Tissue Paper Tree

This is a fun and tactile way to create a tree with texture and the crispy crunchiness of leaves - great for Spring or Autumn or even just because!

Tools and Materials:

- Tissue Paper
- Paper
- Watercolour
- Water
- Paintbrush
- Gluestick

First of all create the background for your tree, we thought it would be fun to create a sunset with hints of blue and purple too, like a Summery sunset. To make the colours blend more easily together it helps to add water to the paper first then paint your different colour in stripes like so

Leave this to dry - because it is watercolour it will dry pretty quick, 5-10minutes or so. Once it is dry you can paint the body of the tree, the trunk and its branches plus the ground it grows from, like a silhouette

Once that is dry then you can rip up the tissue paper into pieces which you can then scrunch into a ball and then glue it to the tree. Scatter the tissue paper balls around where you think the leaves would be

There you have it your very own “Tissue Paper Tree”!
