CoolitArt

Transition Artwork

This teaching pack enables you to create 2 artworks in one - it looks really effective and gets you thinking! Plus forward planning which is a great skill to develop!

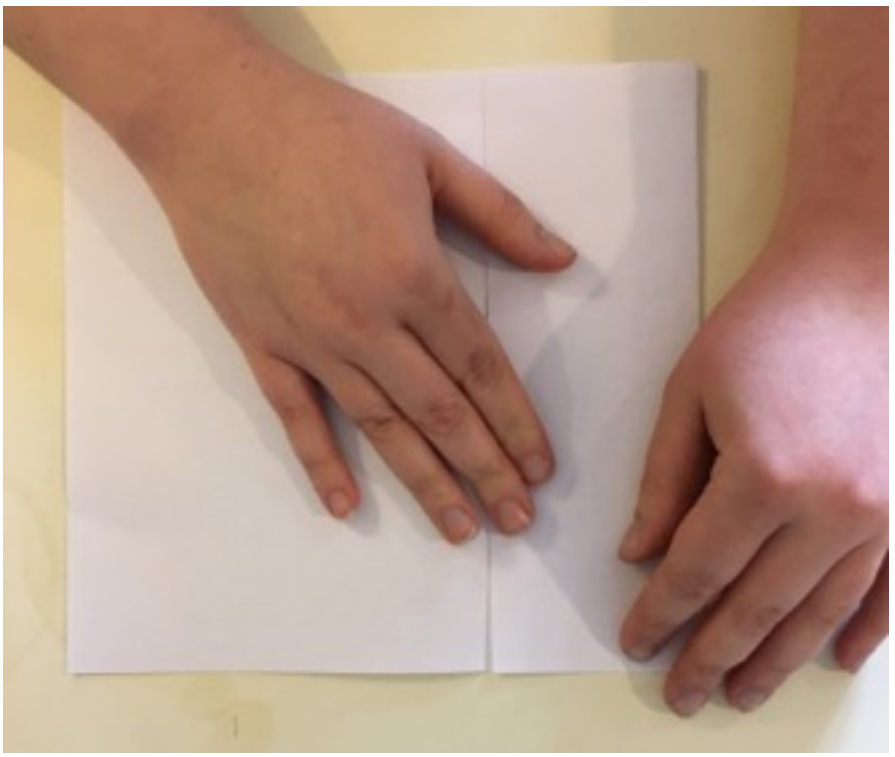

Tools and Materials:

- Paper
- Paintbrush
- Pencil
- Watercolour paints (you can use felt tips instead!)
- Water

