Thaumatropes

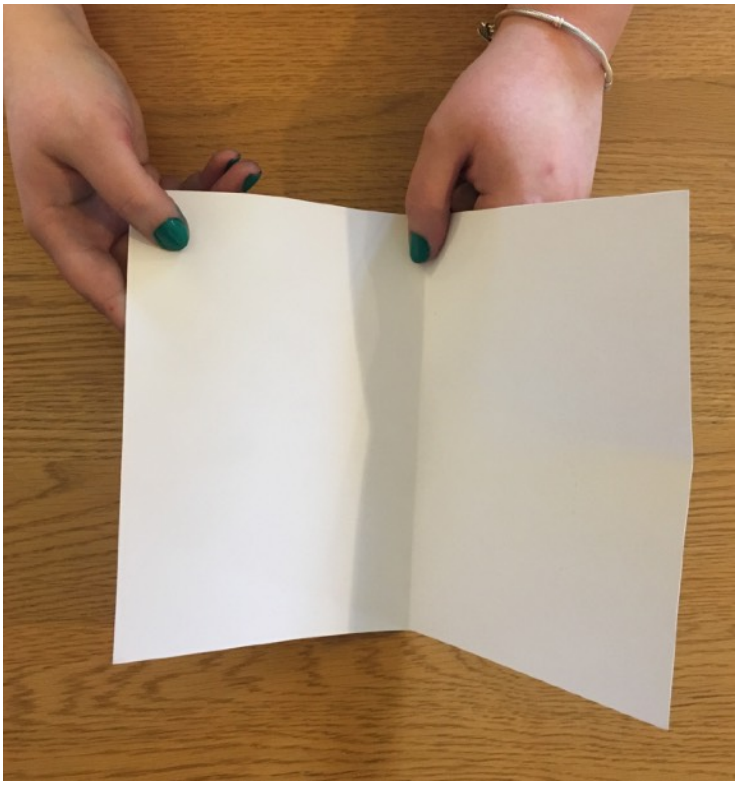

Thaumatropes are an optical illusion usually done on two sides of a spinning disc which join together to look like one image

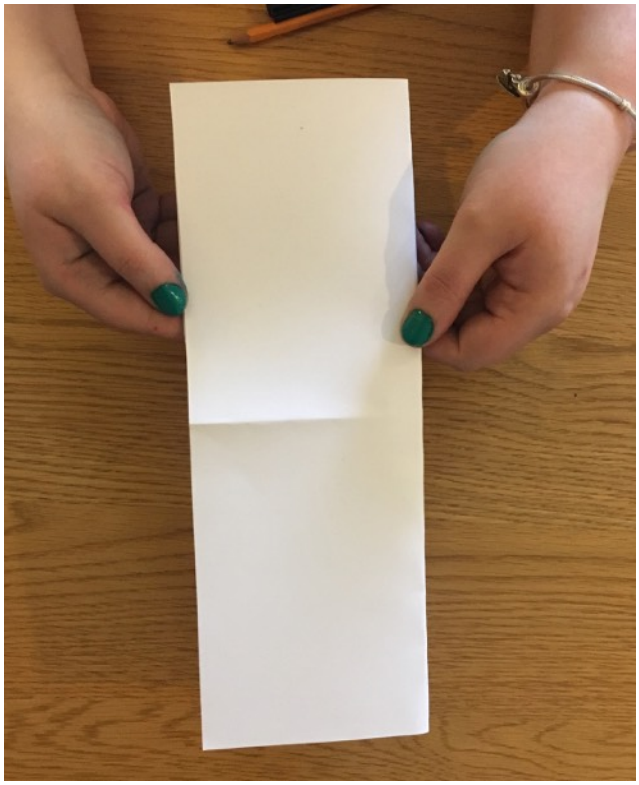

Tools and Materials:

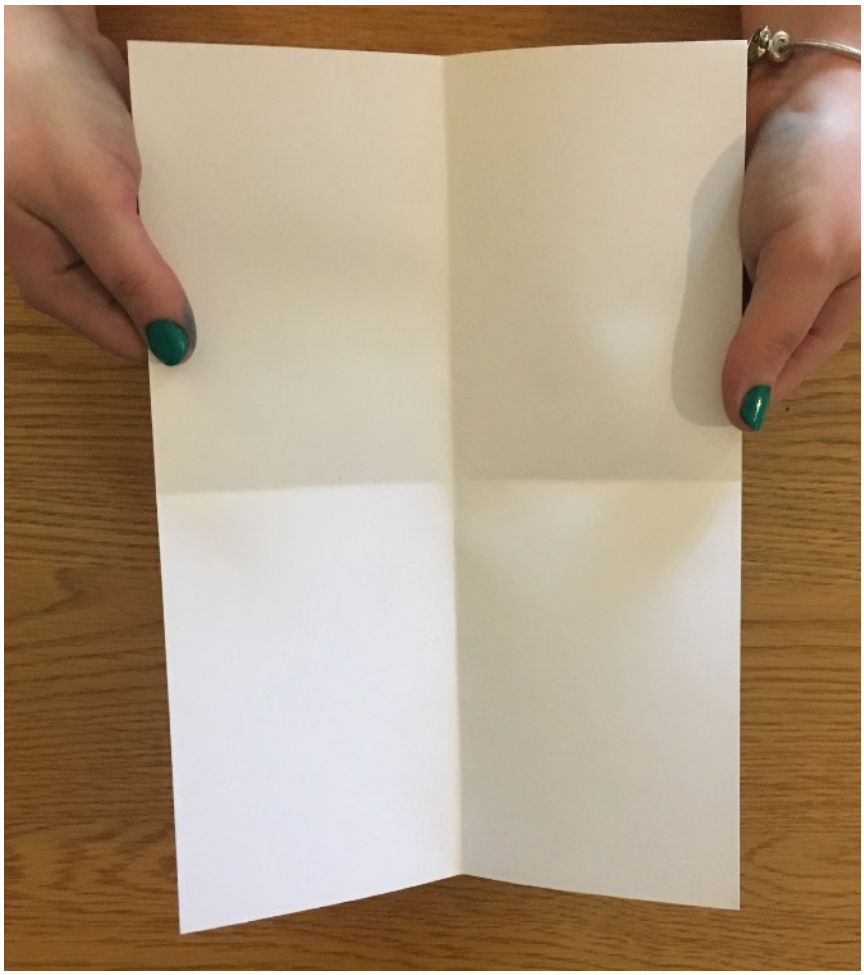

- Paper
- Black Marker Pen
- Scissors
- Pencil
- Sellotape

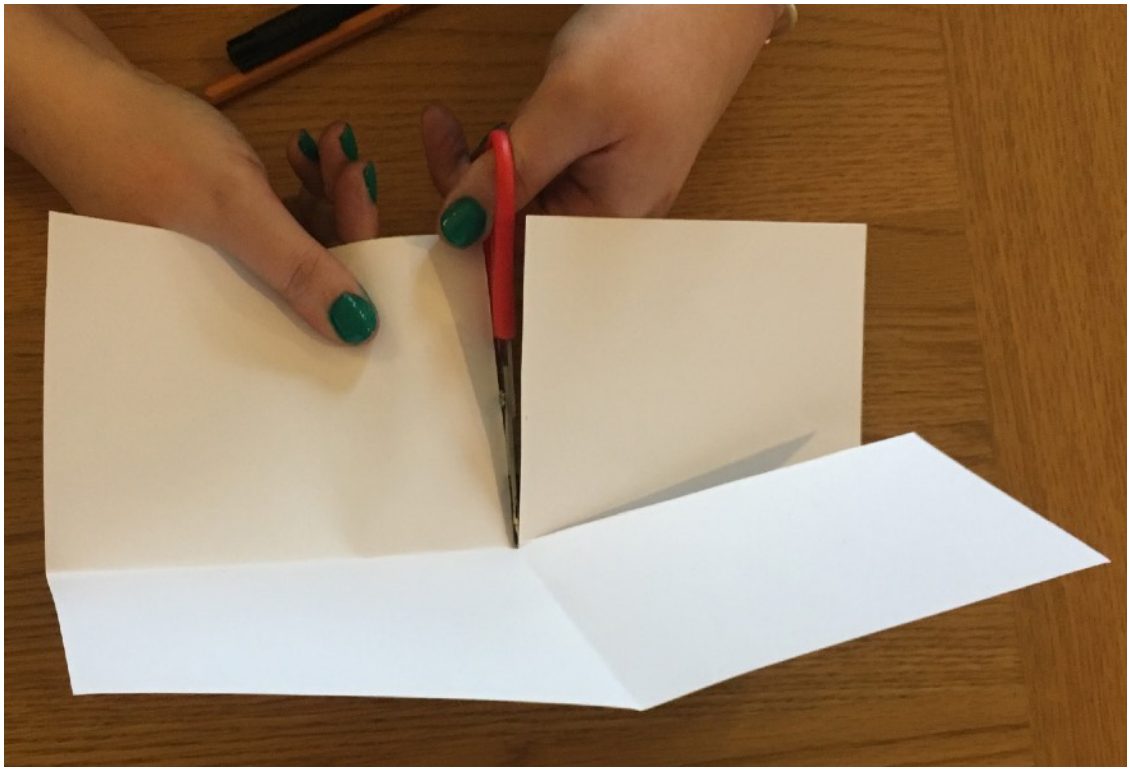

