

Embossed Foil

This is a really simple way to create almost intricate metal work found in many different cultures using just some kitchen foil and a soft pencil so it doesn't get ripped!

Tools and Materials:

- Kitchen Foil
- Pencil (HB or softer)

Pencils are marked from soft to hard, HB is the middle type of pencil but they can go from (super soft) 8B - 9H (hardest pencil)

This is a very simple craft - drawing with the pencil, gently so you don't rip the foil will create an impressions when you flip it over to the other side. It is great to create mandalas with and you could even create ornate "metal hinges" for a treasure chest, book or gift as you could cut it out and gently stick it on to something else.

There you have it your very own “Embossed Foil”