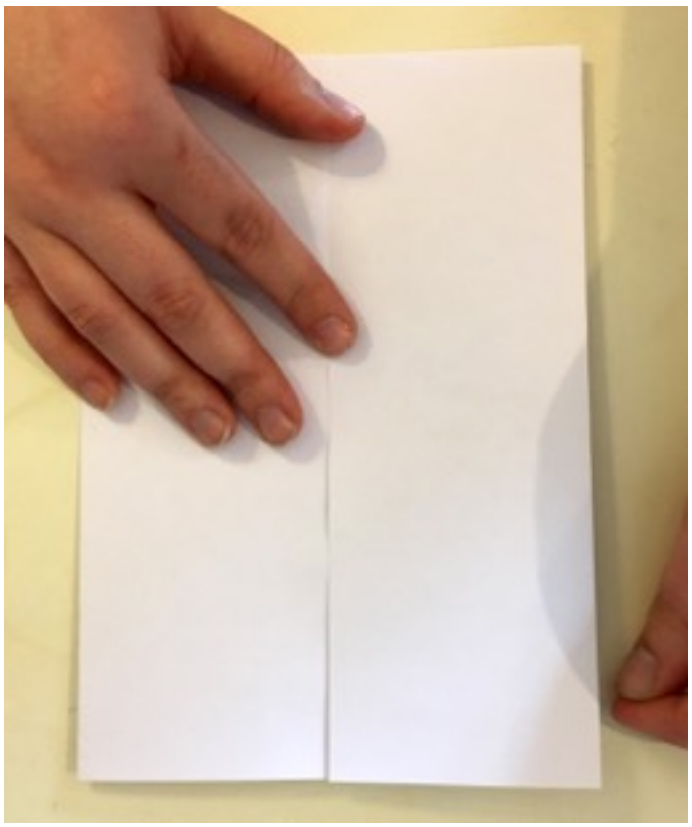

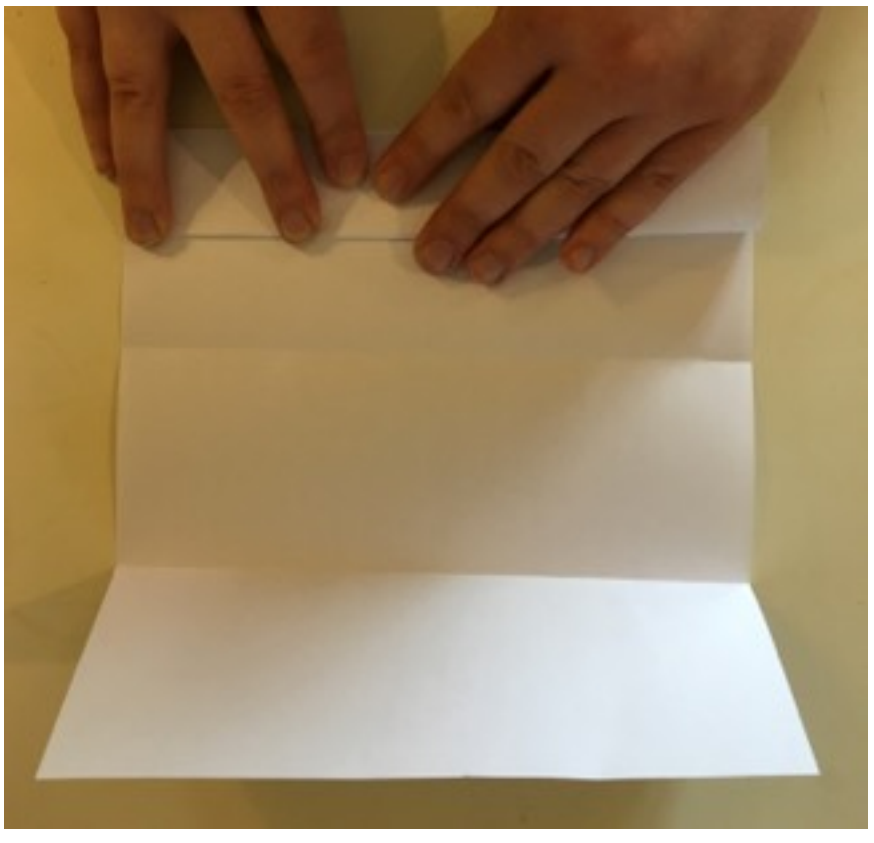

First we need to make our sections - the artwork works by each image having 4 sections - to create this first fold your paper in half like so; open it up and fold the edges into the middle to create folds

