# Pop Up Populus

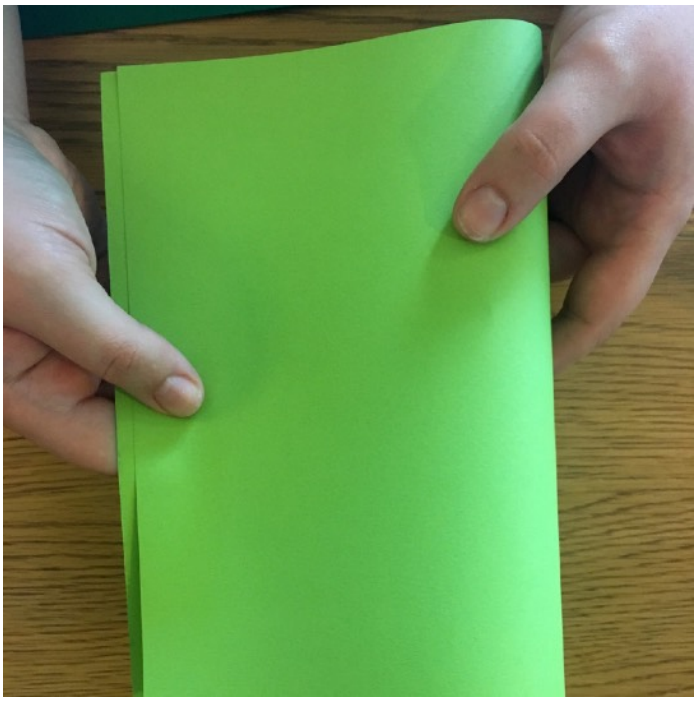

Looking at elements of engineering - if you had to design a city what would its population need?

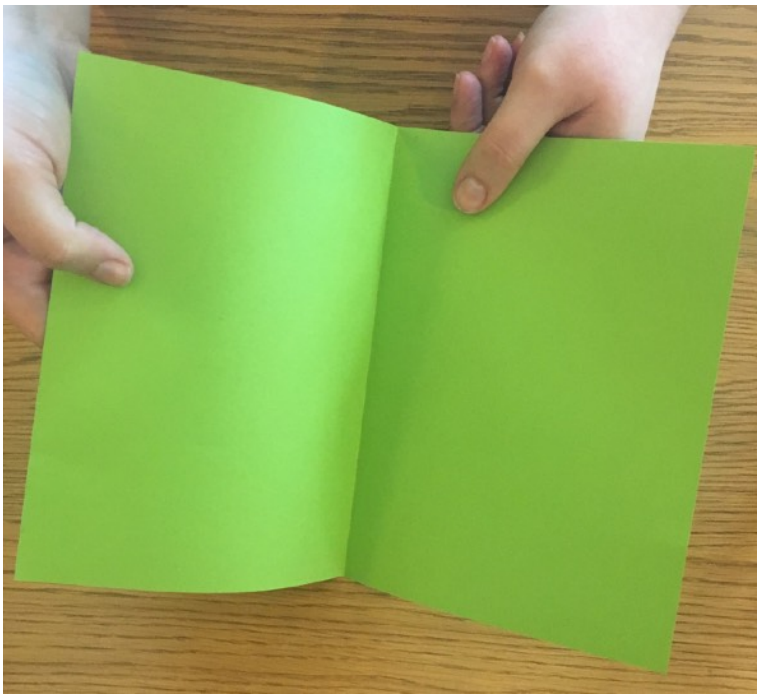

Tools and Materials:

- Coloured Paper
- Sellotape
- Pencil
- Scissors
- Glue Stick

So we chose two colours to contrast for this piece of work - choose one for the background and fold it in half like so

