Shoebox Guitar

Fancy getting musical - why not create your own guitar out of household junk!

Tools and Materials:

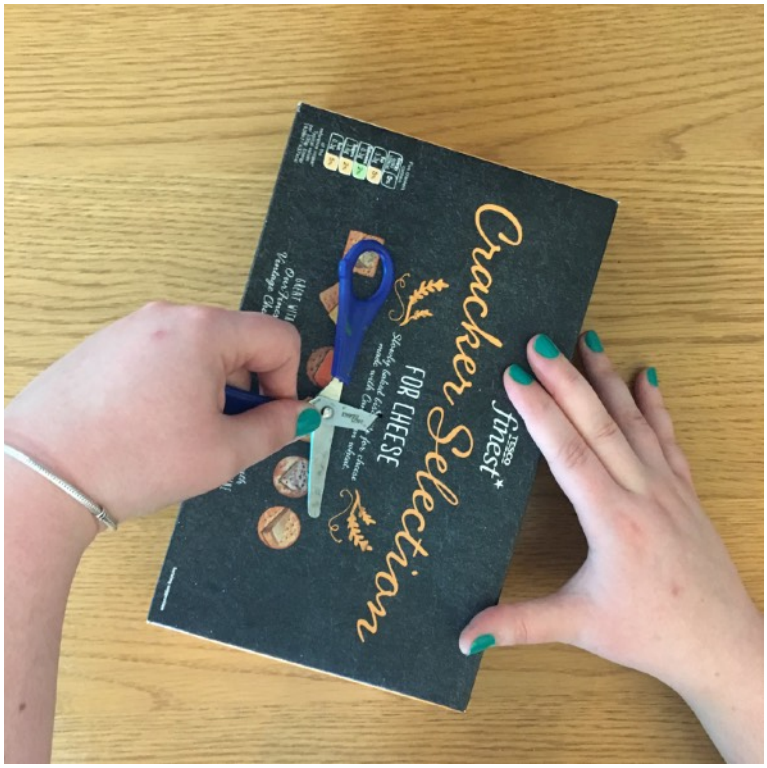

- Cardboard box (Shoebox, Cereal Box etc)
- Coloured paper
- Scissors
- Rubber Bands
- Glue
- Sellotape

First of all tape the opened end of your box up (only if it is a cereal box shoe box you can tape the lid on after)

Then cut a hole in the middle of one side to make a hole for your guitar - you might need an adult to help with the first cut

Then make holes for the strings to be added through - 8 in total 4 either side like so

