Stencil

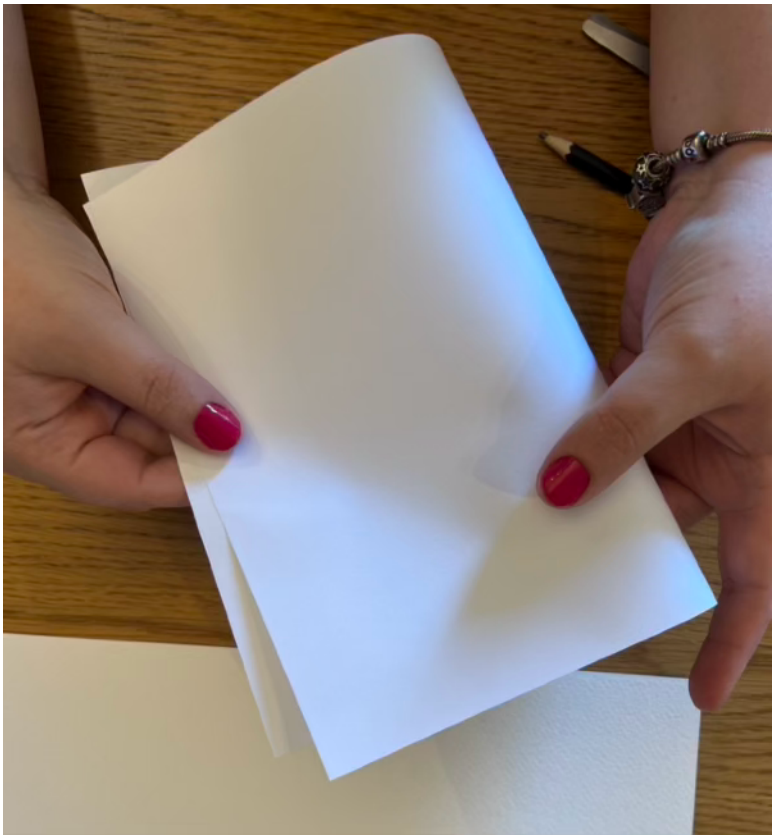

Create your own simple paper stencil to repeat shapes to create an artwork in its own right, build up a background or layer shapes for depth!

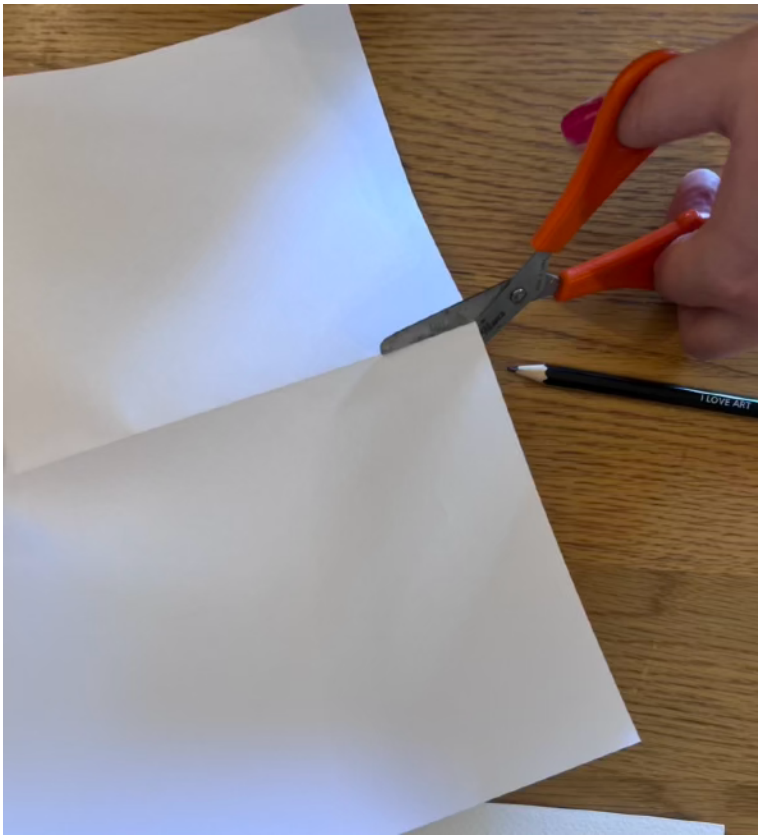

Tools and Materials:

- Paper
- Pencil
- Acrylic Paint
- Scissors
- Kitchen Roll

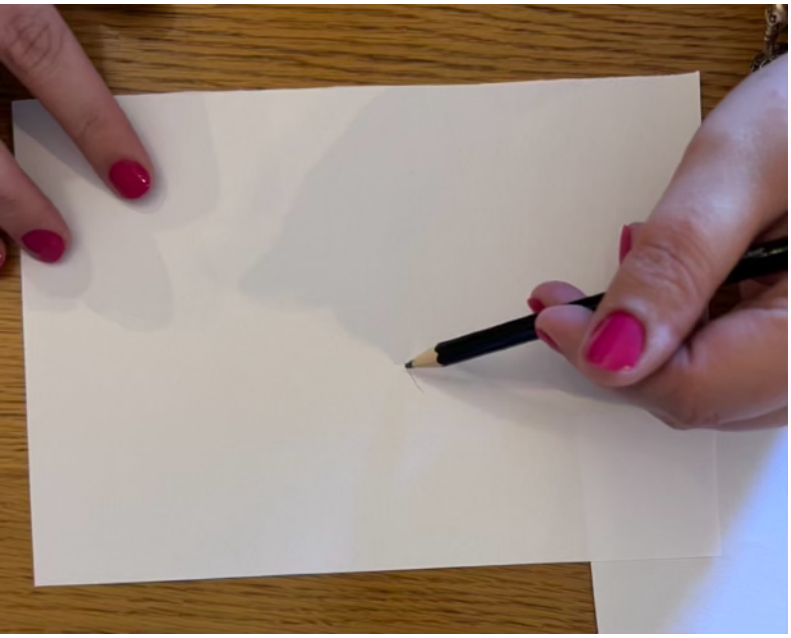

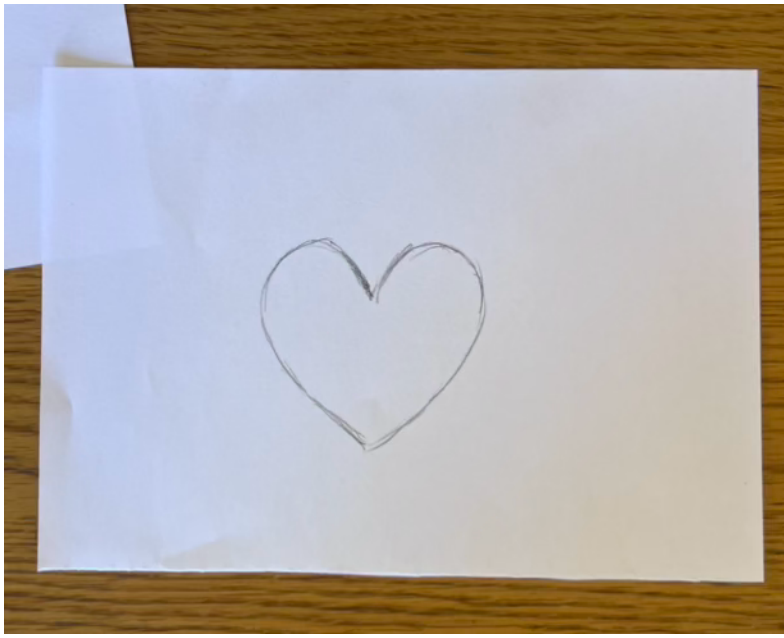

We used some printer paper to make the stencil and slightly thicker paper to stencil on to. Take the thinner paper and fold it in half (to make a small/medium stencil) and cut it giving you stencil paper and also a makeshift palette