Taking a piece of A4 paper fold it into quarters like so

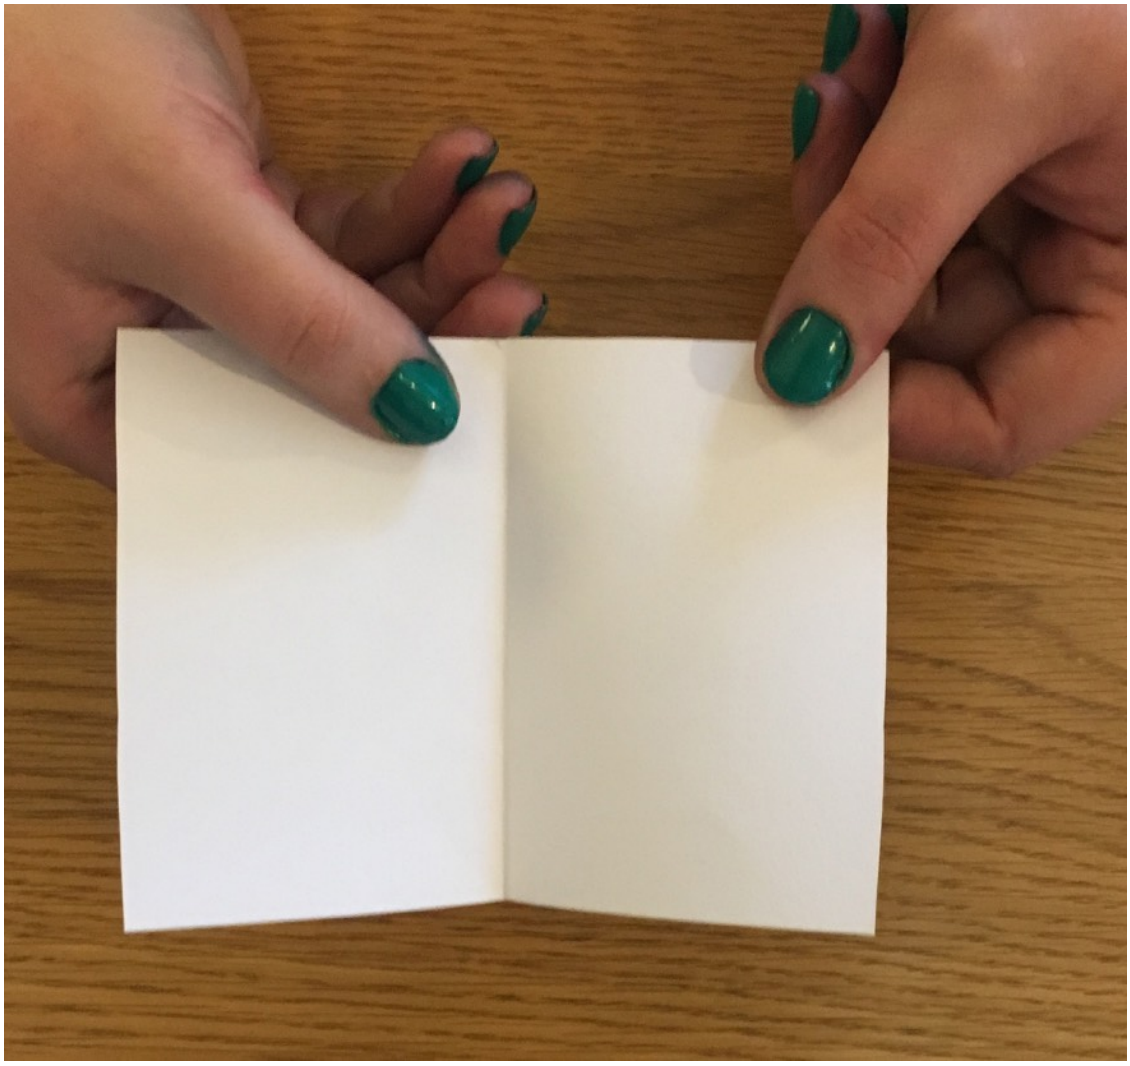

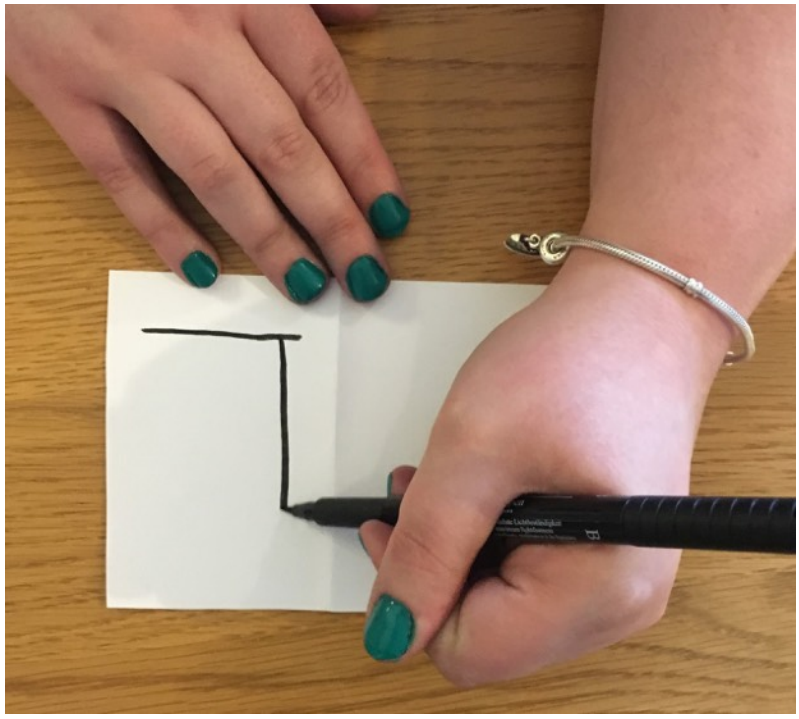

