Juice Carton Bird Feeder

What better way to reuse empty juice cartons by transforming them into bird feeders! - upcycling and looking after nature at the same time!

Tools and Materials:

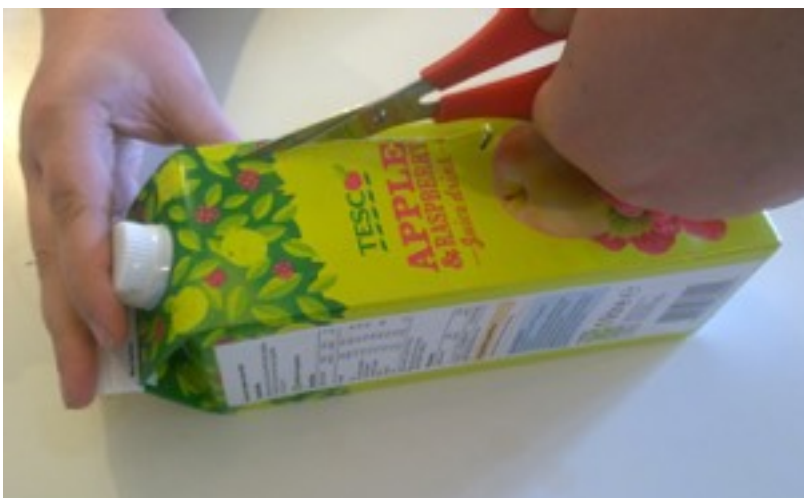

- Empty clean juice carton
- PVA glue
- Magazine
- Paintbrush
- Scissors
- String

First we need to make a hole in the juice carton - it doesn't matter too much which side we just did it with the nozzle side up for presentation we thought it looked better!

Once you have made the hole cut along to create a rectangle to cut out - so the birds can get in!

Now the fun bit! Decorating - choose pictures you like from the magazines and cut them out

Then you can start glueing them on like so

If you coat the top of your magazine images with PVA it makes it waterproof - which is a must with the amount of rain we get here in England!

Now all you need to do is thread your string through - take the lid off, fold the string and thread it through to make a loop, thread both loose ends through to secure it. Tie the loose end together and screw the lid back on.

There you have it your own Juice Carton Bird Feeder - you just need to add birdseed!
