Woodland Pop Up

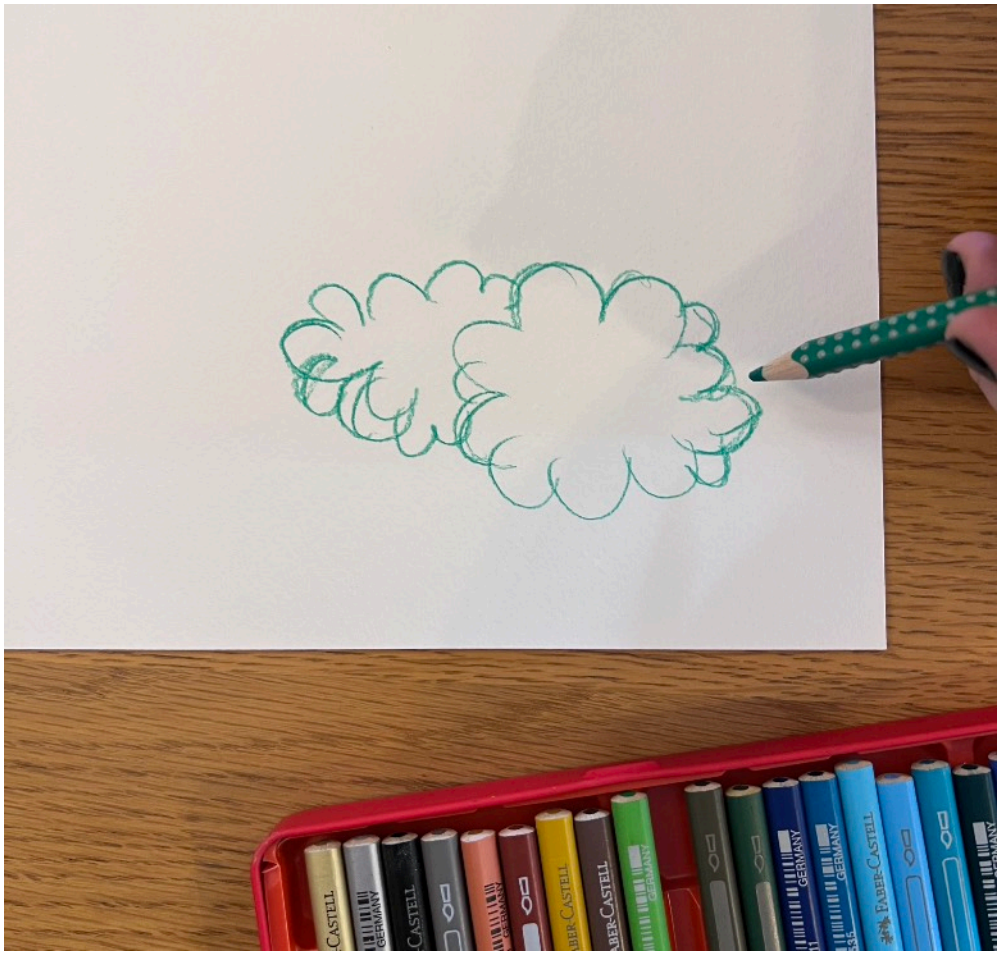

This is a fun craft to create a slightly 3D Woodland scene complete with cute creatures - what animals can you think of to add?