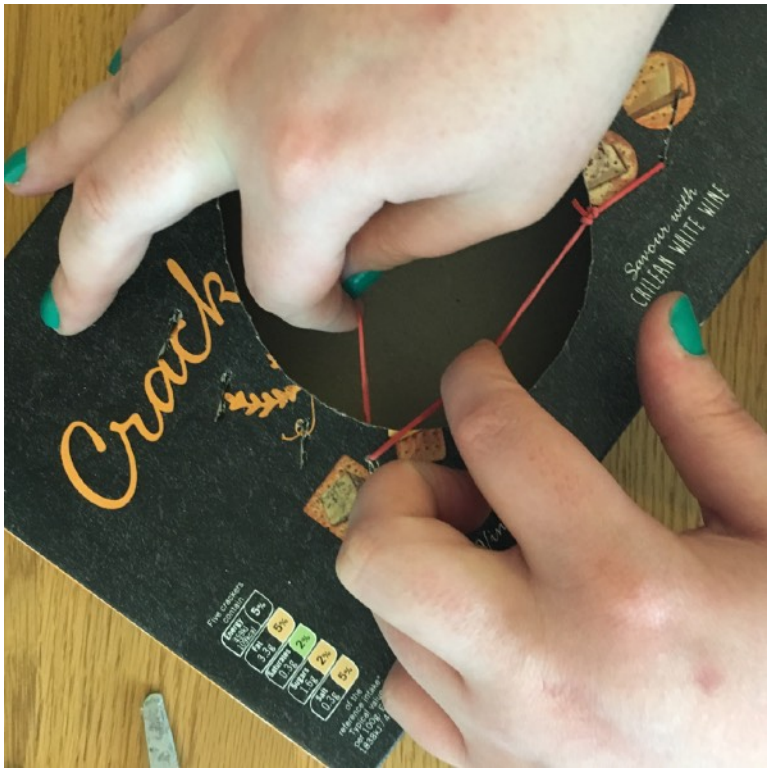

Then take your rubber bands and cut them so they are rubber strings

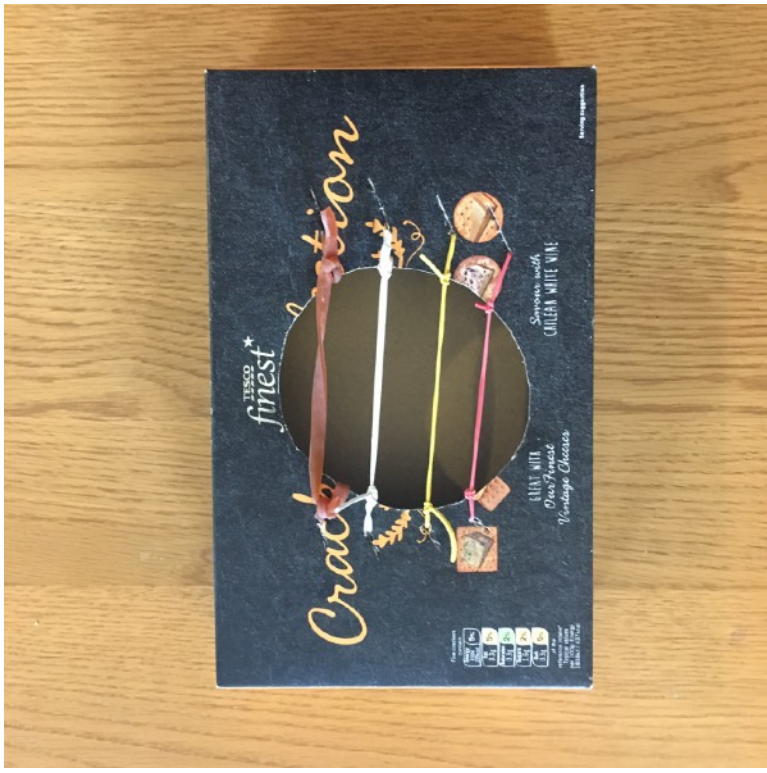

Different bands create different noises depending on thickness, length and how tight they are pulled - play around to tune your guitar before tying the knot!

