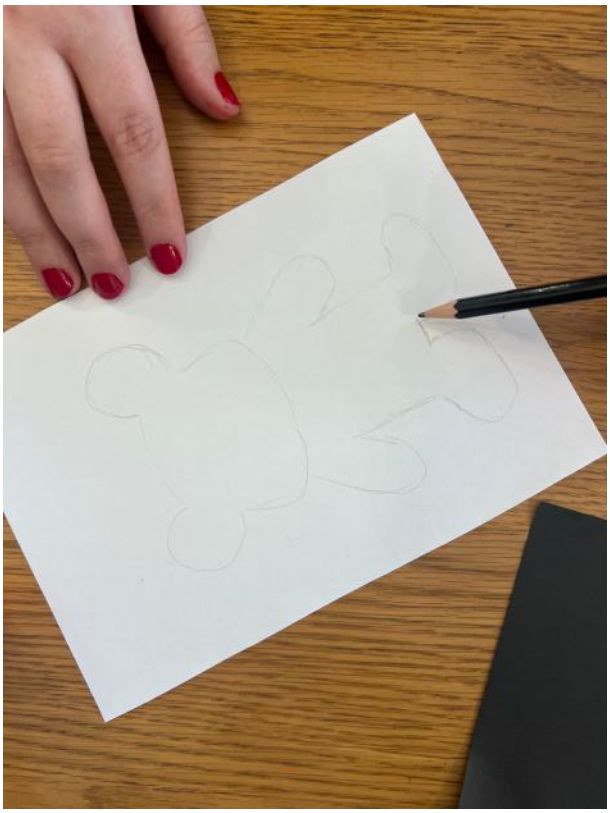

Tools and Materials:

- White Paper
- Black Paper
- Tracing Paper
- Pencil
- Gluestick
- Scissors
- Black Felt Tip

