Summer Lantern

This is a fun and easy way to create your own lantern you can use in the garden on summer nights - or bring the outdoors indoors when the weather isn't so good!

Tools and Materials:

- Tracing Paper
- Ice Lolly Sticks (we used 14)
- Scissors
- Felt Tips
- Sellotape

First of all you need to construct your frame - the lantern has 4 sides you can make two frames with 4 lolly sticks and join the other two with 2 sticks. Tape each corner to secure.

Then take your tracing paper and measure it against your frame like so

So you should end up with two frames like this and then you can decorate them. Sellotape drawings on the inside.

Line up your two finished panels and place 2 lolly sticks between them

Measure more tracing paper to fit over the frame and repeat for the last section

Draw on all your panels and fix with sellotape, then tape the inside of the last sections together to make a cube

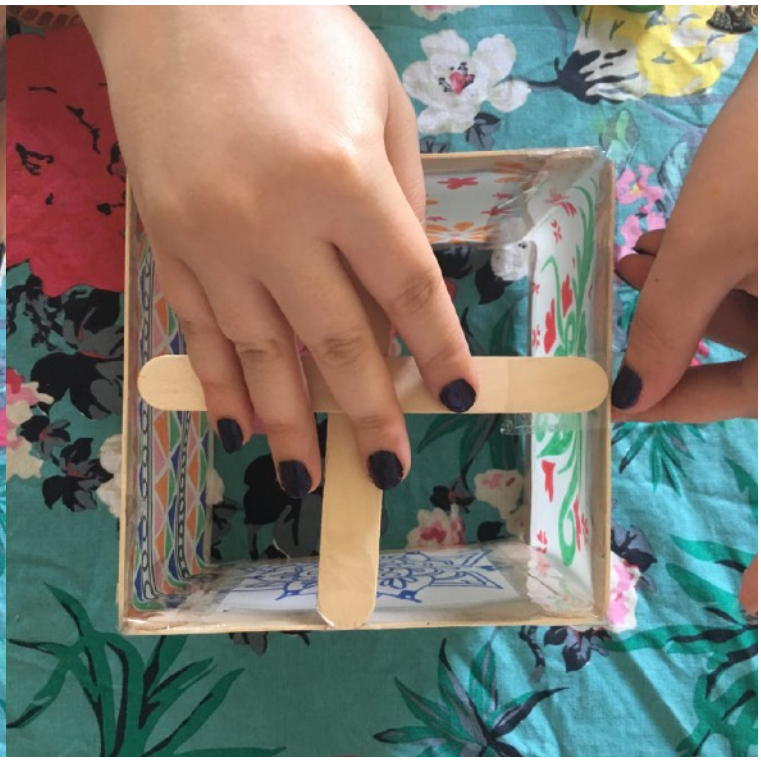

For extra stability we will make a crossbar for the under side of the lamp

We recommend using an LED night light in it not a real candle just for safety!

And there you have it your own “Summer Lantern”