Tools and Materials:

- Paper x 2
- Colouring Pencil
- Sellotape
- Scissors

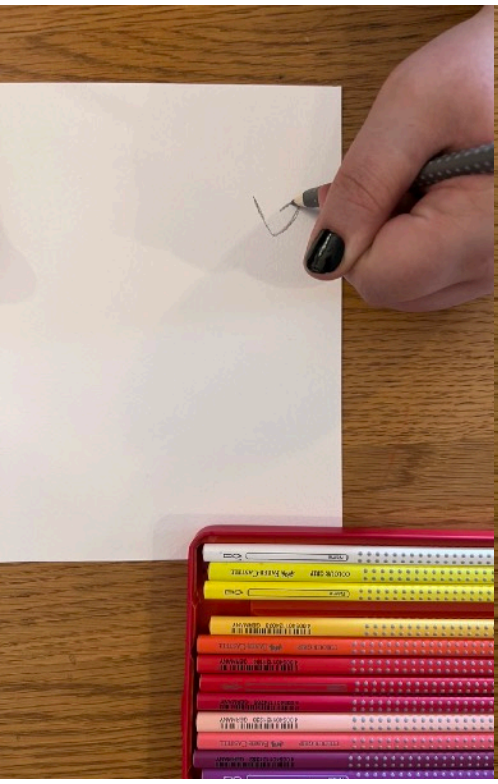

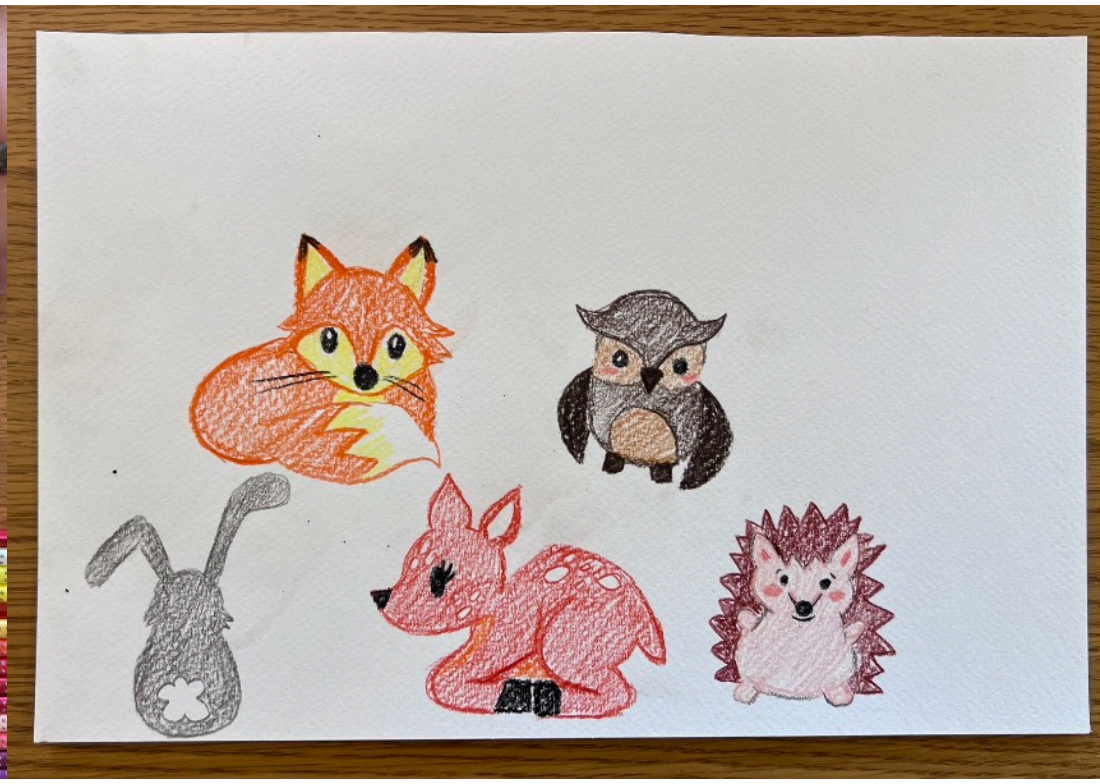

First we are going to create our woodland background - think about how you want it to look, what kind of trees - what shapes are they? What can you draw on different levels to create a balance in the drawing?

