Weather Mobile

Using a paper plate why not create this Weather Mobile with a Rainbow to adorn your walls!

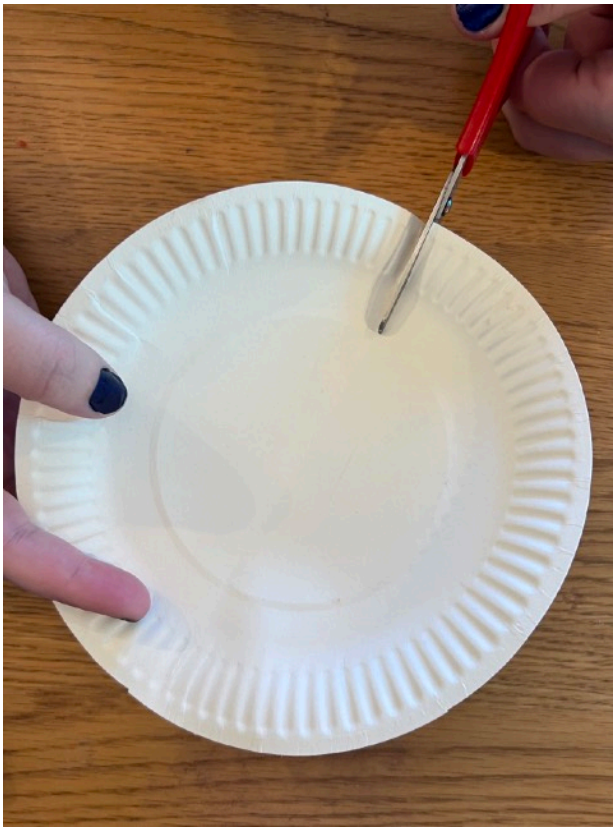

Tools and Materials:

- Paper
- Paper Plate
- Paintbrush
- Scissors
- Watercolour (and Water)
- Sellotape

