Plasticine Pictures

Plasticine is a great material to use because it is easier to bend than clay and it doesn't dry out so you can use it over and over again to make many pictures (or sculptures)!

Tools and Materials:

- Plasticine
- Scissors (you can use other things to model the plasticine with such as rulers, pencils etc - see what you have round the house!

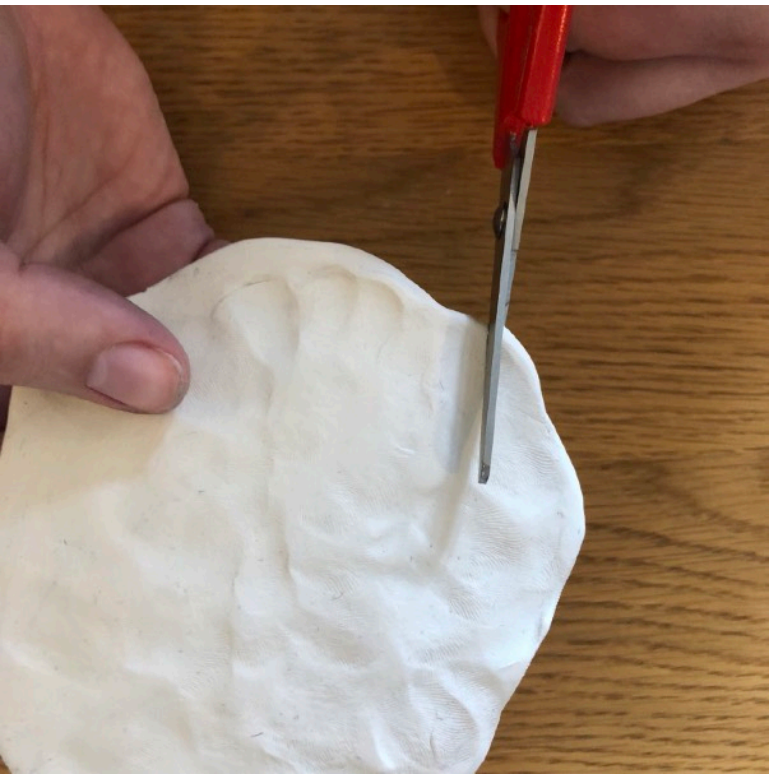

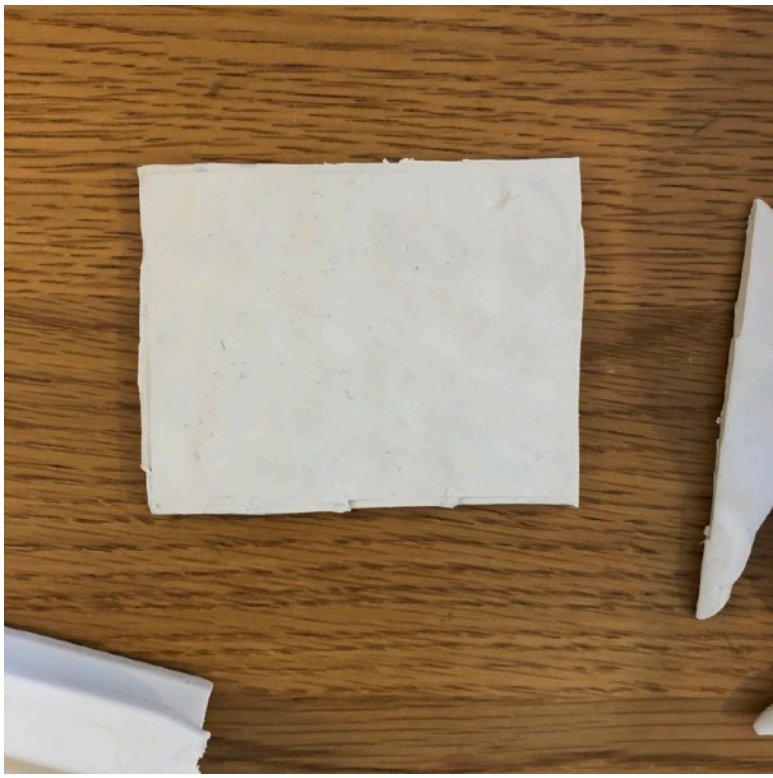

Taking some of your plasticine roll it around in your hands till it warms up and is easier to use - because we are making pictures we want a flat background to attach your picture to so start pushing it flat with you finger tips

When you are happy with it you can cut it with scissor to get your base - we chose a rectangle

Most pictures in galleries have ornate frames so we thought it would be fun to create one with scissors making patterns, rolling out some of your other plasticine to create a raised edge - then create your pattern with scissors.

Then you can go about creating your picture - what will you be inspired to make? If you photograph each creation you can record the masterpieces you've made!

There you have it your very own Plasticine Picture!

Here’s another we made to inspire you!