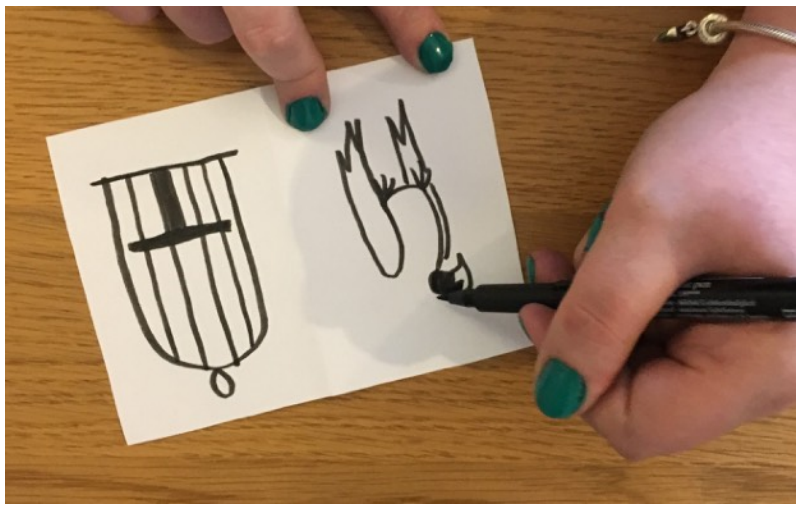

Then cut your paper in half across the narrower length

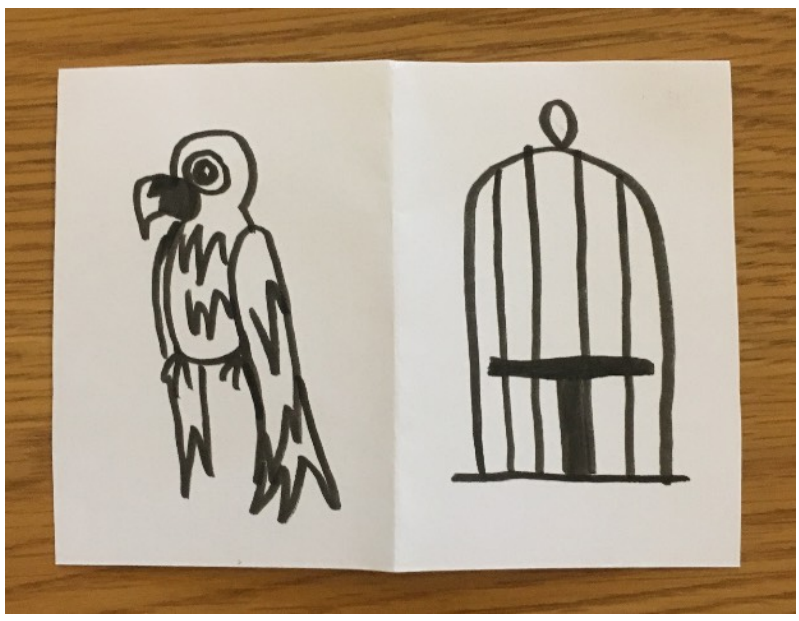

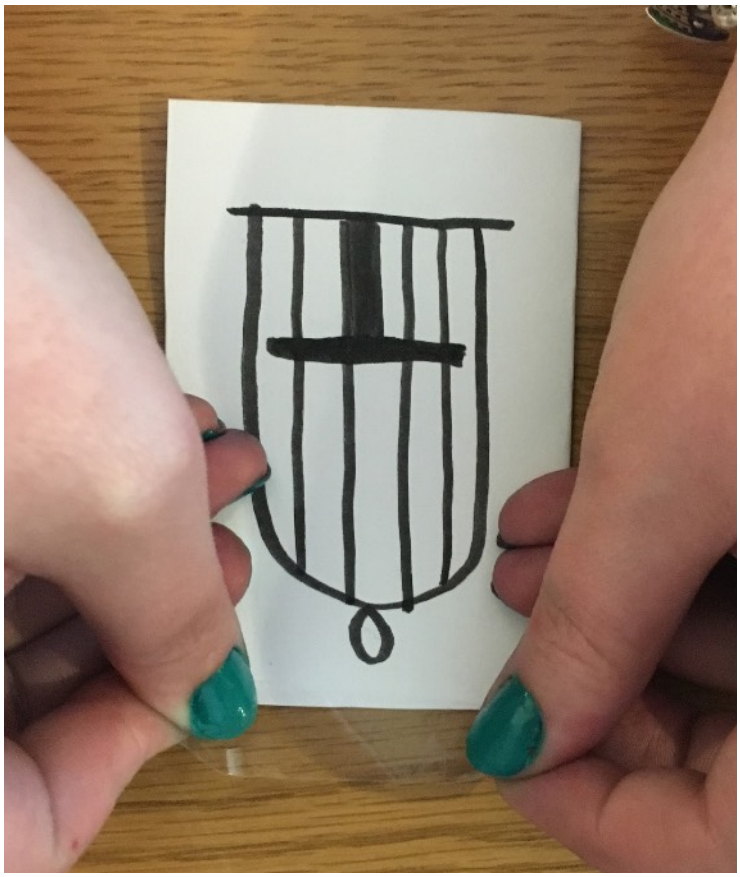

Now to draw your design - we have chosen a bird in a cage you could do flowers in a vase or a dog with a bone or anything you can think of!