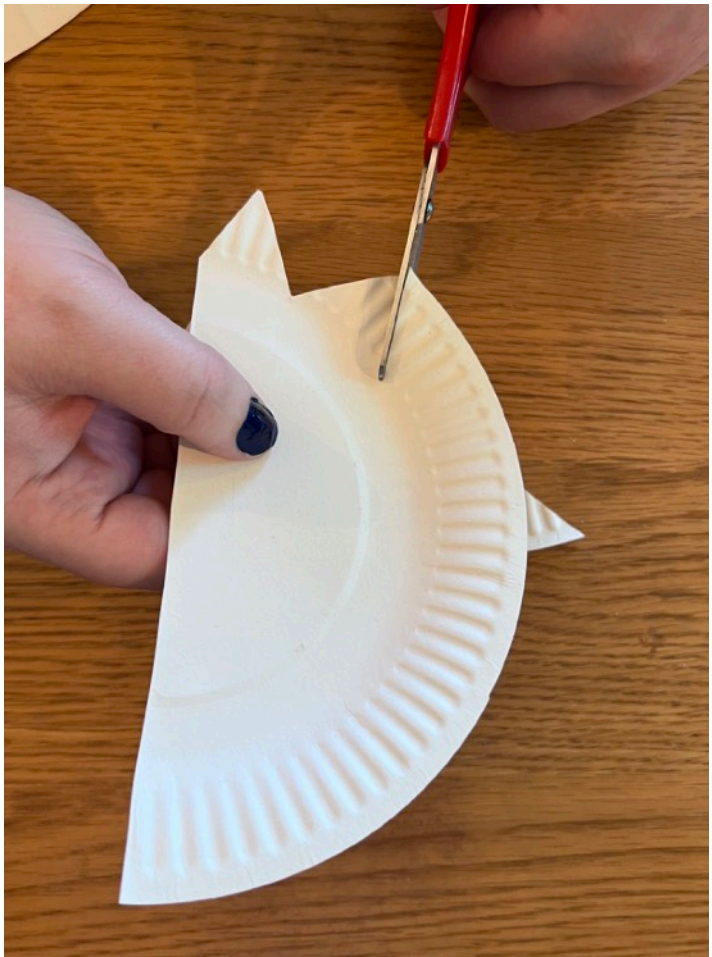

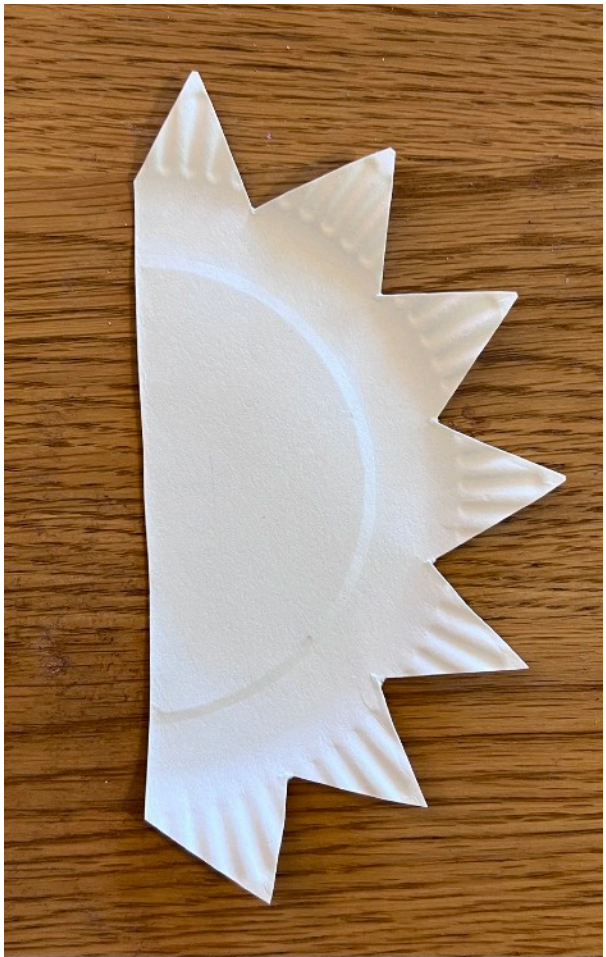

First of all fold your paper plate in half to create 2 semi circles when cut in half for your sun and cloud like so

Then cut triangle into one to create the rays of your sun

With your other half plate create some curved shapes to form your cloud like so

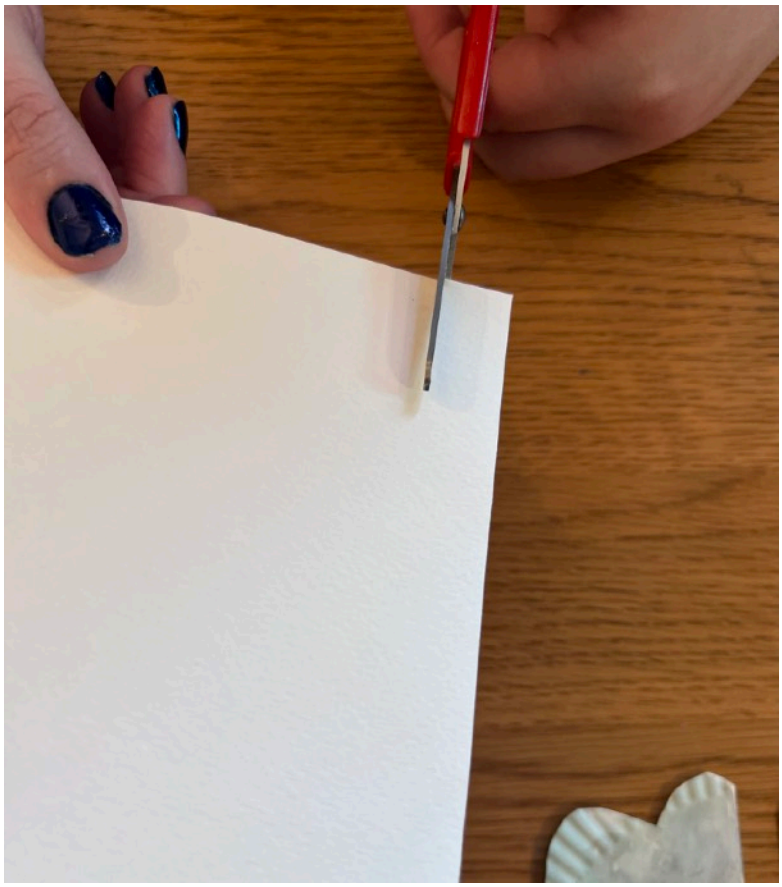

Then you can paint the sun and cloud we went for a bright and bold yellow and a light grey for our cloud

