Rainbow Continuous Line Drawing

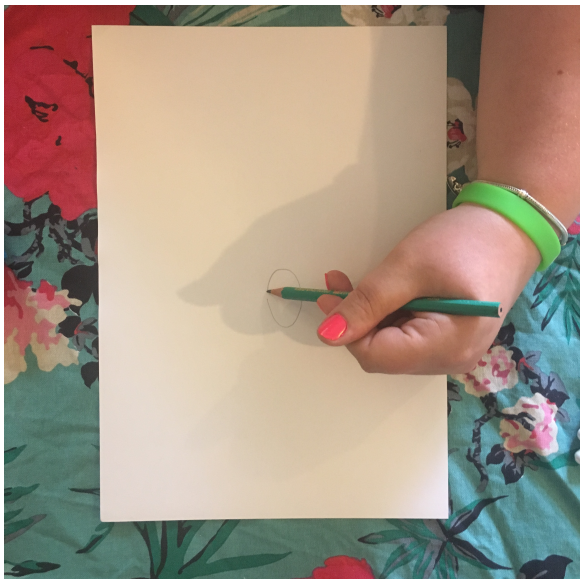

“Continous Line Drawing” is a great way to enhance your forward planning, spatial awareness plus simply have fun as your drawing can end up with different sections of colour

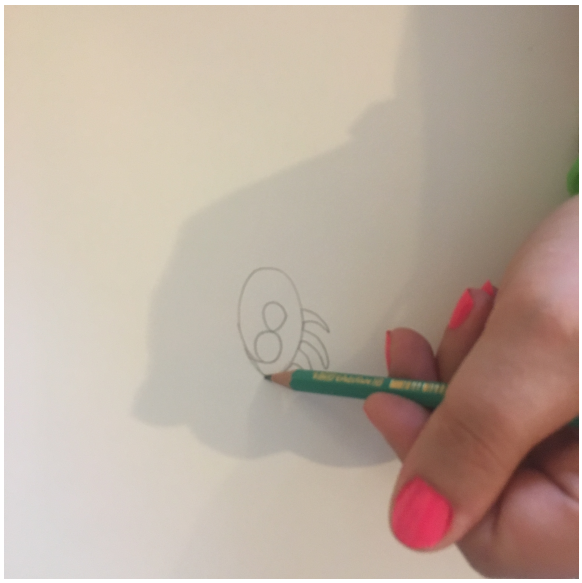

Tools and Materials:

- Paper
- Felt Tips
- Pencil (you can go straight into the drawing with a black felt tip if you like!)

Taking a black felt tip or pencil whichever you prefer start thinking about what you might want to draw - or you can just let your hand move and you can figure what the shape looks like. We like unicorns so thought would be fun to draw that! Try and keep your pencil on the paper (we took ours off for the eye - but the rest is about planning the journey of your mark making)

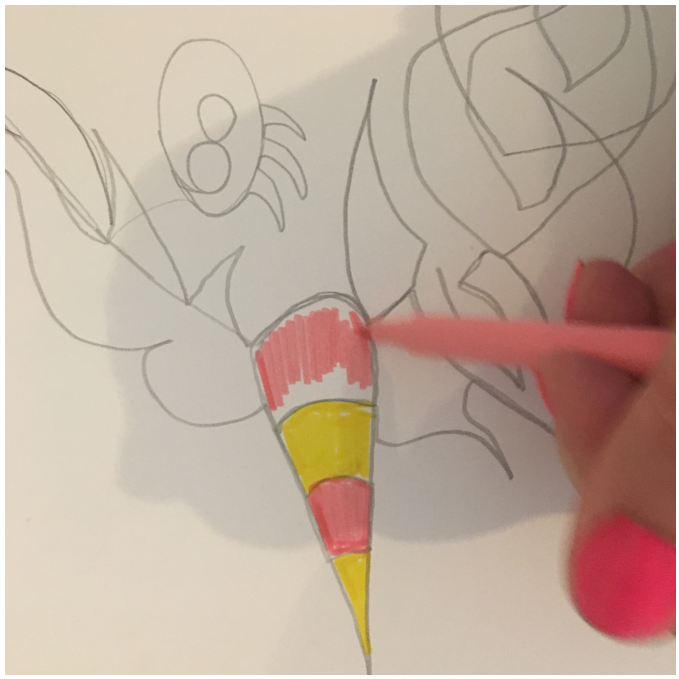

Now you can start to colour your work in - where the lines are try not to have colours touching as it makes the drawing look more interesting with different sections of colour

If you drew in pencil you can black outline the drawing after just to make it pop more - like so

There you have it your own
“Rainbow Continuous Line Drawing”