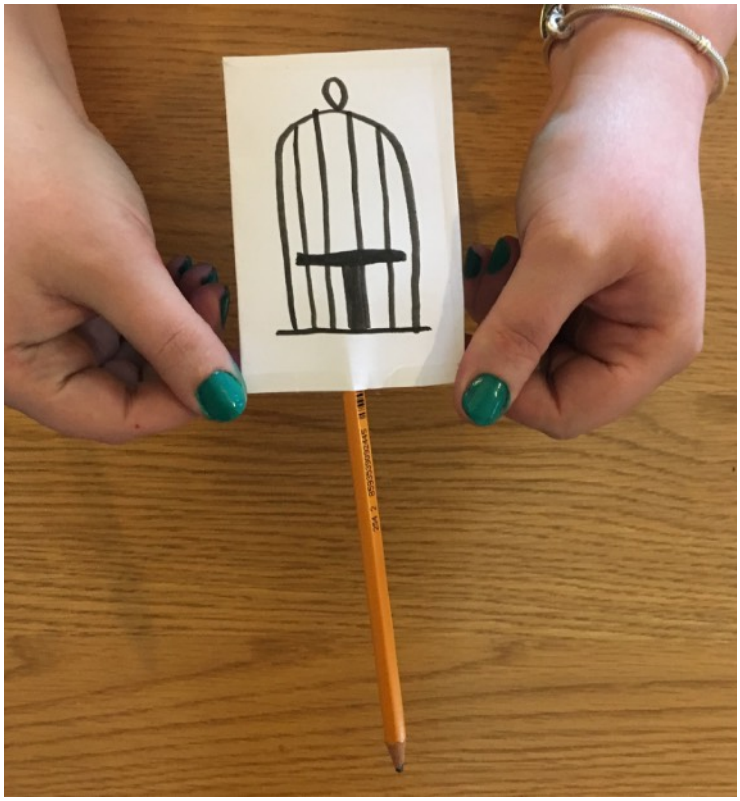

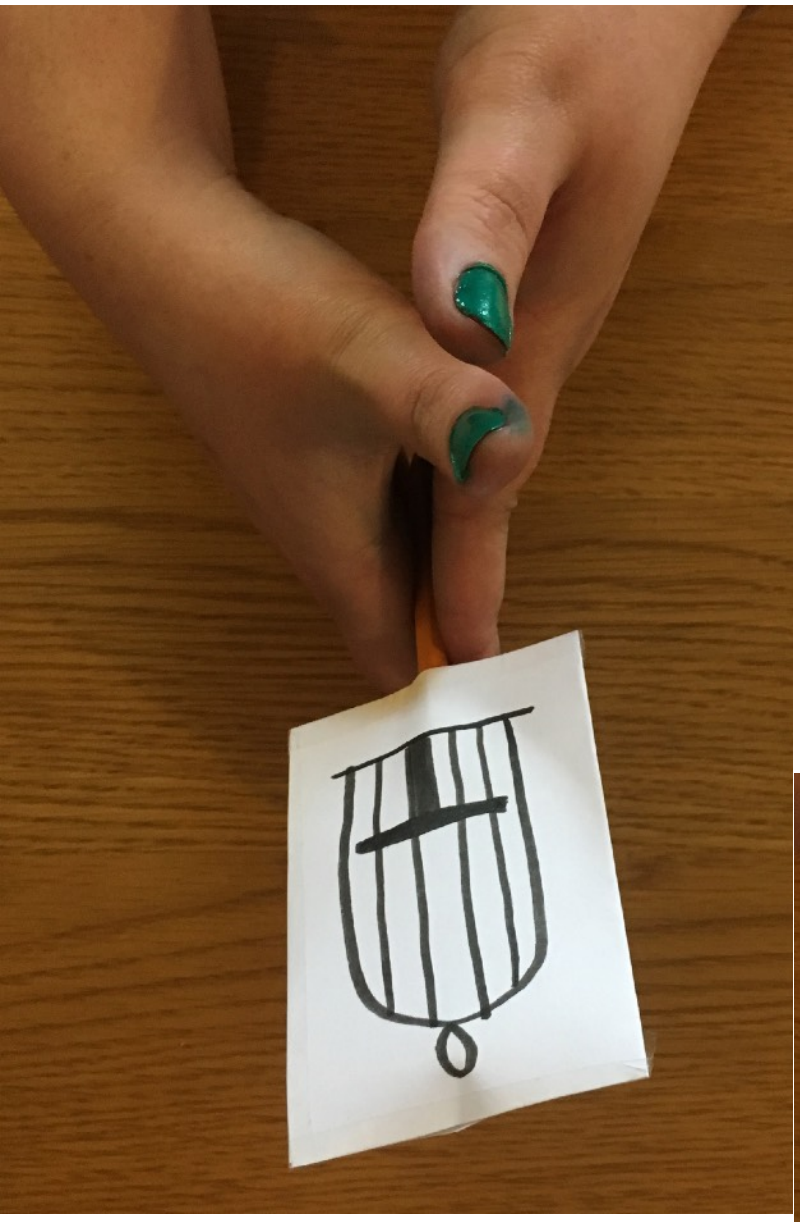

Once you have finished your designs tape the top and the side leaving space at the bottom for the pencil to go

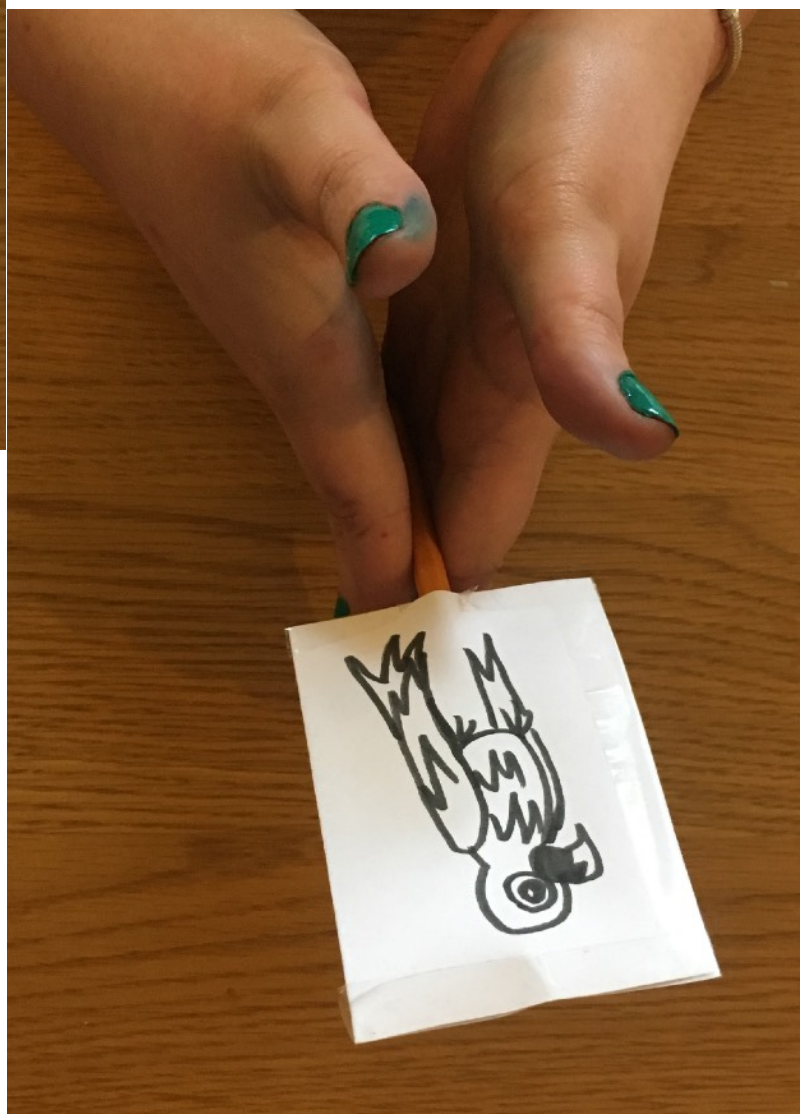

Once the pencil is in tape either side to secure it so it doesn't fall off when you spin it

Putting the pencil between the palms of your hands and roll it fast if you look at the paper you should see the two images join together to make one!

And there you have it your very own Thaumatrope!