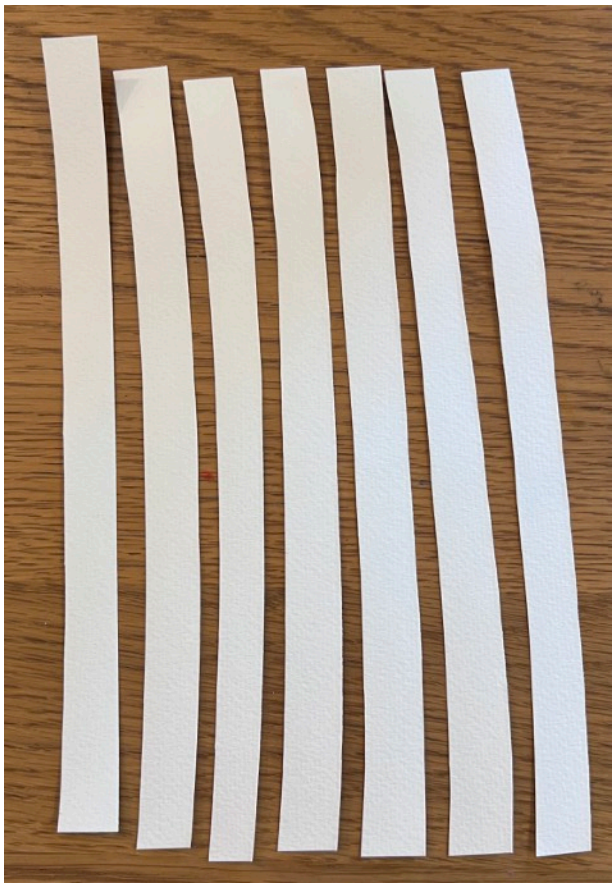

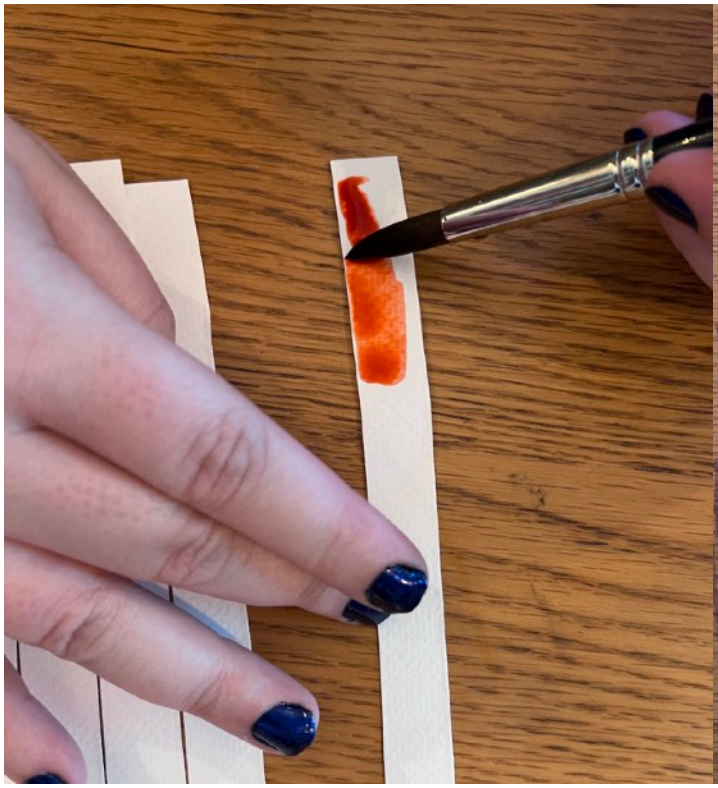

Taking your piece of paper cut 7 strips from it for each colour of the rainbow, and then paint them: Red, Orange, Yellow, Green, Blue, Indigo (Fuchsia), Violet (Purple)

