Paper Marbling

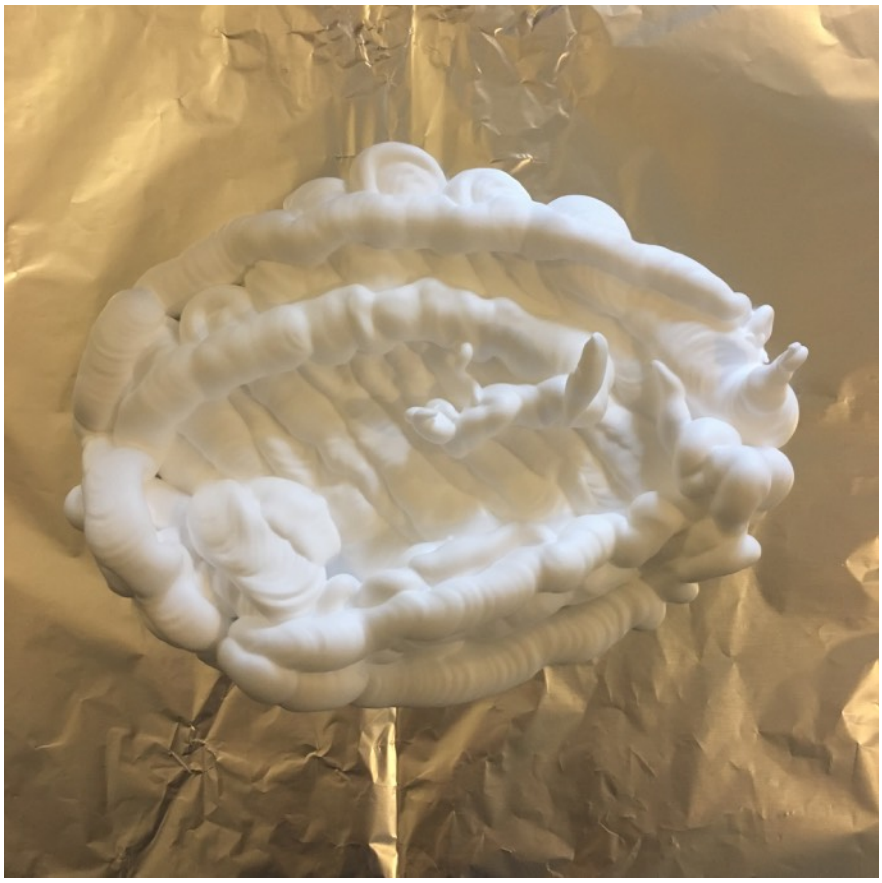

This is a super fun and inexpensive way to create your own marbled paper at home!

Tools and Materials:

- Kitchen Foil
- A6 Paper
- Straw
- Shaving Foam
- Coloured Inks

Using the kitchen foil as a base - squirt some of the shaving foam in the middle

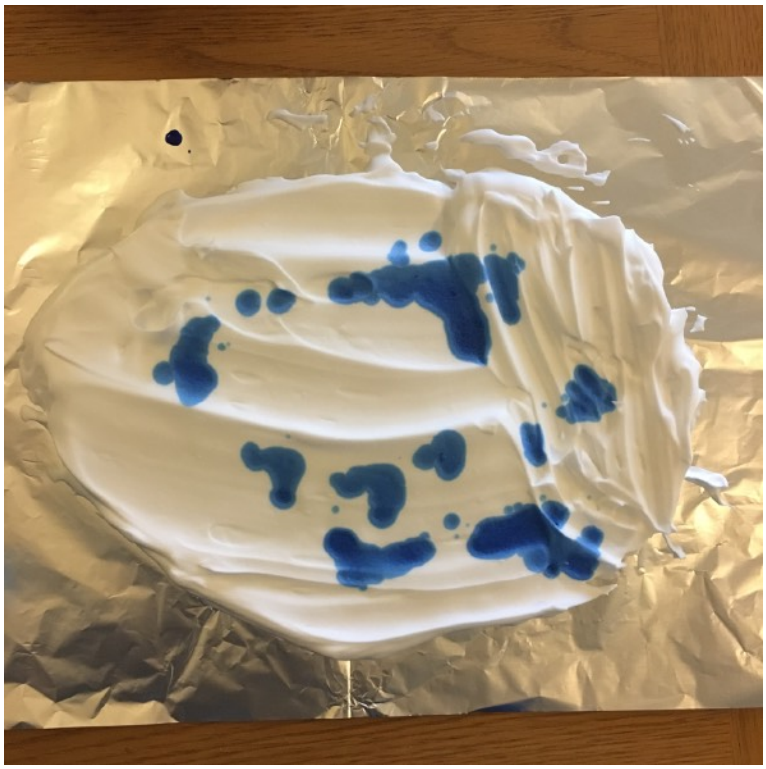

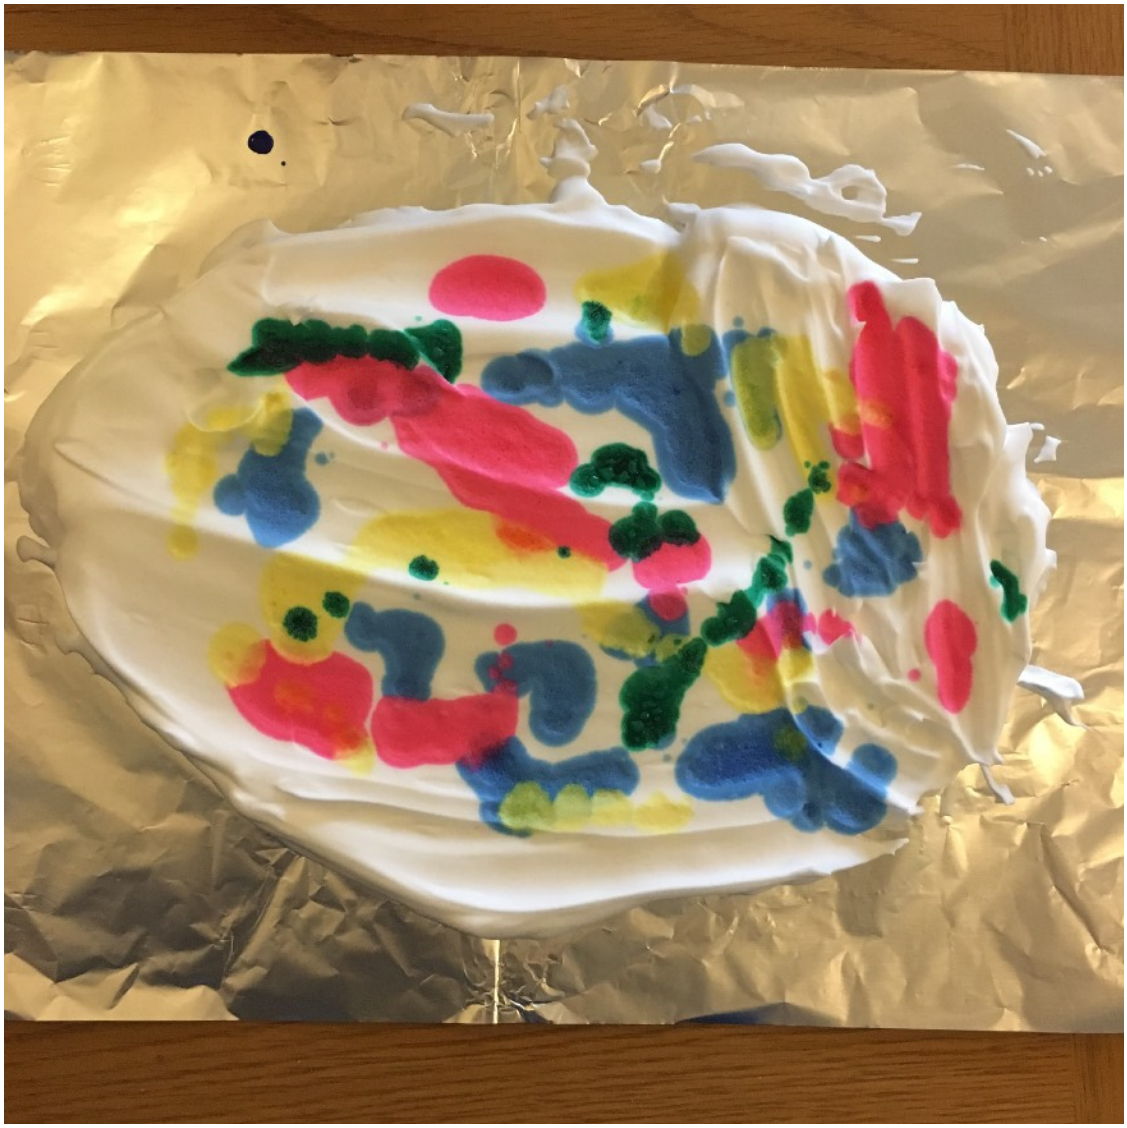

Then for the fun bit! Smooth it out with your hand like so

Then you can start dropping your colours on - we used ink but food colouring works just as well!

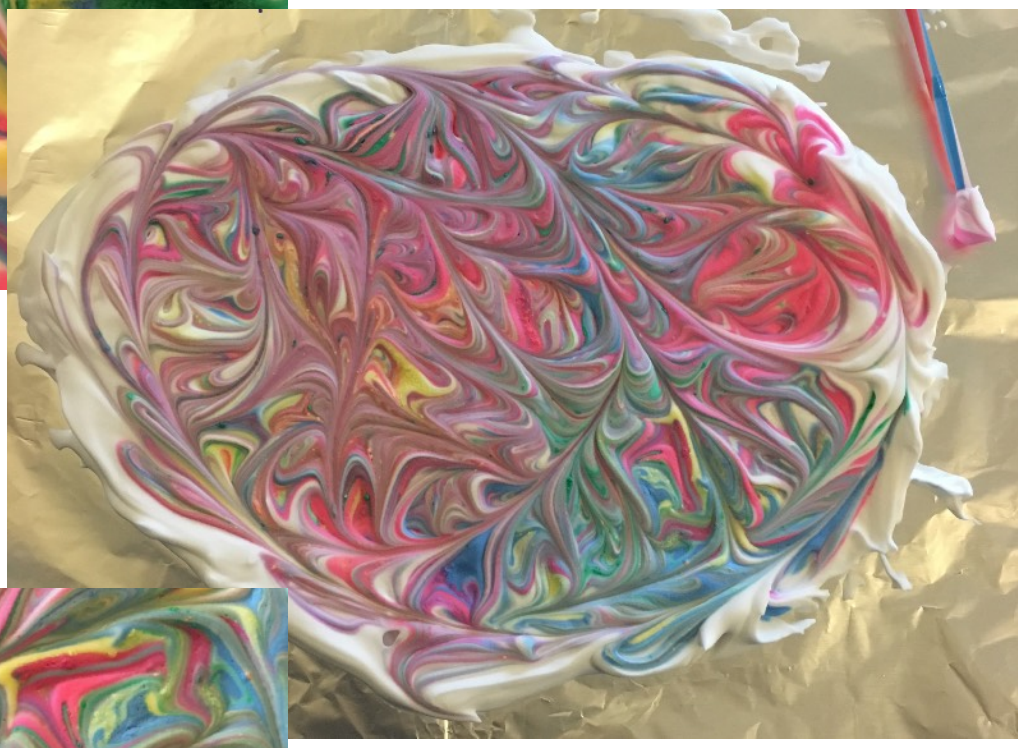

Then using your straw start drawing into the ink to marble them - mixing the colours together

Drop your piece of paper on top of the foam and push it down into the foam to make sure it is covered

Leave it on the foam for around 10 seconds then peel it off

The longer you leave the foam on the paper the more intense the colour will be so play around with the timings - once you are happy then wipe the foam off!

And there you have it your very own marbled paper!