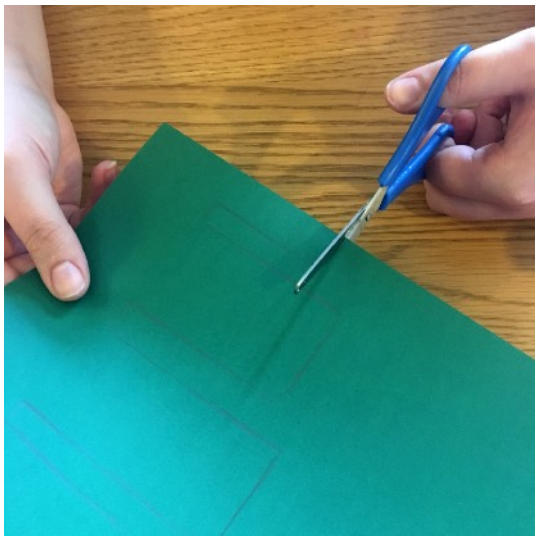

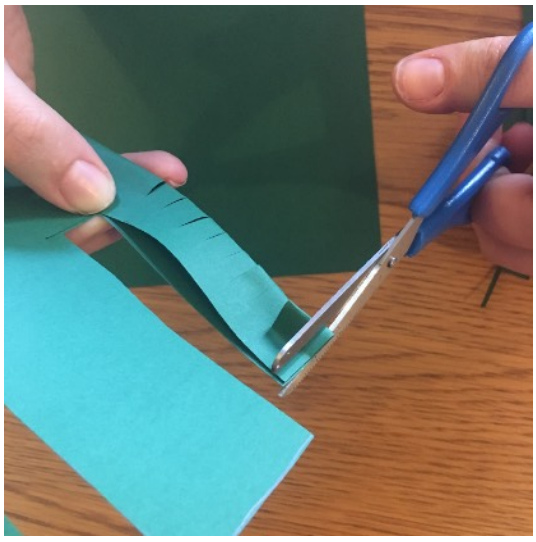

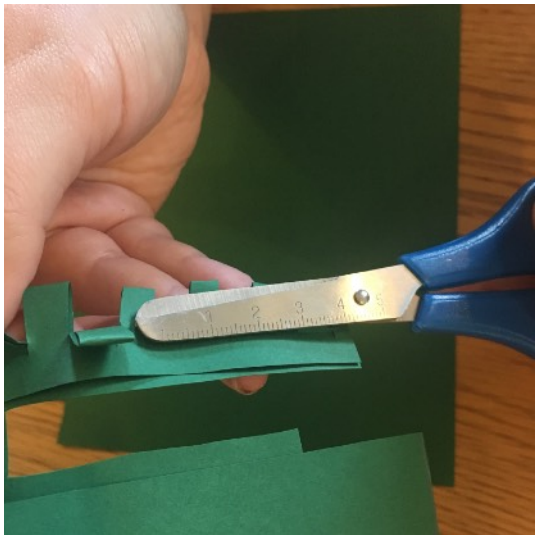

Take your other piece of paper and start cutting out buildings and other features for your city scape - don’t forget to leave a bit to fold to stick it

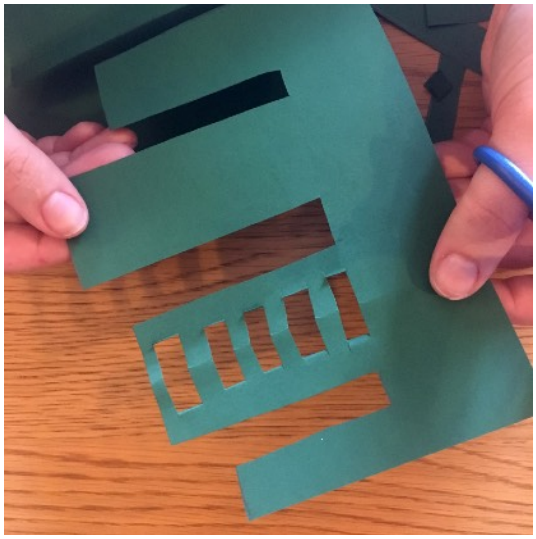

Cut all the bits you've drawn out and then you can start cutting into them to add detail such as windows like so

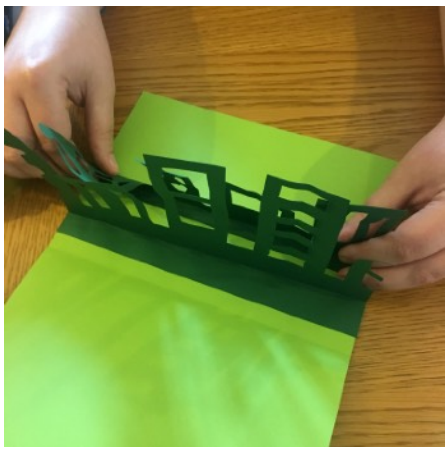

Then you can start attaching them - to your base, fold an edge to give them a lip to be glued to your base like so

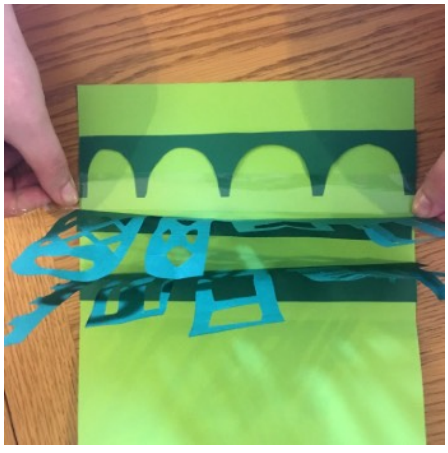

Space the layers out to add depth - usually about 1-2cms between them so you can get the desired effect

And there you have it your very own “Pop up Populus”

Here’s another we made to inspire you!