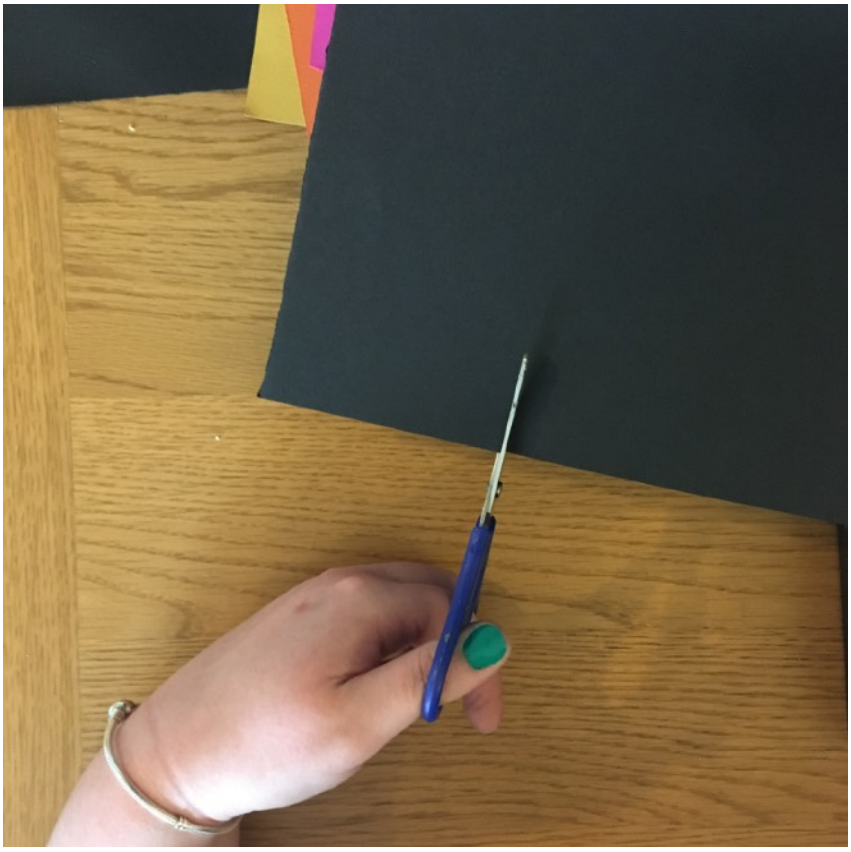

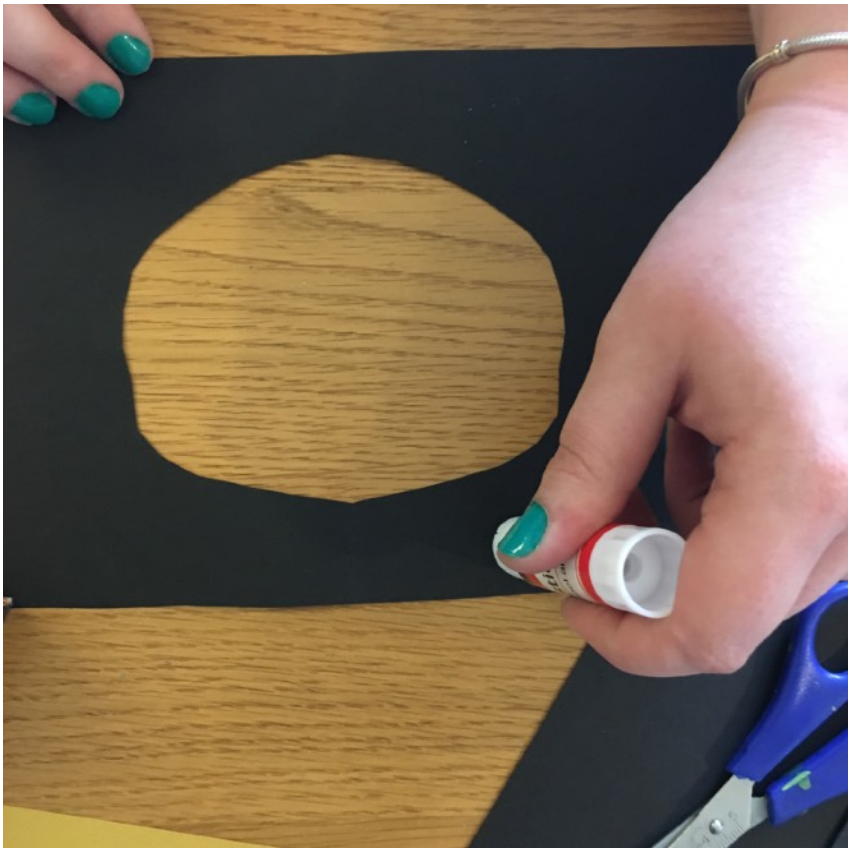

Now you have the body of your guitar you can begin to decorate it - we chose black paper as a background to embellish - measure, cut and glue to your box!

And there you have it your very own Shoebox Guitar!