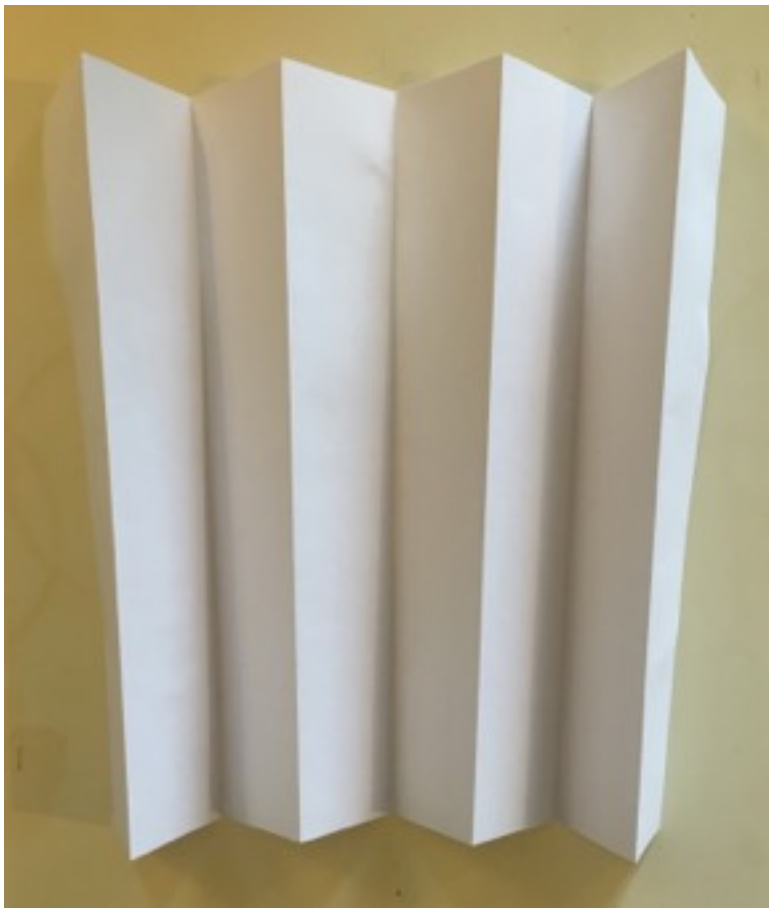

Once you have done that fold those bits in half too - so you end up with 8 segments in total

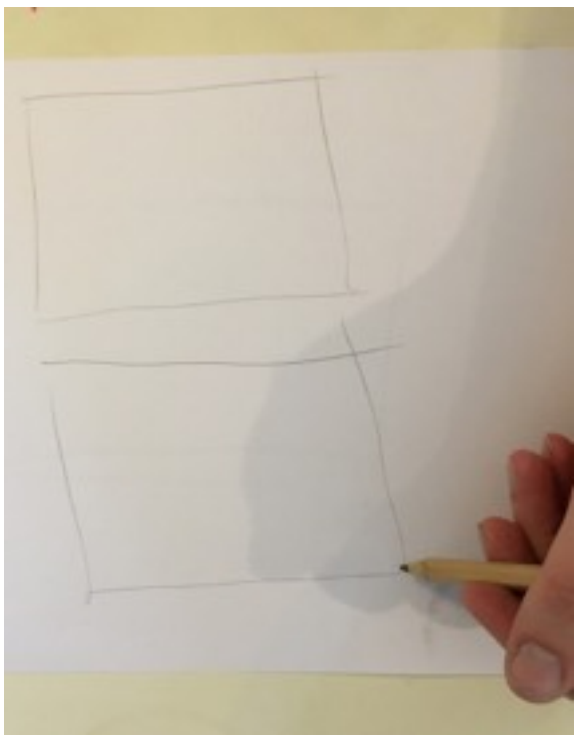

You should end up with your paper looking like this - now all the folding is done you can think about creating your image - what would you like to make?

