“Dream Catcher”

With this teaching pack you can learn to create your very own dreamcatcher - why not make one for your room?

Tools and Materials:

- Hole Punch
- Paper Plate
- Beads
- Sticky Gems
- Scissors
- String

Gently fold your paper plate over - don't bend it fully as you don't want any creases, start to cut out the middle section. Open it back up to neaten the circle

Your plate should end up looking like this

Now you can start to make holes in it where you want to thread the string through like so

Now you can start threading, don't worry too much about where you thread through - there is no set pattern and if you don't like a bit you can always unthread it!

Now time to decorate! Because we are using a metallic plate we can't draw on our but if you are using a white plate why not draw some patterns on it instead. We are using stick on gems to make it more interesting

Now you want to put a hole up the top to thread string to hang it - and three holes at the bottom to add more decoration to!

Cut some string to loop at the top of your dream catcher

Pull both ends through to create a loop then thread the two loose ends through to make it more secure, tie it off at the top of the plate and then knot at the loose ends

Now cut some more string for the decorations at the bottom, three equal length strings like so

Tie the strings to the bottom and then start threading beads on to them - tie the string at the bottom under the beads to make sure they don't fall off!

Trim off any excess string up the top to make it neater

There you have it your very own Dream Catcher!

Here is another we made to give you inspiration!