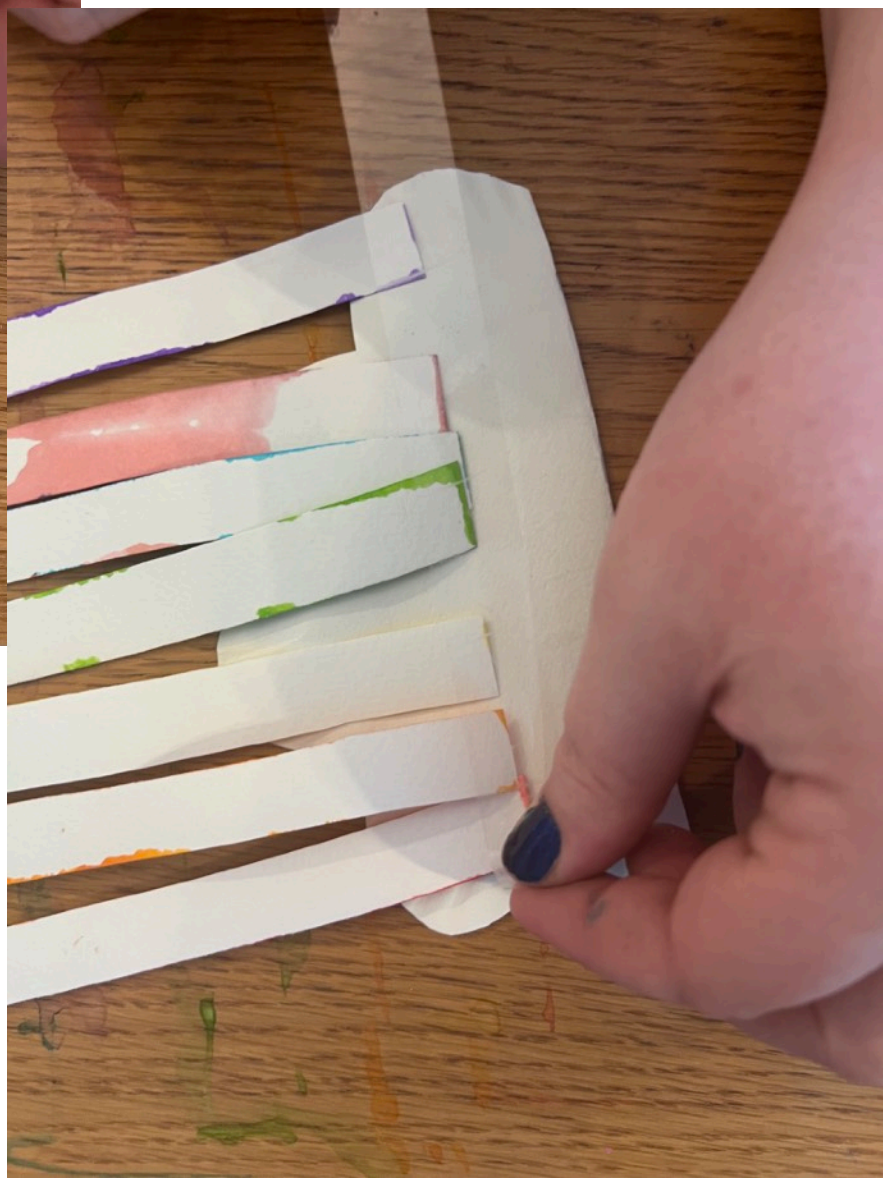

Stick your strips to the back of the sun which is the top of your mobile, sticking them to the flat edge like so. We did our rainbow backwards if you want it the right way you have to lay it out backwards so when it is flipped around it is the right way we cut small bits of tape for this bit. Then attach it to the back of the top of the cloud to fix it in place with tape - we used one long bit to across which we trimmed off the edges after

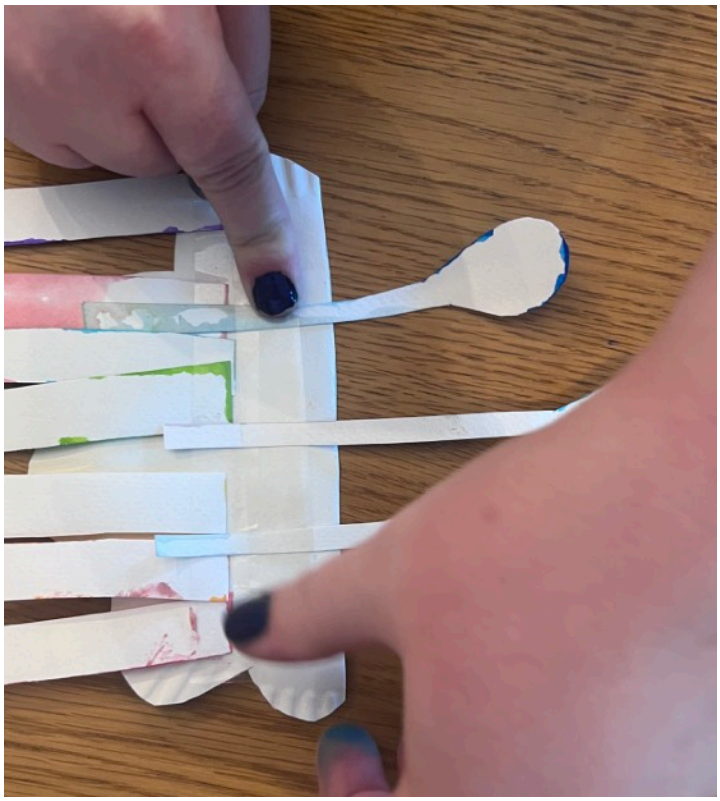

Using more of the paper cut some raindrops with long “tails” to attach to the cloud to look like they are falling. You can cut them different lengths to echo rainfall, paint them when done we did grey on the long bits and different blues on the drops

Then stick to the back of the bottom of the cloud like they are falling from it like so

There you have it your very own “Weather Mobile”!