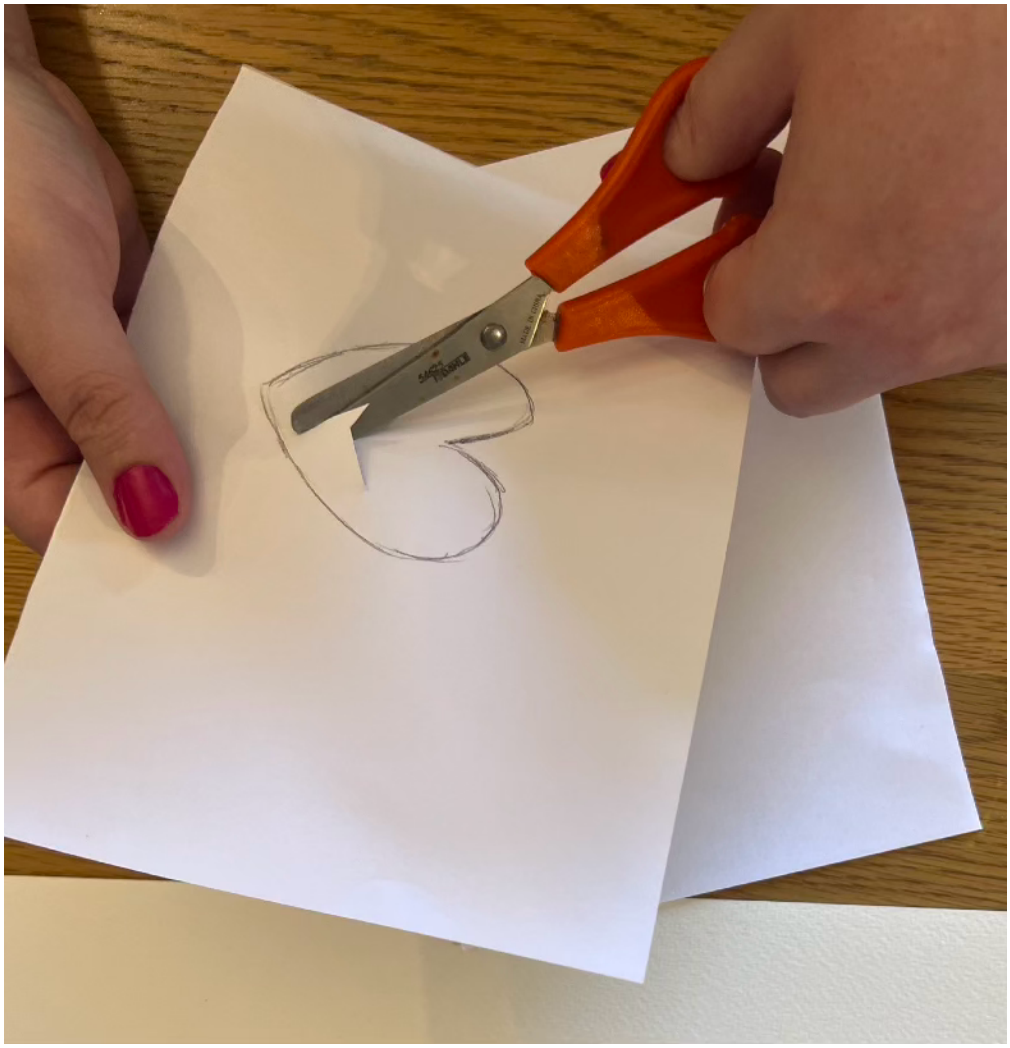

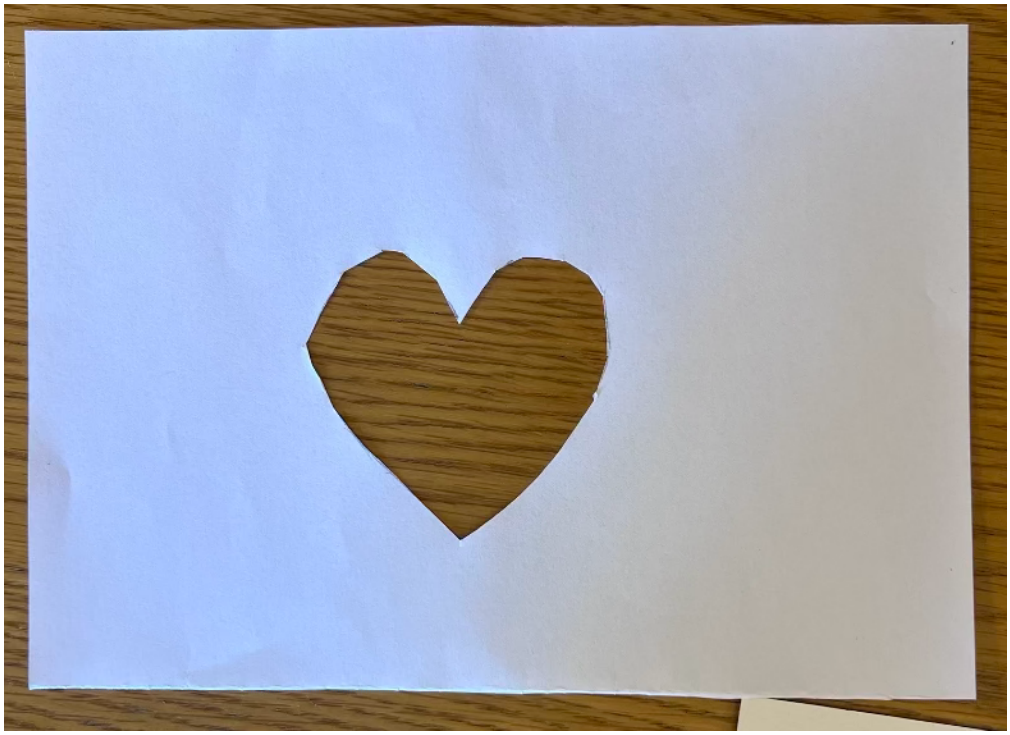

Then sketch out the shape you want to stencil we went for a simple heart like so

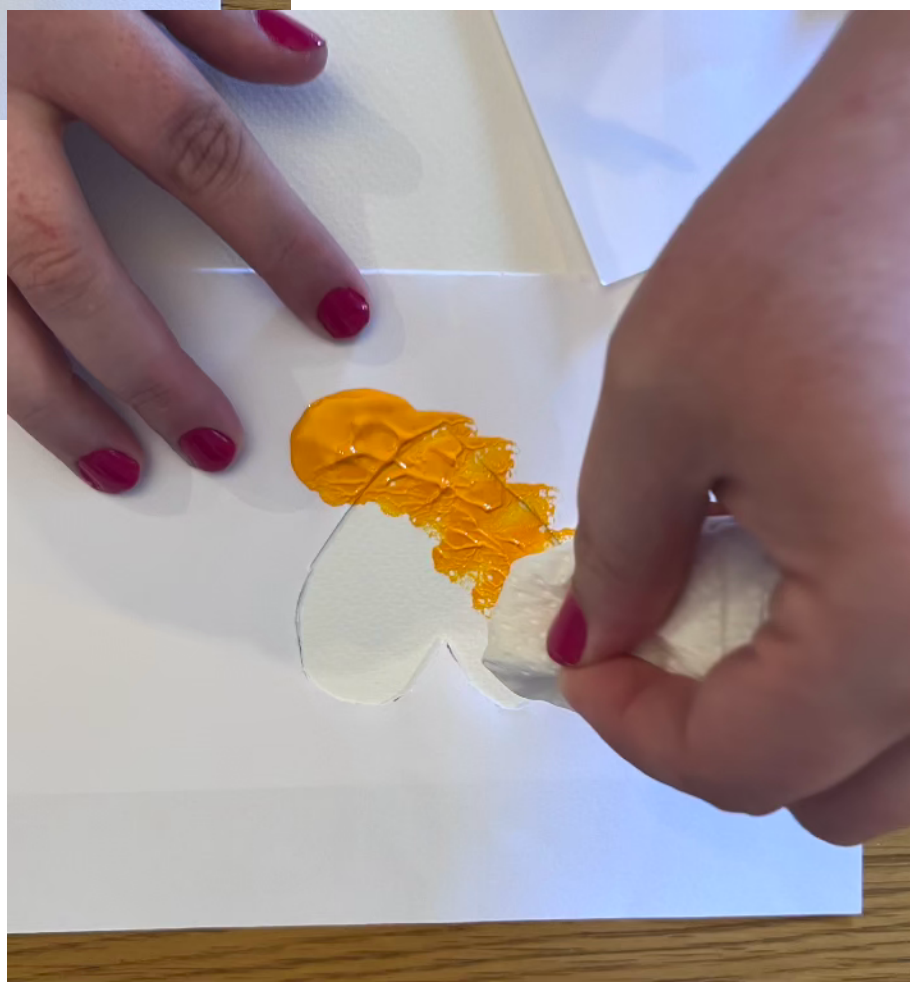

Once happy with the shape then cut it out so it ends up looking like this - it is important to not cut a gap in the outside of the heart you want it to stay whole as is easier to stencil. Fold the paper to cut out the middle more easily

Now to get to stencilling! Use your kitchen roll to apply the paint you can dab it in one colour or 2 at the same time and gently press down into the heart shaped hollow like so

There you have it your very own “Stencil”!

Here is another we made to inspire you!