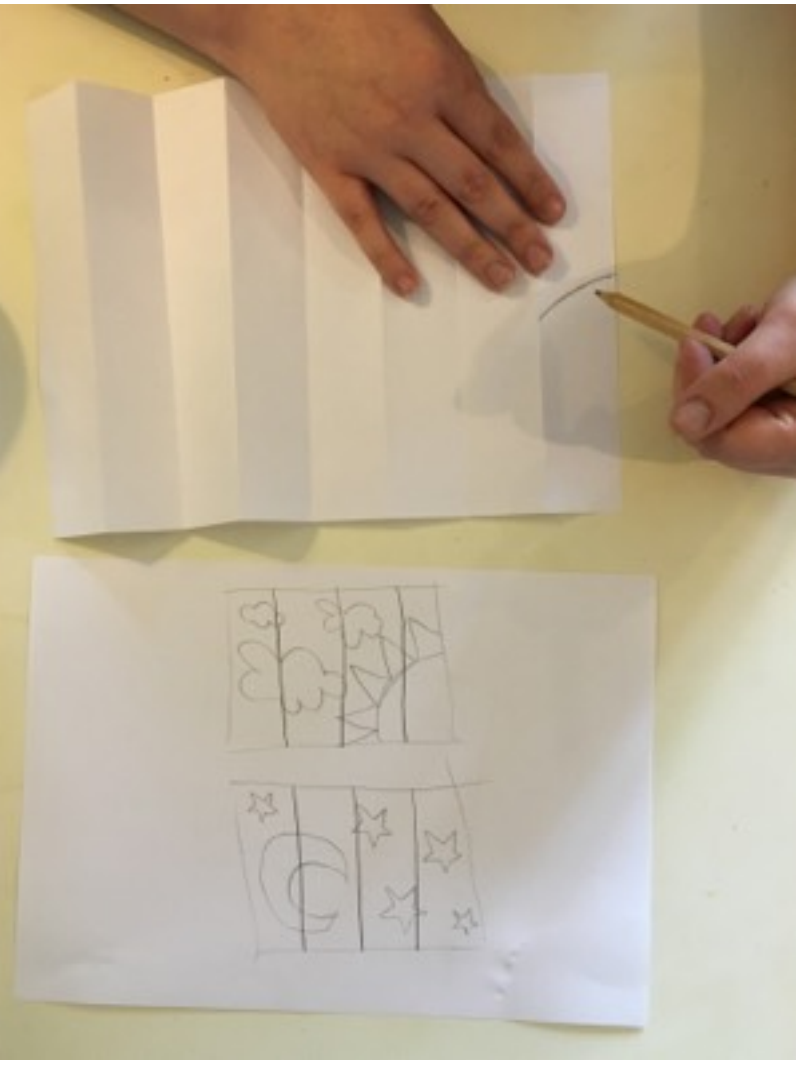

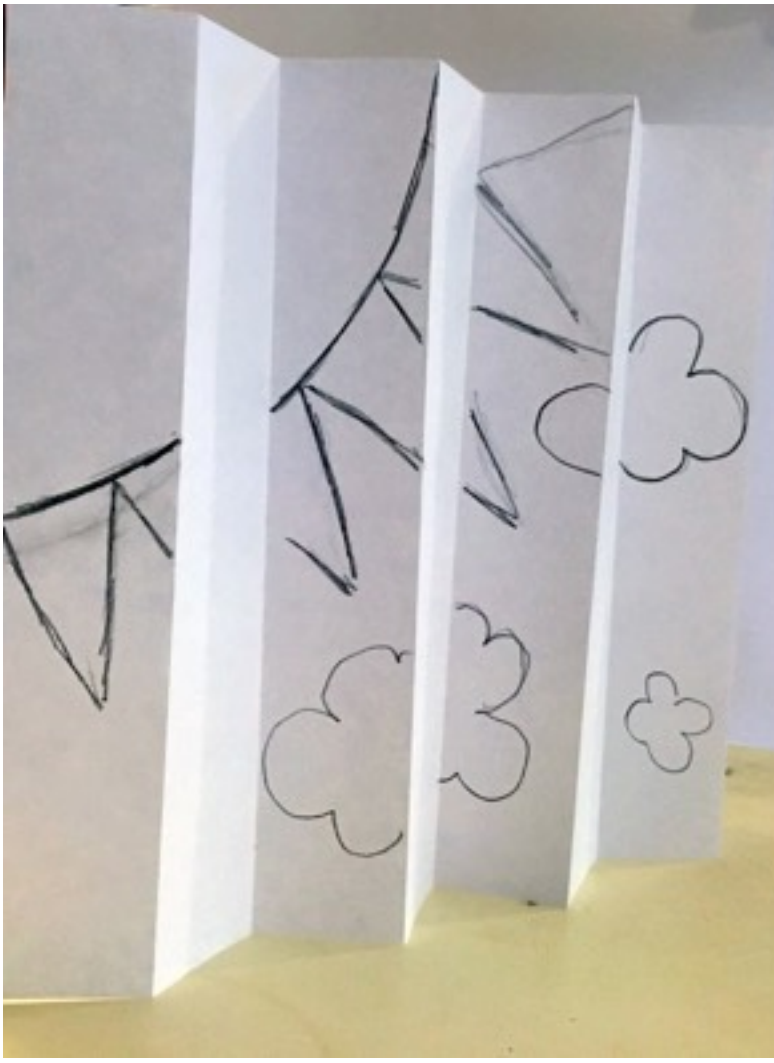

Before jumping in - plan your design out like so; it makes it much easier when you are drawing it on to your paper

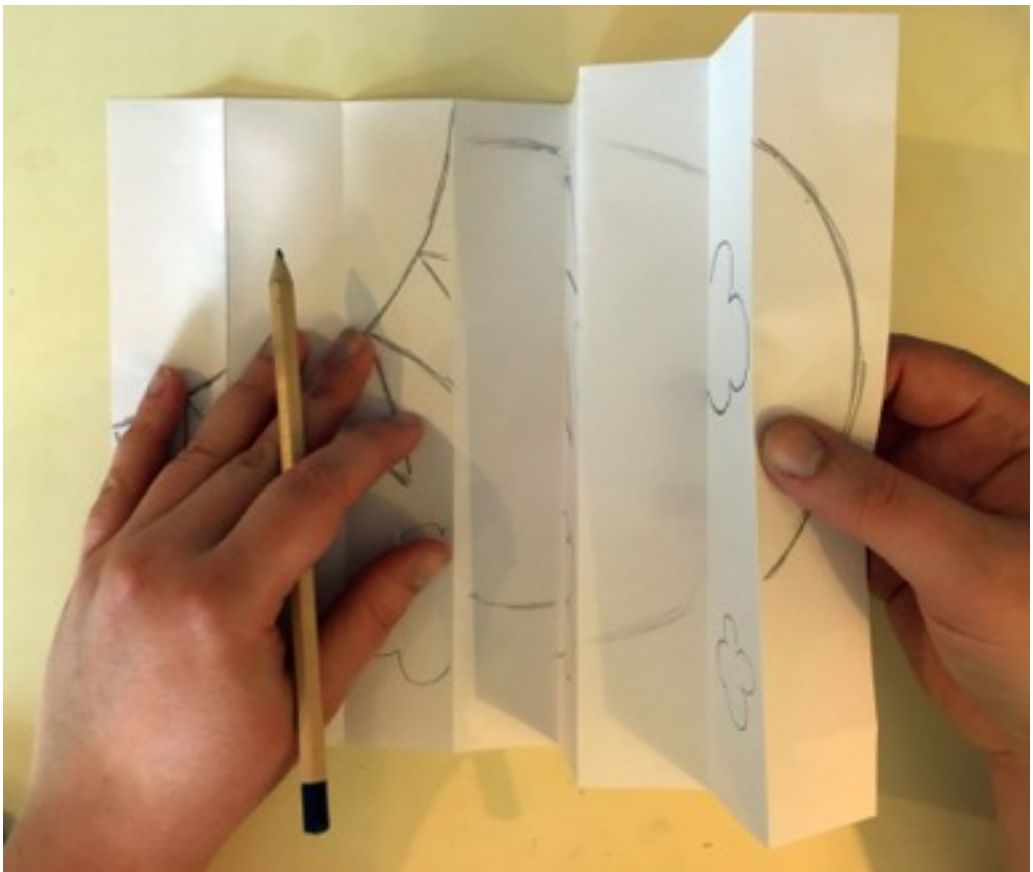

Now you can copy your design on to you paper - doing it section by section like so

Once you are happy with your image you can colour it in

We used watercolours because we love them but felt tips work too!

And there you have it - your own transition artwork!