Once you are happy with your background then on the other piece of paper you can start to draw and colour in your animals. Make sure there is a gap between them as you need to cut them out afterwards

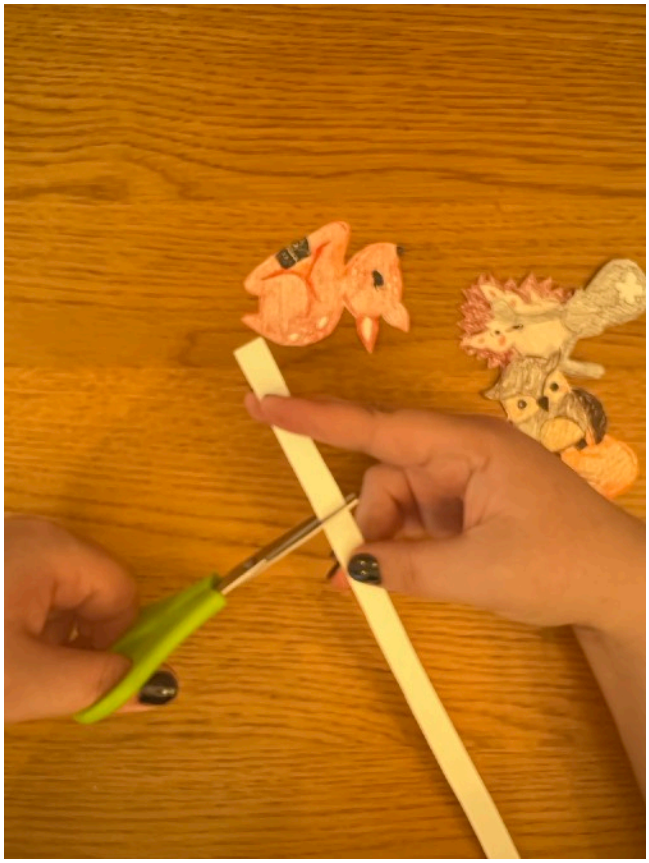

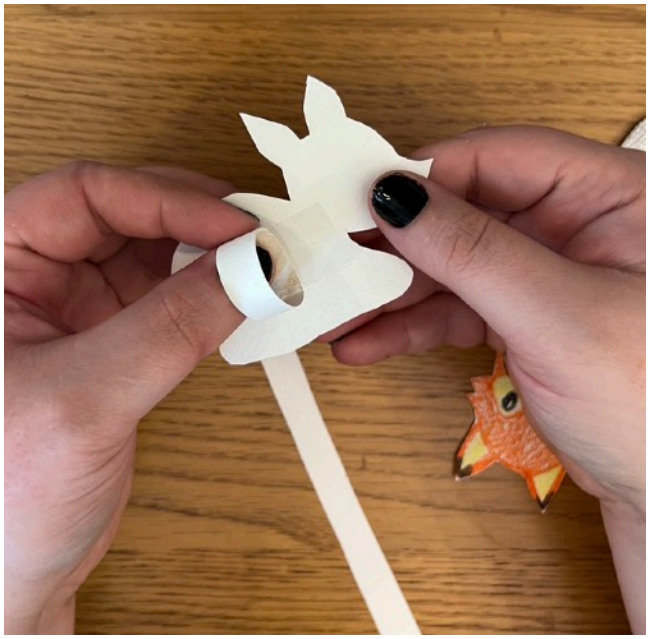

With the rest of the paper left from the animals you can cut strips which we will make loops with to make the animals pop out. The strips should be small as you want them to be able to hide behind but not so small you can’t easily handle them or add tape to them! Cut the strips into smaller sections to bend into loops like so

Once you have all the animals with loops on the back you can start to put on the woodland background. We folded tape in on itself to create another loop like double sided tape or if you want to make it more secure you can pass a straight bit of tape through the paper loop. The other option is you could attach blue tac if you want the animals to continue to be moveable - see what works for you

There you have it your very own “Woodland Pop Up”!

Here is another we made to inspire you!