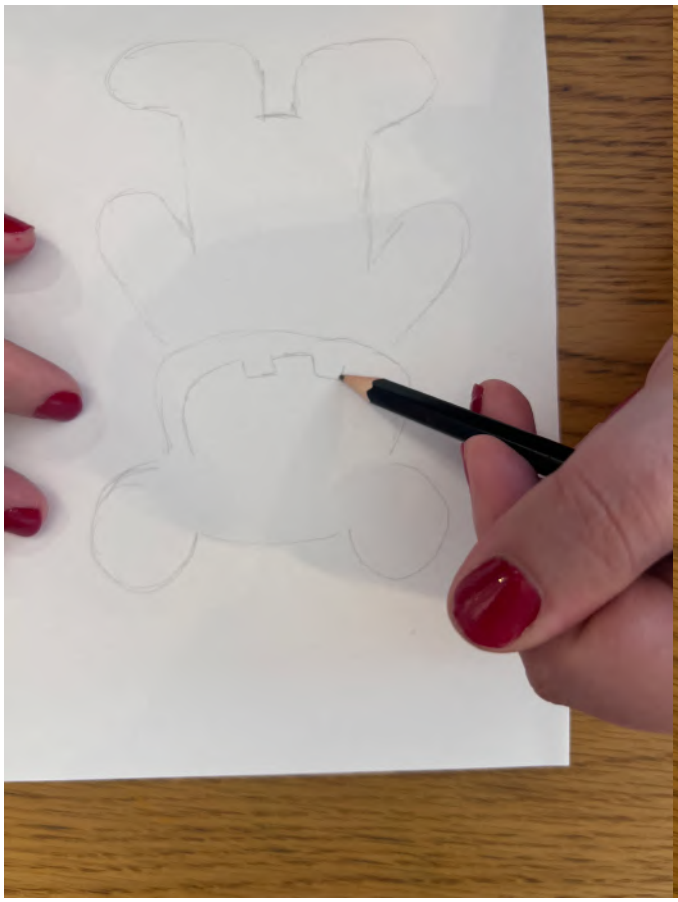

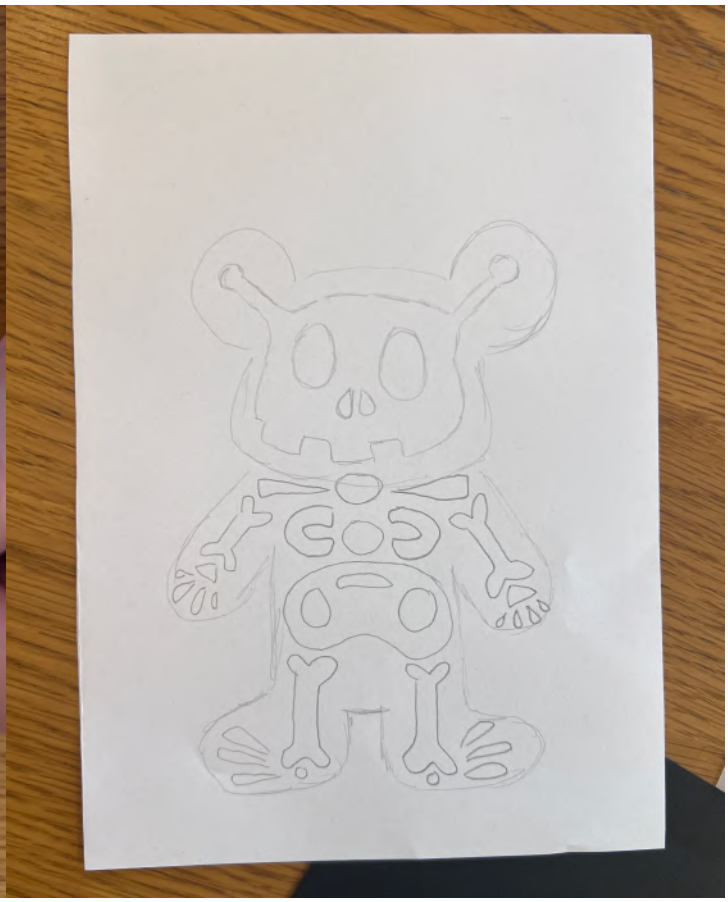

This is a harder craft but just take your time we started by sketching the silhouette of our character (the outline only)

Once you are happy with the out line you can think about what the skeleton might look like

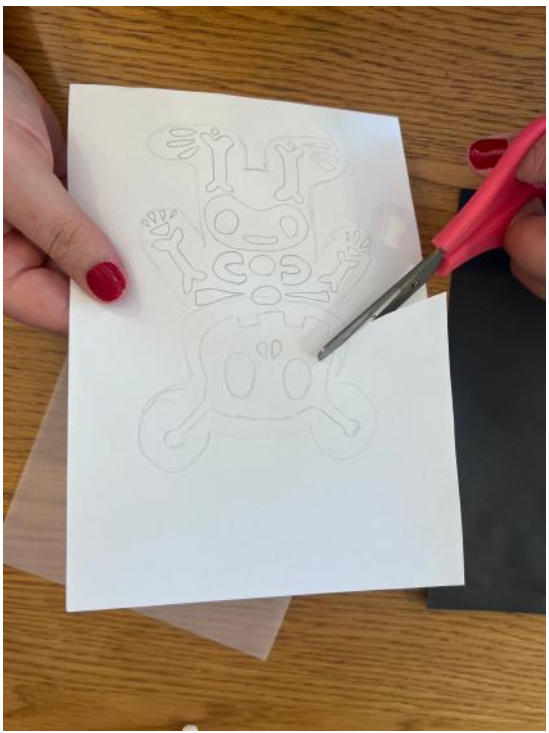

Take your tracing paper and follow the outline of the character but now you can add the details like facial features and other elements you want to illustrate

Now to cut out the skeleton - do it bit by bit and use the paper as a guide to stick it on you black paper so that the bones fit back in under the drawing on the tracing paper

Once you have glued all the bones down you should end up with something looking like this

Glue the top of your page to attach the tracing paper to the black background (x-ray)

There you have it your very own “Paper X-ray Machine”!

Here is another we made to inspire you!
